(8.) A *feoffment* is the transfer of any *corporeal* hereditament to another, perfected by *livery of seisin*, or delivery of bodily possession from the feoffer to the feoffee; without which no freehold estate therein can be created at common law.

(9.) A *gift* is properly the conveyance of lands in tail.

(10.) A *grant* is the regular method, by common law, of conveying *incorporeal* hereditaments.

(11.) A *lease* is the demise, granting, or letting to farm of any tenement, usually for a less term than the lessor hath therein; yet sometimes possibly for a greater; according to the regulations of the restraining and enabling statutes.

(12.) An *exchange* is the mutual conveyance of equal interests, the one in consideration of the other.

(13.) A *partition* is the division of an estate held in joint tenancy, in coparcenary, or in common, between the respective tenants; so that each may hold his distinct part in severalty.

(14.) A *release* is the discharge or conveyance of a man's right, in lands and tenements, to another that hath some former estate in possession therein.

(15.) A *confirmation* is the conveyance of an estate or right *in esse*, whereby a voidable estate is made sure, or a particular estate is increased.

(16.) A .

Law of
England
Epitomised.

(16.) A *surrender* is the yielding up of an estate for life, or years, to him that hath the immediate remainder or reversion; wherein the particular estate may merge.

(17.) An *assignment* is the transfer, or making over to another, of the whole right one has in any estate; but usually in a lease, for life or years.

(18.) A *defeazance* is a collateral deed, made at the same time with the original conveyance; containing some condition, upon which the estate may be defeated.

(19.) Conveyances by *statute* depend much on the doctrine of *uses* and *trusts*: which are a confidence reposed in the *terre tenant*, or tenant of the land, that he shall permit the profits to be enjoyed, according to the directions of *cestuy que use*, or *cestuy que trust*.

(20.) The statute of uses, having transferred all uses into actual possession, (or, rather, having drawn the possession to the use,) has given birth to divers other species of conveyance: 1. A *covenant* to stand seized to use. 2. A *bargain and sale* enrolled. 3. A *lease and release*. 4. A deed to *lead or declare* the use of other more direct conveyances. 5. A *revocation of uses*; being the execution of a power, reserved at the creation of the use, of recalling at a future time the use or estate so creating. All which owe their present operation principally to the statute of uses.

(21.) Deeds which are used not to convey, but only to charge real property, and discharge it, are, 1. *Obligations*. 2. *Recognizances*. 3. *Defeazances* upon both.

SECT. XXI. Of Alienation by matter of Record.

lxxxiii.

(1.) Assurances by matter of record are where the sanction of some court of record is called in, to substantiate and witness the transfer of real property. These are, 1. *Private acts of parliament*. 2. The *king's grants*. 3. *Fines*. 4. *Common recoveries*.

(2.) *Private acts of parliament* are a species of assurances, calculated to give (by the transcendent authority of parliament) such reasonable powers or relief as are beyond the reach of the ordinary course of law.

(3.) The *king's grants*, contained in charters or letters patent, are all entered on record, for the dignity of the royal person, and security of the royal revenue.

(4.) A *fine* (sometimes said to be a feoffment of record) is an amicable composition and agreement of an actual, or fictitious, suit; whereby the estate in question is acknowledged to be the right of one of the parties.

(5.) The *parts* of a fine are, 1. The writ of covenant. 2. The license to agree. 3. The concord. 4. The note. 5. The foot. To which the statute hath added, 6. Proclamations.

(6.) Fines are of four kinds: *Sur cognizance de droit, come ceo que il ad de son done*. 2. *Sur cognizance de droit tantum*. 3. *Sur concessit*. 4. *Sur done, grant, et render*; which is a double fine.

(7.) The *force* and *effect* of fines (when levied by such as have themselves any interest in the estate) are to assure the lands in question to the cognizee, by barring the respective rights of parties, privies, and strangers.

I

(8.) A common *recovery* is by an actual, or fictitious, suit or action for land, brought against the tenant of the freehold; who thereupon vouches another, who undertakes to warrant the tenant's title: but, upon such vouchee's making default, the land is *recovered* by judgement at law against the tenant; who, in return obtains judgement against the vouchee to recover lands of equal value in recompense.

(9.) The *force* and *effect* of a recovery are to assure lands to the recoverer, by barring estates tail, and all remainders and reversions expectant thereon; provided the tenant in tail either suffers, or is vouched in, such recovery.

(10.) The *uses* of a fine or recovery may be directed by, 1. Deeds to *lead* such uses; which are made previous to the levying or suffering them. 2. Deeds to *declare* the uses; which are made subsequent.

SECT. XXII. Of Alienation by Special Custom.

(1.) Assurances by special *custom* are confined to the transfer of *copyhold* estates.

(2.) This is effected by, 1. *Surrender* by the tenant into the hands of the lord to the use of another, according to the custom of the manor. 2. *Presentment*, by the tenants or homage, of such surrender. 3. *Admittance* of the surrenderee by the lord, according to the uses expressed in such surrender.

(3.) *Admittance* may also be had upon original *grants* to the tenant from the lord, and upon *descents* to the heir from the ancestor.

SECT. XXIII. Of Alienation by Devise.

(1.) Devise is a disposition of lands and tenements, contained in the last will and testament of the owner.

(2.) This was not permitted by the common law, as it stood since the conquest; but was introduced by the statute law, under Henry VIII. since made more universal by the statute of tenures under Charles II. with the introduction of additional solemnities by the statute of frauds and perjuries in the same reign.

(3.) The *construction* of all common assurances should be, 1. Agreeable to the intention. 2. To the words of the parties. 3. Made upon the entire deed. 4. Bearing strongest against the contractor. 5. Conformable to law. 6. Rejecting the latter of two totally repugnant clauses in a deed, and the former in a will. 7. Most favourable in a case of devise.

SECT. XXIV. Of Things Personal.

(1.) Things *personal* are comprehended under the general name of *chattels*; which includes whatever wants either the duration, or the immobility, attending things real.

(2.) In these are to be considered, 1. Their *distribution*. 2. The *property* of them. 3. The *title* to that property.

(3.) As to the *distribution* of chattels, they are, 1. *Chattels real*. 2. *Chattels personal*.

(4.) *Chattels real* are such quantities of interest, in things *immovable*, as are short of the duration of freeholds; being limited to a time certain, beyond which they cannot subsist. (See Sect. 7.)

(5) Chattels

Law of England Epitomized

Law of England Epitomized.

(5.) Chattels *personal* are things *moveable*; which may be transferred from place to place, together with the person of the owner.

SECT. XXVIII. *Of Title by Custom.*

xc.

(1.) By *custom*, obtaining in particular places, a right may be acquired in chattels; the most usual of which customs are those relating to, 1. *Heriots*. 2. *Mortuaries*. 3. *Heir looms*.

(2.) *Heriots* are either *heriot service*, which differs little from a rent; or *heriot custom*, which is a customary tribute, of goods and chattels, payable to the lord of the fee on the decease of the owner of lands.

(3.) *Mortuaries* are a customary gift, due to the minister in many parishes, on the death of his parishioners.

(4.) *Heir looms* are such personal chattels, as descend by special custom to the heir, along with the inheritance of his ancestor.

SECT. XXIX. *Of Title by Succession, Marriage, and Judgement.*

(1.) By *succession* the right of chattels is vested in corporations *aggregate*; and likewise in such corporations *sole* as are the heads and representatives of bodies *aggregate*.

xc.

(2.) By *marriage* the chattels real and personal of the wife are vested in the husband, in the same degree of property, and with the same powers, as the wife when sole had over them; provided he reduces them to possession.

(3.) The wife also acquires, by marriage, a property in her own *paraphernalia*.

(4.) By *judgement*, consequent on a suit at law, a man may in some cases, not only *recover*, but originally *acquire*, a right to personal property. As, 1. To penalties recoverable by action popular. 2. To damages. 3. To costs of suit.

SECT. XXX. *Of Title by Gift, Grant, and Contract.*

(1.) A *gift*, or *grant*, is a voluntary conveyance of a chattel personal in possession, without any consideration or equivalent.

xcii.

(2.) A *contract* is an agreement, upon sufficient consideration, to do or not to do a particular thing: and, by such contract, any personal property (either in possession or in action) may be transferred.

(3.) Contracts may either be express or implied; either executed or executory.

(4.) The *consideration* of contracts is, 1. A good consideration. 2. A valuable consideration; which is, 1. *Do, ut des*. 2. *Facio, ut facias*. 3. *Facio, ut des*. 4. *Do, ut facias*.

(5.) The most usual *species* of personal contracts are, 1. *Sale or exchange*. 2. *Bailment*. 3. *Hiring or borrowing*. 4. *Debt*.

(6.) *Sale or exchange* is a transmutation of property from one man to another, in consideration of some recompense in value.

(7.) *Bailment* is the delivery of goods in trust; upon a contract, express or implied, that the trust shall be faithfully performed by the bailee.

(8.) *Hiring or borrowing* is a contract, whereby the

SECT. XXV. *Of Property in Things Personal.*

(1.) Property, in chattels personal, is either in *possession*, or in *action*.

(2.) Property in *possession*, where a man has the actual enjoyment of the thing, is, 1. *Absolute*. 2. *Qualified*.

(3.) *Absolute* property is where a man has such an exclusive right in the thing, that it cannot cease to be his, without his own act or default.

(4.) *Qualified* property is such as is not, in its nature, permanent; but may sometimes subsist, and at other times not subsist.

(5.) This may arise, 1. Where the subject is incapable of absolute ownership. 2. From the peculiar circumstances of the owners.

(6.) Property in *action*, is where a man hath not the actual *occupation* of the thing; but only a *right* to it, arising upon some contract, and recoverable by an action at law.

(7.) The property of chattels personal is liable to remainders, expectant on estates for life; to joint tenancy; and to tenancy in common.

SECT. XXVI. *Of Title to Things Personal by Occupancy.*

(1.) The *title* to things personal may be acquired or lost by, 1. *Occupancy*. 2. *Prerogative*. 3. *Forfeiture*. 4. *Custom*. 5. *Succession*. 6. *Marriage*. 7. *Judgement*. 8. *Gift*, or *grant*. 9. *Contract*. 10. *Bankruptcy*. 11. *Testament*. 12. *Administration*.

(2.) Occupancy still gives the first occupant a right to those few things which have no legal owner, or which are incapable of permanent ownership. Such as, 1. Goods of alien enemies. 2. Things found. 3. The benefit of the elements. 4. Animals *feræ naturæ*. 5. Emblements. 6. Things gained by accession; or, 7. By confusion. 8. Literary property.

SECT. XXVII. *Of Title by Prerogative, and Forfeiture.*

(1.) By *prerogative* is vested in the crown, or its granters, the property of the royal revenue, (see Chap. I. Sect. 8.); and also the property of all game in the kingdom, with the right of pursuing and taking it.

(2.) By *forfeiture*, for crimes and misdemeanors, the right of goods and chattels may be transferred from one man to another; either in part or totally.

(3.) Total forfeitures of goods arise from conviction of, 1. Treason, and misprison thereof. 2. Felony. 3. Excusable homicide. 4. Outlawry for treason or felony. 5. Flight. 6. Standing mute. 7. Assaults on a judge; and batteries, sitting the courts. 8. *Præmunire*. 9. Pretended prophecies. 10. Owling. 11. Residing abroad of artificers. 12. Challenges to fight, for debts at play.

Law of
England
Epitome

possession of chattels is transferred for a particular time, on condition that the identical goods (or sometimes their value) be restored at the time appointed, together with (in case of *living*) a stipend or price for the use.

(9.) This price, being calculated to answer the hazard as well as inconvenience of lending, gives birth to the doctrine of *interest*, or *usury*, upon loans; and, consequently, to the doctrine of *bottomry* or *respondentia*, and *insurance*.

(10.) *Debt* is any contract, whereby a certain sum of *money* becomes due to the creditor. This is, 1. A debt of *record*. 2. A debt upon *special* contract. 3. A debt upon *simple* contract; which last includes paper credit, or bills of exchange, and promissory notes.

SECT. XXXI. Of Title by Bankruptcy.

xciii

(1.) Bankruptcy (as defined in Sect. 18.) is the act of becoming a bankrupt.

(2.) Herein may be considered, 1. Who may become a bankrupt. 2. The *acts* whereby he may become a bankrupt. 3. The *proceedings* on a commission of bankrupt. 4. How his *property* is transferred thereby.

(3.) Persons of full age, *using* the *trade* of merchandise, by buying, and selling, and seeking their livelihood thereby, are liable to become bankrupts; for debts of a sufficient amount.

(4.) A trader, who endeavours to avoid his creditors, or evade their just demands, by any of the ways specified in the several statutes of bankruptcy, doth thereby commit an *act* of bankruptcy.

(5.) The *proceedings* on a commission of bankrupt, so far as they affect the bankrupt himself, are principally by, 1. Petition. 2. Commission. 3. Declaration of bankruptcy. 4. Choice of assignees. 5. The bankrupt's surrender. 6. His examination. 7. His discovery. 8. His certificate. 9. His allowance. 10. His indemnity.

(6.) The *property* of a bankrupt's personal estate is, immediately upon the act of bankruptcy, vested by construction of law in the assignees; and they, when they have collected, distribute the whole by equal dividends among all the creditors.

SECT. XXXII. Of Title by Testament, and Administration.

xciv.

(1.) Concerning *testaments* and *administrations*, considered jointly, are to be observed, 1. Their *original* and *antiquity*. 2. *Who* may make a testament. 3. Its *nature* and *incidents*. 4. What are *executors* and *administrators*. 5. Their *office* and *duty*.

(2.) *Testaments* have subsisted in England immemorially; whereby the deceased was at liberty to dispose of his personal estate, reserving anciently to his wife and children their *reasonable part* of his effects.

(3.) The goods of *intestates* belonged anciently to the king; who granted them to the prelates to be disposed in pious uses; but, on their abuse of this trust in the times of Popery, the legislature compelled them to delegate their power to *administrators* expressly provided by law.

(4.) *All* persons may make a testament unless dis-

abled by, 1. Want of discretion. 2. Want of free will. 3. Criminal conduct.

(5.) *Testaments* are the legal declaration of a man's intentions, which he wills to be performed after his death. These are, 1. Written. 2. Nuncupative.

(6.) An *executor* is he, to whom a man by his will commits the execution thereof.

(7.) *Administrators* are, 1. *Durante minore etate* of an infant executor or administrator; or *durante absentia*; or *pendente lite*. 2. *Cum testamento annexo*; when no executor is named, or the executor refuses to act. 3. General administrators; in pursuance of the statutes of Edward III. and Henry VIII. 4. Administrators *de bonis non*; when a former executor or administrator dies without completing his trust.

(8.) The *office* and *duty* of executors (and, in many points, of administrators also) are, 1. To bury the deceased. 2. To prove the will, or take out administration. 3. To make an inventory. 4. To collect the goods and chattels. 5. To pay debts; observing the rules of priority. 6. To pay legacies, either general or specific; if they be vested, and not lapsed. 7. To distribute the undivided surplus, according to the statute of distributions.

CHAP. III. Of PRIVATE WRONGS.

SECT. I. Of the Redress of Private Wrongs, by the mere Act of the Parties.

(1.) WRONGS are the privation of *right*; and are, 1. *Private*. 2. *Public*.

(2.) *Private wrongs*, or *civil injuries*, are an infringement, or privation, of the civil rights of individuals, considered as individuals.

(3.) The *redress* of civil injuries is one principal object of the laws of England.

(4.) This *redress* is effected, 1. By the mere *act* of the parties. 2. By the mere *operation of law*. 3. By *both* together, or *suit in courts*.

(5.) *Redress*, by the mere *act* of the parties, is that which arises, 1. From the *sole* act of the party injured. 2. From the *joint* act of the parties.

(6.) Of the first sort are, 1. Defence of one's self, or relations. 2. Recaption of goods. 3. Entry on lands and tenements. 4. Abatement of nuisances. 5. Distress; for rent, for suit or service, for amercements, for damage, or for divers statutable penalties; made of such things only as are legally distrainable; —and taken and disposed of according to the due course of law. 6. Seizing of heriots, &c.

(7.) Of the second sort are, 1. Accord. 2. Arbitration.

SECT. II. Of Redress by the mere Operation of Law.

Redress, effected by the mere *operation of law*, is, 1. In the case of *retainer*; where a creditor is executor or administrator, and is thereupon allowed to retain his own debt. 2. In the case of *remitter*; where one, who has a *good* title to lands, &c. comes into possession by a *bad* one, and is thereupon remitted to his ancient good title, which protects his ill-acquired possession.

SECT.

Law of
England
continued.

Law of
England
Epitomised

SECT. III. *Of Courts in General.*

xcvii. (1.) Redress, that is effected by the *act* both of law and of the *parties*, is by *suit* or *action* in the *courts* of justice.

(2.) Herein may be considered, 1. The *courts* themselves. 2. The *cognizance* of wrongs or injuries therein. And, of *courts*, 1. Their *nature* and *incidents*. 2. Their several *species*.

(3.) A *court* is a place wherein justice is judicially administered, by officers delegated by the crown; being a court either of record, or not of record.

(4.) *Incident* to all courts are a plaintiff, defendant, and judge: and, with us, there are also usually attorneys; and advocates or counsel, viz. either barristers or serjeants at law.

SECT. IV. *Of the Public Courts of Common Law and Equity.*

xcviii. (1.) Courts of justice, with regard to their several *species*, are, 1. Of a *public*, or general, jurisdiction throughout the realm. 2. Of a *private*, or special, jurisdiction.

(2.) *Public* courts of justice are, 1. The courts of *common law* and *equity*. 2. The *ecclesiastical* courts. 3. The *military* courts. 4. The *maritime* courts.

(3.) The general and public courts of *common law* and *equity* are, 1. The court of piepoudre. 2. The court-baron. 3. The hundred court. 4. The county court. 5. The court of common pleas. 6. The court of king's bench. 7. The court of exchequer. 8. The court of chancery. (Which two last are courts of *equity* as well as *law*.) 9. The courts of exchequer chamber. 10. The house of peers. To which may be added, as auxiliaries, 11. The courts of assize and *ni si prius*.

SECT. V. *Of Courts Ecclesiastical, Military, and Maritime.*

xcix. (1.) Ecclesiastical courts, (which were separated from the *temporal* by William the Conqueror), or courts *Christian*, are, 1. The courts of the archdeacon. 2. The court of the bishop's consistory. 3. The court of arches. 4. The court of peculiars. 5. The prerogative court. 6. The court of delegates. 7. The court of review.

(2.) The only permanent *military* court is that of chivalry; the courts martial, annually established by act of parliament, being only temporary.

(3.) *Maritime* courts are, 1. The court of admiralty and vice-admiralty. 2. The court of delegates. 3. The lords of the privy council, and others, authorized by the king's commission, for appeals in prize-causes.

SECT. VI. *Of Courts of a Special Jurisdiction.*

cc. Courts of a special or private jurisdiction are, 1. The forest courts; including the courts of attachments, regard, swienmot, and justice seat. 2. The

court of commissioners of sewers. 3. The court of policies of assurance. 4. The court of the marshal's and the palace court. 5. The courts of the principality of Wales. 6. The court of the duchy chamber of Lancaster. 7. The courts of the counties palatine, and other royal franchises. 8. The stannery courts. 9. The courts of London, and other corporations:—To which may be referred the courts of requests or courts of conscience; and the modern regulations of certain courts-baron and county courts. 10. The courts of the two universities.

SECT. VII. *Of the Cognizance of Private Wrongs.*

(1.) All private wrongs or civil injuries are *cognizable* either in the courts *ecclesiastical*, *military*, *maritime*, or those of *common law*.

(2.) Injuries cognizable in the *ecclesiastical* courts are, 1. *Pecuniary*. 2. *Matrimonial*. 3. *Testamentary*.

(3.) *Pecuniary* injuries, here cognizable, are, 1. *Subtraction of tithes*. For which the remedy is by suit to compel their payment, or an equivalent; and also their double value. 2. *Non-payment* of ecclesiastical dues. Remedy: by suit for payment. 3. *Spoilation*. Remedy: by suit for restitution. 4. *Dilapidations*. Remedy: by suit for damages. 5. *Non-repair* of the church, &c.; and *non-payment* of church-rates. Remedy: by suit to compel them.

(4.) *Matrimonial* injuries are, 1. *Facilitation of marriage*. Remedy: by suit for perpetual silence. 2. *Subtraction of conjugal rights*. Remedy: by suit for restitution. 3. *Inability* for the marriage state. Remedy; by suit for divorce. 4. *Refusal* of decent maintenance to the wife. Remedy: by suit for alimony.

(5.) *Testamentary* injuries are, 1. *Disputing* the validity of wills. Remedy: by suit to establish them. 2. *Obstructing* of administrations. Remedy: by suit for the granting them. 3. *Subtraction* of legacies. Remedy: by suit for the payment.

(6.) The course of proceedings herein is much conformed to the civil and canon law: but their only compulsory process is that of excommunication; which is enforced by the temporal writ of *significavit*, or *de excommunicato capiendo*.

(7.) Civil injuries, cognizable in the court *military*, or court of chivalry, are, 1. Injuries in point of *honour*. Remedy: by suit for honourable amends. 2. *Encroachments* in *coat-armour*, &c. Remedy: by suit to remove them. The proceedings are in a summary method.

(8.) Civil injuries cognizable in the courts *maritime*, are injuries, in their nature, of common law cognizance, but arising wholly upon the sea, and not within the precincts of any county. The proceedings are herein also much conformed to the civil law.

(9.) All other injuries are cognizable only in the courts of *common law*: of which in the remainder of this chapter.

(10.) Two of them are, however, commisable by these and other inferior courts, viz. 1. *Refusal*, or *neglect*, of justice. Remedies: by writ of *procedendo*, or *mandamus*. 2. *Encroachment of jurisdiction*. Remedy: by writ of prohibition.

Law of
England
Epitom'd.

SECT. VIII. *Of Wrongs and their Remedies, respecting the Rights of Persons.*

cii. (1.) In treating of the cognizance of injuries by the courts of *common law*, may be considered, 1. The *injuries* themselves, and their respective *remedies*. 2. The *pursuit* of those remedies in the several courts.

(2.) *Injuries* between subject and subject, cognizable by the courts of *common law*, are in general *remedied* by putting the party injured into possession of that right whereof he is unjustly deprived.

(3.) This is effected, 1. By *delivery* of the *thing* detained to the rightful owner. 2. Where that remedy is either impossible or inadequate, by giving the party injured a *satisfaction* in damages.

(4.) The instruments, by which these remedies may be obtained, are *suits* or *actions*; which are defined to be the legal demand of one's right: and these are, 1. *Personal*. 2. *Real*. 3. *Mixed*.

(5.) *Injuries* (whereof some are with, others without, *force*) are, 1. *Injuries* to the rights of *persons*. 2. *Injuries* to the rights of *property*. And the former are, 1. *Injuries* to the *absolute*, 2. *Injuries* to the *relative*, rights of persons.

(6.) The *absolute* rights of individuals are, 1. *Personal security*. 2. *Personal liberty*. 3. *Private property*: (See Chap. I. Sect. 1.) To which the injuries must be correspondent.

(7.) *Injuries* to *personal security* are, 1. Against a man's *life*. 2. Against his *limbs*. 3. Against his *body*. 4. Against his *health*. 5. Against his *reputation*.—The first must be referred to the next chapter.

(8.) *Injuries* to the *limbs* and *body* are, 1. *Threats*. 2. *Affault*. 3. *Battery*. 4. *Wounding*. 5. *Mayhem*. Remedy: by action of trespass, *vi et armis*; for damages.

(9.) *Injuries* to *health*, by any unwholesome practices, are remedied by a special action of trespass, on the case; for damages.

(10.) *Injuries* to *reputation* are, 1. *Slandorous and malicious words*. Remedy: by action on the case; for damages. 2. *Libels*. Remedy: the same. 3. *Malicious prosecutions*. Remedy: by action of conspiracy, or on the case; for damages.

(11.) The sole injury to *personal liberty* is *false imprisonment*. Remedies: 1. By writ of *habeas corpus*; 2dly, *Odio et atia*; 3dly, *Homine replegiando*; 4thly, *Habeas corpus*; to remove the wrong. 2. By action of trespass; to recover damages.

(12.) For injuries to *private property*, see the next section.

(13.) *Injuries* to *relatives* rights affect, 1. *Husbands*. 2. *Parents*. 3. *Guardians*. 4. *Masters*.

(14.) *Injuries* to a *husband* are, 1. *Abduction*, or taking away his wife. Remedy: by action of trespass, *de uxore rapta et abducta*; to recover possession of his wife, and damages. 2. *Criminal conversation* with her. Remedy: by action on the case; for damages. 3. *Beating* her. Remedy: by action on the case, *per quod consortium amisit*; for damages.

(15.) The only injury to a *parent* or *guardian* is the *abduction* of their children or wards. Remedy: by action of trespass, *de filiis, vel custodiis, raptis vel abductis*; to recover possession of them, and damages.

(16.) *Injuries* to a *master* are, 1. *Retaining* his servants. Remedy: by action on the case; for damages. 2. *Beating* them. Remedy: by action on the case, *per quod servitium amisit*; for damages.

Law of
England
Epitom'd.

SECT. IX. *Of Injuries to Personal Property.*

(1.) *Injuries* to the rights of *property* are either to those of *personal* or *real* property.

(2.) *Personal* property is either in *possession* or in *action*.

(3.) *Injuries* to *personal* property in possession are, 1. By *dispossession*. 2. By *damage*, while the owner remains in possession.

(4.) *Dispossession* may be effected, 1. By an unlawful *taking*. 2. By an unlawful *detaining*.

(5.) For the unlawful *taking* of goods and chattels *personal*, the remedy is, 1. *Actual* restitution, which (in case of a wrongful distress) is obtained by action of *replevin*. 3. *Satisfaction* in damages: *1s*, in case of *rescous*, by action of *rescous*, poundbreach, or on the case; *2dly*, in case of other unlawful takings, by action of trespass or trover.

(6.) For the unlawful *detaining* of goods lawfully taken, the remedy is also, 1. *Actual* restitution; by action of *replevin* or *detinue*. 2. *Satisfaction* in damages; by action on the case, for trover and conversion.

(7.) For *damage* to *personal* property, while in the owner's possession, the remedy is in damages; by action of trespass *vi et armis*, in case the act be immediately injurious; or by action of trespass on the case, to redress consequential damage.

(8.) *Injuries* to *personal* property, in *action*, arise by breach of *contracts*, 1. *Express*. 2. *Implied*.

(9.) Breaches of *express* contracts are, 1. By *non-performance* of *debts*. Remedy: *1s*, Specific payment recoverable by action of debt. *2dly*, Damages for non-payment; recoverable by action on the case. 2. By *non-performance* of *covenants*. Remedy: by action of covenant, *1s*, to recover damages, in covenants *personal*; *2dly*, to compel performance, in covenants *real*. 3. By *non-performance* of *promises*, or *assumpsits*. Remedy: by action on the case; for damages.

(10.) *Implied* contracts are such as arise, 1. From the nature and constitution of *government*. 2. From *reason* and the construction of law.

(11.) Breaches of contracts, implied in the nature of *government*, are by the *nonpayment* of money which the laws have directed to be paid. Remedy: by action of debt (which, in such cases is frequently a *popular* frequently a *qui tam* action); to compel the specific payment;—or, sometimes, by action on the case; for damages.

(12.) Breaches of contracts, implied in *reason* and construction of law, are by the *non-performance* of legal presumptive *assumpsits*: for which the remedy is in damages; by an action on the case on the implied *assumpsits*, 1. Of a *quantum meruit*. 2. Of a *quantum valebat*. 3. Of money expended for another. 4. Of receiving money to another's use. 5. Of an *inimul computassent*, on an account stated (the remedy on an account unstated being by action of account). 6. Of performing one's duty, in any employment, with integrity, diligence, and skill. In some of which cases

ciii.

an

an action of deceit (on the case, in nature of deceit) will lie.

Remedy, in both cases: by a mere writ of *right*, the highest writ in the law.

SECT. X. *Of Injuries to Real Property; and, first, of Dispossession, or Ouster, of the Freehold.*

SECT. XI. *Of Dispossession, or Ouster, of Chattels real.*

civ. (1.) Injuries affecting *real* property are, 1. *Ouster*, 2. *Trespass*. 3. *Nuisances*. 4. *Waste*. 5. *Subtraction*. 6. *Disturbance*.

(1.) Ouster from *chattels* real is, 1. From estates by *statute* and *elegit*. 2. From an estate for *years*.

(2.) Ouster is the amotion of possession; and is, 1. From *freeholds*. 2. From *chattels* real.

(2.) Ouster from estates by *statute* or *elegit*, is effected by a kind of *disseisin*. Remedy: restitution, and damages; by assize of *novel disseisin*.

(3.) Ouster from *freeholds* is effected by, 1. *Abatement*. 2. *Intrusion*. 3. *Disseisin*. 4. *Discontinuance*. 5. *Deforcement*.

(3.) Ouster from an estate for years, is effected by a like disseisin, or *ejectment*. Remedy: restitution, and damages; 1. By writ of *ejectione firmæ*. 1. By writ of *quare ejecit infra terminum*.

(4.) *Abatement* is the entry of a stranger, after the death of the ancestor, before the heir.

(4.) A writ of *ejectione firmæ*, or action of trespass in ejectment, lieth where lands, &c. are let for a term of years, and the lessee is ousted or ejected from his term; in which case he shall recover possession of his term, and damages.

(5.) *Intrusion* is the entry of a stranger, after a particular estate of freehold is determined, before him in remainder or reversion.

(5.) This is now the usual method of trying titles to land, instead of an action real: viz. By 1. The claimant's making an actual (or supposed) lease upon the land to the plaintiff. 2. The plaintiff's actual (or supposed) entry thereupon. 3. His actual (or supposed) ouster and ejectment by the defendant. For which injury this action is brought either against the tenant, or (more usually) against some casual or fictitious ejector; in whose stead the tenant may be admitted defendant, on condition that the lease, entry, and ouster, be confessed, and that nothing else be disputed but the merits of the title claimed by the lessor of the plaintiff.

(6.) *Disseisin* is a wrongful putting out of him that is seized of the freehold.

(6.) A writ of *quare ejecit infra terminum* is an action of a similar nature; only not brought against the wrongdoer or ejector himself, but such as are in possession under his title.

(7.) *Discontinuance* is where tenant in tail, or the husband of tenant in fee, makes a larger estate of the land than the law alloweth.

(8.) *Deforcement* is any other detainer of the freehold from him that hath the property, but who never had the possession.

(9.) The universal remedy for all these is restitution or delivery of possession; and, sometimes, damages for the detention. This is effected, 1. By mere *entry*. 2. By action *possessory*. 3. By writ of *right*.

(10.) Mere *entry*, on lands, by him who hath the apparent right of possession, will (if *peaceable*) divest the mere *possession* of a wrongdoer. But *forcible* entries are remedied by immediate restitution, to be given by a justice of the peace.

SECT. XII. *Of Trespass.*

(11.) Where the wrongdoer hath not only mere possession, but also an *apparent* right of possession, this may be divested by him who hath the *actual* right of possession, by means of the *possessory* actions of writ of *entry* or *assize*.

Trespass is an entry upon, and damage done to, another's lands, by one's self, or one's cattle; without any lawful authority, or cause of justification; which is called a *breach of his clost*. Remedy: damages; by action of trespass, *quare clausum fregit*; besides that of distress, damage feasant. But, unless the title to the land came chiefly in question, or the trespass was wilful or malicious, the plaintiff (if the damages be under forty shillings) shall recover no more costs than damages.

SECT. XIII. *Of Nuisance.*

(12.) A writ of *entry* is a real action, which improves the title of the tenant, by showing the unlawful means under which he gained or continues possession. And it may be brought either against the wrongdoer himself, or in the degrees called the *per*, the *per* and *cui*, and the *poss*.

(13.) An *assize* is a real action, which proves the title of the demandant, by showing his own or his ancestor's possession. And it may be brought either to remedy abatements; viz. the assize of *mort d'ancestor*, &c.: Or to remedy recent disseisins; viz. the assize of *novel disseisin*.

(1.) Nuisance, or annoyance, is any thing that worketh damage or inconvenience: and it is either a *public* and *common* nuisance, of which in the next chapter; or, a *private* nuisance, which is any thing done to the hurt or annoyance of, 1. The corporeal; 2. The incorporeal, hereditaments of another.

(14.) Where the wrongdoer hath gained the actual right of possession, he who hath the right of property can only be remedied by a writ of *right*, or some writ of a similar nature. As, 1. Where such right of possession is gained by the *discontinuance* of tenant in tail. Remedy, for the right of property: by writ of *formedon*. 2. Where gained by *recovery* in a possessory action, had against tenants of particular estates by their own default. Remedy: by writ of *quod ei deforceat*. 3. Where gained by *recovery* in a possessory action, had upon the merits. 4. Where gained by the *statute of limitations*.

(2.) The remedies for a private nuisance (besides that of abatement) are, 1. Damages; by action on the case; (which also lies for special prejudice by a public nuisance). 2. Removal thereof, and damages; by assize of nuisance. 3. Like removal, and damages; by writ of *Quod permittat prosternere*.

SECT. XIV. *Of Waste.*

(1.) Waste is a spoil and destruction in lands and tenements, to the injury of him who hath, 1. An immediate interest (as, by right of common) in the lands. 2. The remainder of reversion of the inheritance.

(2.) The remedies, for a commoner, are restitution, and damages; by assize of common: Or damages only; by action on the case.

(3.) The remedy, for him in remainder, or reversion, is, 1. Preventive: by writ of *estrepment* at law, or injunction out of chancery; to stay waste. 2. Corrective: by action of waste; to recover the place wasted, and damages.

SECT. XV. *Of Subtraction.*

(1.) Subtraction is when one, who owes services to another, withdraws or neglects to perform them. This may be, 1. Of rents, and other services, due by *tenure*. 2. Of those due by *custom*.

(2.) For subtraction of rents and services, due by *tenure*, the remedy is, 1. By distress; to compel the payment or performance. 2. By action of debt. 3. By assize. 4. By writ of *consuetudinibus et servitiis*;—to compel the payment. 5. By writ of *cessavit*;—and, 6. By writ of right *sur disclaimer*;—to recover the land itself.

(3.) To remedy the oppression of the land, the law has also given, 1. The writ of *Ne injustè vexes*: 2. The writ of *mesne*.

(4.) For subtraction of services, due by *custom*, the remedy is, 1. By writ of *Seffa ad molendinum, furnum torrale, &c.* to compel the performance, and recover damages. 2. By action on the case; for damages only.

SECT. XVI. *Of Disturbance.*

(1.) Disturbance is the hindering, or disquieting, the owners of an incorporeal hereditament, in their regular and lawful enjoyment of it.

(2.) Disturbances are, 1. Of *franchises*. 2. Of *commons*. 3. Of *ways*. 4. Of *tenure*. 5. Of *patronage*.

(3.) Disturbance of *franchises* is remedied by a special action on the cases; for damages.

(4.) Disturbance of *common*, is, 1. *Intercommoning* without right. Remedy: damage; by an action on the case, or of trespass: besides distress, damage feasant; to compel satisfaction. 2. *Surcharging* the common. Remedies: distress, damage feasant; to compel satisfaction: action on the case; for damages: or, writ of admeasurement of pasture; to apportion the common. and writ of *de secunda superoneratione*; for the supernumerary cattle, and damages. 3. *Enclosure*, or obstruction. Remedies: restitution of the common and damages; by assize of *novel disseisin*, and by writ of *quod admittat*: or, damages only; by action on the case.

(5.) Disturbance of *ways*, is the obstruction, 1. Of a way in gross, by the owner of the land. 2. Of a way appurtenant, by a stranger. Remedy, for both: damages: by action on the case.

(6.) Disturbance of *tenure*, by driving away tenants, is remedied by a special action on the case; for damages.

(7.) Disturbance of *patronage*, is the hinderance of a patron to present his clerk to a benefice; whereof *usurpation*, within six months is now become a species.

(8.) Disturbers may be, 1. The pseudo-patron, by his wrongful presentation. 2. His clerk, by demanding institution. 3. The ordinary, by refusing the clerk of the true patron.

(9.) The remedies are, 1. By assize of *darrein presentment*; 2. By writ of *quare impedit*;—to compel institution and recover damages: Consequent to which are the writs of *quare incumbavit*, and *quare non admittit*; for subsequent damages. 3. By writ of right of advowson; to compel institution, or establish the permanent right.

SECT. XVII. *Of Injuries Proceeding from, or Affecting, the Crown.*

(1.) Injuries to which the crown is a party are, 1. Where the crown is the aggressor. 2. Where the crown is the sufferer.

(2.) The crown is the aggressor, whenever it is in possession of any property to which the subject hath a right.

(3.) This is remedied, 1. By *petition of right*; where the right is grounded on facts disclosed in the petition itself. 2. By *monstrans de droit*; where the claim is grounded on facts, already appearing on record. The effect of both which is to remove the hands (or possession) of the king.

(4.) Where the crown is the sufferer, the king's remedies are, 1. By such common law actions as are consistent with the royal dignity. 2. By *inquest of office*, to recover possession: which, when found, gives the king his right by solemn matter of record; but may afterwards be *traversed* by the subject. 3. By writ of *seire facias*, to repeal the king's patent or grant. 4. By *information of intrusion*, to give damages for any trespass on the lands of the crown; or of *debt*, to recover moneys due upon contract, or forfeited by the breach of any penal statute; or sometimes (in the latter case) by *information in rem*: all filed in the exchequer *ex officio* by the king's attorney general. 5. By writ of *quo warranto*, or information in the nature of such writ; to seize into the king's hands any franchise usurped by the subject, or to oust an usurper from any public office. 6. By writ of *mandamus*, unless cause; to admit or restore any person entitled to a franchise or office: to which, if a false cause be returned, the remedy is by *traverse*, or by action on the case for damages; and, in consequence, a peremptory *mandamus*, or writ of restitution.

SECT. XVIII. *Of the Pursuit of Remedies by Action; and, First, of the Original Writ.*

(1.) The pursuit of the several remedies furnished by the laws of England, is, 1. By *action* in the courts of *common law*. 2. By *proceedings* in the courts of *equity*.

(2.) Of an *action* in the court of *common pleas* (originally.

Law of
England
Epitomised.

ginally the proper court for prosecuting civil suits) the orderly parts, are, 1. The *original writ*. 2. The *process*. 3. The *pleadings*. 4. The *issue* or *demurrer*. 5. The *trial*. 6. The *judgement*. 7. The proceedings in nature of *appeal*. 8. The *execution*.

(3.) The *original writ* is the beginning or foundation of a suit, and is either *optional* (called a *præcipe*), commanding the defendant to do something in certain, or otherwise show cause to the contrary; or *peremptory* (called a *si fecerit te securum*), commanding, upon security given by the plaintiff, the defendant to appear in court, to show wherefore he hath injured the plaintiff: both issuing out of chancery under the king's great seal, and returnable in bank during term time.

SECT. XIX. *Of Process.*

(1.) Process is the means of compelling the defendant to appear in court.

(2.) This includes, 1. *Summons*. 2. The writ of attachment, or *poene*; which is sometimes the first or original process. 3. The writ of *distringas*, or distress infinite. 4. The writs of *capias ad respondendum*, and *testatum capias*: or, instead of these, in the king's bench, the bill of Middlesex, and writ of *latitat*:—and, in the exchequer, the writ of *quo minus*. 5. The *alias* and *pluries* writs. 6. The exigent, or writ of *exigi facias*, proclamations, and outlawry. 7. Appearance, and common bail. 8. The arrest. 9. Special bail, first to the sheriff, and then to the action.

SECT. XX. *Of Pleadings.*

Pleadings are the mutual altercations of the plaintiff and defendant in writing; under which are comprised, 1. The declaration of court; (wherein, incidentally, of the issue, nonsuit, *retraxit*, and discontinuance.) 2. The defence, claim of cognizance, imparlance, view, oyer, aid-prayer, voucher, or age. 3. The plea; which is either a *dilatory* plea (1st, to the jurisdiction; 2dly, in disability of the plaintiff; 3dly, in abatement), or it is a plea to the action; sometimes confessing the action either in whole or in part; (wherein of a tender, paying money into court, and set off): but usually denying the complaint, by pleading either, 1st, the general issue: or, 2dly, a special bar (wherein of justifications, the statutes of limitation, &c.) 4. Replication, rejoinder, surrejoinder, rebutter, surrebutter, &c. Therein of estoppels, colour, duplicity, departure, new assignment, protestation, averment, and other incidents of pleading.

SECT. XXI. *Of Issue and Demurrer.*

(1.) Issue is where the parties, in a course of pleadings, come to a point affirmed on one side and denied on the other; which, if it be a matter of law, is called a *demurrer*; if it be a matter of fact, still it retains the name of an issue, of fact.

(2.) *Continuance* is the detaining of the parties in court from time to time, by giving them a day certain to appear upon. And, if any new matter arises since the last continuance or adjournment, the defendant may take advantage of it, even after demurrer or issue, by alleging it in a plea *puis darrain continuance*.

(3.) The determination in an issue of law, or demurrer, is by the opinion of the judges of the court which is afterwards entered on record.

Law of
England
Epitomised.SECT. XXII. *Of the Several Species of Trial.*

(1.) Trial is the examination of the matter of fact put in issue.

(2.) The species of trial are, 1. By the *record*. 2. By *inspection*. 3. By *certificate*. 4. By *witnesses*. 5. By *wager of battel*. 6. By *wager of law*. 7. By *jury*.

(3.) Trial by the *record* is had, when the existence of such record is the point in issue.

(4.) Trial by *inspection* or *examination* is had by the court, principally when the matter in issue is the evident object of the senses.

(5.) Trial by *certificate* is had in those cases, where such certificate must have been conclusive to a jury.

(6.) Trial by *witnesses* (the regular method in the civil law) is only used on a writ of dower, when the death of the husband is in issue.

(7.) Trial by *wager of battel*, in civil cases, is only had on a writ of right; but, in lieu thereof, the tenant may have at his option, the trial by the *grand assize*.

(8.) Trial by *wager of law* is only had, where the matter in issue may be supposed to have been privily transacted between the parties themselves, without the intervention of other witnesses.

SECT. XXIII. *Of the Trial by Jury.*

(1.) Trial by *jury* is, 1. *Extraordinary*; as, by the grand assize, in writs of right; and by the grand jury, in writs of attain. 2. *Ordinary*.

(2.) The method and process of the *ordinary* trial by jury is, 1. The writ of *venire facias* to the sheriff, coroners, or elisors; with the subsequent compulsive process of *habeas corpora*, or *distringas*. 2. The carrying down of the record to the court of *nisi prius*. 3. The sheriff's return; or panel of, 1st, special; 2dly, common jurors. 4. The challenges; 1st, to the array; 2dly, to the polls of the jurors; either *propter honoris respectum*, *propter defectum*, *propter affectum*, (which is sometimes a principal challenge, sometimes to the favour), or *propter delictum*. 5. The *tales de circumstantibus*. 6. The oath of the jury. 7. The evidence; which is either by proofs, 1st, written; 2dly, parole:—or, by the private knowledge of the jurors. 6. The verdict; which may be, 1st, privy; 2dly, public; 3dly, special.

SECT. XXIV. *Of Judgement and its Incidents.*

(1.) Whatever is transacted at the trial in the court of *nisi prius*, is added to the record under the name of a *posita*: consequent upon which is the *judgement*.

(2.) Judgement may be *arrested* or *stayed* for causes, 1. *Extrinsic*, or *dehors* the record; as in the case of *new trials*. 2. *Intrinsic*, or within it; as where the declaration varies from the writ, or the verdict from the pleadings, and issue; or where the case, laid in the declaration, is not sufficient to support the action in point of law.

(3.) Where the issue is immaterial or insufficient, the court may award a *repleader*.

Law of
England
Epitomised.

(4.) *Judgement* is the sentence of the law, pronounced by the court, upon the matter contained in the record.

(5.) Judgements are, 1. Interlocutory; which are incomplete till perfected by a writ of inquiry. 2. Final.

(6.) *Costs*, or expences of suit, are now the necessary consequence of obtaining judgement.

SECT. XXV. *Of Proceedings, in the Nature of Appeals.*

cxix.

(1.) Proceedings, in the nature of *appeals* from judgement, are, 1. A writ of *attaint*; to impeach the verdict of a jury; which of late has been superseded by new trials. 2. A writ of *audita querela*; to discharge a judgement by matter that has since happened. 3. A writ of *error*, from one court of record to another; to correct judgements, erroneous in point of law, and not helped by the statutes of amendment and jeofails.

(2.) Writs of error lie, 1. To the court of *king's bench*, from all inferior courts of record; from the court of *common pleas* at Westminster; and from the court of *king's bench* in Ireland. 2. To the courts of *exchequer chamber*, from the law side of the courts of *exchequer*; and from proceedings in the court of *king's bench* by bill. 3. To the house of *peers*, from proceedings in the court of *king's bench* by original, and on writs of error; and from the several courts of *exchequer chamber*.

SECT. XXVI. *Of Execution.*

cxx.

Execution is the putting in force of the sentence or judgement of the law. Which is effected, 1. Where possession of any hereditament is recovered: by writ of *habere facias seisinam, possessionem, &c.* 2. Where any thing is awarded to be done or rendered, by a special writ for that purpose: as, by writ of abatement, in case of nuisance; *retorna habendo* and *capias in wiveram*, in replevin; *distringas* and *seire facias*, in detinue. 3. Where money only is recovered; by writ of, 1st, *Capias ad satisfaciendum*, against the *body* of the defendant; or in default thereof, *seire facias* against his bail. 2dly, *Fieri facias*, against his *goods* and chattels. 3dly, *Levari facias*, against his *goods* and the *profits* of his lands. 4thly, *Elegit*, against his *goods*, and the *possession* of his *lands*. 5thly, *Extendi facias*, and other process, on statutes, recognizances, &c. against his *body, lands, and goods*.

SECT. XXVII. *Of Proceedings in the Courts of Equity.*

cxix.

(1.) Matters of equity which belong to the peculiar jurisdiction of the court of *chancery*, are, 1. The guardianship of infants. 2. The custody of idiots and lunatics. 3. The superintendance of charities. 4. Commissions of bankrupt.

(2.) The court of *exchequer* and the duchy court of *Lancaster*, have also some peculiar causes, in which the interest of the king is more immediately concerned.

(3.) *Equity* is the true sense and sound interpretation of the rules of law; and, as such, is equally attended to by the judges of the courts both of common law and equity.

Law
Engl
Epitom

(4.) The essential differences, whereby the English courts of equity are distinguished from the courts of law, are, 1. The mode of *proof*, by a discovery on the oath of the party; which gives a jurisdiction in matters of account, and fraud. 2. The mode of *trial*; by depositions taken in any part of the world. 3. The mode of *relief*; by giving a more specific and extensive remedy than can be had in the courts of law; as, by carrying agreements into execution, staying waste or other injuries by injunction, directing the sale of encumbered lands, &c. 4. The true construction of *securities* for money, by considering them merely as a pledge. 5. The execution of *trusts*, or second uses, in a manner analogous to the law of legal estates.

(5.) The proceedings in the court of chancery (to which those in the exchequer, &c. very nearly conform) are, 1. Bill. 2. Writ of *subpoena*; and, perhaps, injunction. 3. Process of contempt; viz. (ordinarily) attachment, attachment with proclamations, commission of rebellion, serjeant at arms, and sequestrations. 4. Appearance. 5. Demurrer. 6. Plea. 7. Answer. 8. Exceptions; amendments; cross, or supplemental, bills; bills of revivor, interpleader, &c. 9. Replication. 10. Issue. 11. Depositions, taken upon interrogatories; and subsequent publication thereof. 12. Hearing. 13. Interlocutory decree; feigned issue, and trial; reference to the master, and report; &c. 14. Final decree. 15. Rehearing, or bill of review. 16. Appeal to parliament.

CHAP. IV. *OF PUBLIC WRONGS.*

SECT. I. *Of the Nature of Crimes, and their Punishment.*

(1.) IN treating of *public wrongs* may be considered, 1. The general *nature* of crimes and punishments. 2. The persons *capable* of committing crimes. 3. Their several *degrees* of guilt. 4. The several *species* of crimes, and their respective punishments. 5. The means of *prevention*. 6. The method of *punishment*.

(2.) A *crime*, or *misdemeanor*, is an act committed, or omitted, in violation of a public law either forbidding or commanding it.

(3.) Crimes are distinguished from civil injuries, in that they are a breach and violation of the *public rights*, due to the whole community, considered as a community.

(4.) *Punishments* may be considered with regard to, 1. The *power*; 2. The *end*; 3. The *measure*;—of their infliction.

(5.) The *power*, or right, of inflicting human punishments for *natural crimes*, or such as are *mala in se*, was by the law of nature veiled in every individual: but, by the fundamental contract of society, is now transferred to the sovereign power; in which also is vested, by the same contract, the right of punishing *positive offences*, or such as are *mala prohibita*.

(6.) The *end* of human punishments is to prevent future offences; 1. By amending the offender himself. 2. By deterring others through his example. 3. By depriving him of the power to do future mischief.

(7.) The *measure* of human punishments must be determined by the wisdom of the sovereign power, and

cxix.

not by any uniform universal rule: though that wisdom may be regulated, and assisted, by certain general, equitable, principles.

SECT. II. *Of the Persons capable of Committing Crimes.*

(1.) All persons are capable of committing crimes, unless there be in them a defect of will: for, to constitute a legal crime, there must be both a vitious will, and a vitious act.

(2.) The will does not concur with the act, 1. Where there is a defect of understanding. 2. Where no will is exerted. 3. Where the act is constrained by force and violence.

(3.) A vitious will may therefore be wanting, in the cases of, 1. Infancy. 2. Idiocy, or lunacy. 3. Drunkenness; which doth not, however, excuse. 4. Misfortune. 5. Ignorance, or mistake of fact. 6. Compulsion, or necessity; which is, 1st, that of civil subjection; 2dly, that of duress *per minas*; 3dly, that of choosing the least pernicious of two evils, where one is unavoidable; 4thly, that of want, or hunger; which is no legitimate excuse.

(4.) The king, from his excellence and dignity, is also incapable of doing wrong.

SECT. III. *Of Principals and Accessories.*

(1.) The different degrees of guilt in criminals are, 1. As principals. 2. As accessories.

(2.) A principal in a crime is, 1. He who commits the fact. 2. He who is present at, aiding, and abetting, the commission.

(3.) An accessory is he who doth not commit the fact, nor is present at the commission; but is in some sort concerned therein, either before or after.

(4.) Accessories can only be in petit treason, and felony: in high treason, and misdemeanors, all are principals.

(5.) An accessory, before the fact, is one who, being absent when the crime is committed, hath procured, counselled, or commanded, another to commit it.

(6.) An accessory after the fact, is where a person, knowing a felony to have been committed, receives, relieves, comforts, or assists, the felon. Such accessory is usually entitled to the benefit of clergy; where the principal, and accessory before the fact, are excluded from it.

SECT. IV. *Of Offences against God and Religion.*

(1.) Crimes and misdemeanors cognizable by the laws of England are such as more immediately offend, 1. GOD, and his holy religion. 2. The law of nations. 3. The king, and his government. 4. The public, or commonwealth. 5. Individuals.

(2.) Crimes more immediately offending GOD and religion are, 1. Apostacy. For which the penalty is incapacity, and imprisonment. 2. Heresy. Penalty, for one species thereof: the same. 3. Offences against the established church:—Either, by reviling its ordinances. Penalties: fine; deprivation; imprisonment; forfeiture.—Or, by nonconformity to its worship;

1st, Through total irreligion. Penalty: fine, 2dly, Through Protestant dissenting. Penalty: suspended by the toleration act. 3dly, Through Popery, either in professors of the popish religion, popish recusants, convict, or popish priests. Penalties: incapacity; double taxes; imprisonment; fines; forfeitures; abjuration of the realm; judgement of felony, without clergy; and judgement of high treason. 4. Blasphemy. Penalty: fine, imprisonment, and corporal punishment. 5. Profane swearing and cursing. Penalty: fine, or house of correction. 6. Witchcraft; or, at least, the pretence thereto. Penalty: imprisonment, and pillory. 7. Religious impostures. Penalty: fine, imprisonment, and corporal punishment. 8. Simony. Penalties: forfeiture of double value; incapacity. 9. Sabbath-breaking. Penalty: fine. 10. Drunkenness. Penalty: fine or stocks. 11. Lewdness. Penalties: fine; imprisonment; house of correction.

SECT. V. *Of Offences against the Law of Nations.*

(1.) The law of nations is a system of rules, deducible by natural reason, and established by universal consent, to regulate the intercourse between independent states.

(2.) In England, the law of nations is adopted in its full extent, as part of the law of the land.

(3.) Offences against this law are principally incident to whole states or nations; but, when committed by private subjects, are then the objects of the municipal law.

(4.) Crimes against the law of nations, animadverted on by the laws of England, are, 1. Violation of safe conducts. 2. Infringement of the rights of ambassadors. Penalty, in both: arbitrary. 3. Piracy. Penalty: judgement of felony, without clergy.

SECT. VI. *Of High Treason.*

(1.) Crimes and misdemeanors more peculiarly offending the king and his government are, 1. High treason. 2. Felonies injurious to the prerogative. 3. Pre-munire. 4. Other misprisions and contempts.

(2.) High treason may, according to the statute of Edward III. be committed, 1. By compassing or imagining the death of the king, or queen-consort, or their eldest son and heir: demonstrated by some overt act. 2. By violating the king's companion, his eldest daughter, or the wife of his eldest son. 3. By some overt act of levying war against the king in his realm. 4. By adherence to the king's enemies. 5. By counterfeiting the king's great or privy seal. 6. By counterfeiting the king's money, or importing counterfeit money. 7. By killing the chancellor, treasurer, or king's justices, in the execution of their offices.

(3.) High treasons, created by subsequent statutes, are such as relate, 1. To Papists: as, the repeated defence of the pope's jurisdiction; the coming from beyond sea of a natural born popish priest; the renouncing of allegiance, and reconciliation to the pope or other foreign power. 2. To the coinage, or other signatures of the king: as, counterfeiting (or, importing and uttering counterfeit) foreign coin, here current; forging the sign-manual, privy signet, or privy seal; falsifying, &c. the current coin. 3. To the

Law of
England
Epitom'd.

Protestant succession; as, corresponding with, or remitting to, the late Pretender's sons; endeavouring to impede the succession; writing or printing in defence of any pretender's title, or in derogation of the act of settlement, or of the power of parliament to limit the descent of the crown.

(4.) The *punishment* of high treason, in *males*, is (generally) to be, 1. Drawn. 2. Hanged. 3. Embowelled alive. 4. Beheaded. 5. Quartered. 6. The head and quarters to be at the king's disposal. But, in treasons relating to the coin, only to be drawn, and hanged till dead. *Females*, in both cases, are to be drawn, and burned alive.

SECT. VII. Of Felonies injurious to the King's Prerogative.

cxxxix.

(1.) Felony is that offence which occasions the total forfeiture of lands or goods, at common law; now usually also punishable with death, by hanging; unless through the benefit of clergy.

(2.) *Felonies* injurious to the king's prerogative (of which some are within, others without clergy) are, 1. Such as relate to the *coin*: as, the wilful uttering of counterfeit money, &c.; (to which head some inferior misdemeanors affecting the coinage may be also referred). 2. Conspiring or attempting to kill a *privy counsellor*. 3. Serving *foreign* states, or enlisting soldiers for *foreign* service. 4. Embezzling the king's *armour* or *stores*. 5. *Desertion* from the king's *armies* by land or sea.

SECT. VIII. Of Præmunire.

cxxx.

(1.) Præmunire, in its original sense, is the offence of adhering to the temporal power of the pope, in derogation of the regal authority. Penalty: outlawry, forfeiture, and imprisonment: which hath since been extended to some offences of a different nature.

(2.) Among these are, 1. Importing Popish trinkets. 2. Contributing to the maintenance of Popish seminaries abroad, or Popish priests in England. 3. Molesting the possessors of abbey lands. 4. Acting as broker in an usurious contract, for more than ten per cent. 5. Obtaining any stay of proceedings in suits for monopolies. 6. Obtaining an exclusive patent for gunpowder or arms. 7. Exertion of purveyance or pre-emption. 8. Asserting a legislative authority in both or either house of parliament. 9. Sending any subject a prisoner beyond sea. 10. Refusing the oaths of allegiance and supremacy. 11. Preaching, teaching, or advised speaking, in defence of the right of any pretender to the crown, or in derogation of the power of parliament to limit the succession. 12. Treating of other matters by the assembly of peers of Scotland, convened for electing their representatives in parliament. 13. Unwarrantable undertakings by unlawful subscriptions to public funds.

SECT. IX. Of Misprisions and Contempts affecting the King and Government.

cxxxii.

(1.) Misprisions and *contempts* are all such high offences as are under the degree of capital.

(2.) These are, 1. *Negative*, in concealing what ought

to be revealed. 2. *Positive*, in committing what ought not to be done.

(3.) *Negative* misprisions are, 1. Misprision of *treason*. Penalty: forfeiture and imprisonment. 2. Misprision of *felony*. Penalty: fine and imprisonment. 3. Concealment of *treasure trove*. Penalty: fine and imprisonment.

(4.) *Positive* misprisions or high misdemeanors and contempts, are, 1. *Mal-administration* of public trusts, which includes the crime of *peculation*. Usual penalties: banishment; fines; imprisonment; disability. 2. Contempts against the king's *prerogative*. Penalty: fine, and imprisonment. 3. Contempt against his *person* and *government*. Penalty: fine, imprisonment, and infamous corporal punishment. 4. Contempts against his *title*. Penalties: fine, and imprisonment; or fine, and disability. 5. Contempts against his *palaces*, or *courts* of justice. Penalties: fine; imprisonment; corporal punishment; loss of right hand; forfeiture.

SECT. X. Of Offences against Public Justice.

(1.) Crimes especially affecting the *commonwealth* are offences, 1. Against the public *justice*. 2. Against the public *peace*. 3. Against the public *trade*. 4. Against the public *health*. 5. Against the public *police* or *economy*.

(2.) Offences against the public *justice*, are, 1. *Embezzling* or *vacating* records, and *personating* others in courts of justice. Penalty: judgement of felony, usually without clergy. 2. *Compelling* prisoners to become *approvers*. Penalty: judgement of felony. 3. *Obstructing* the execution of process. 4. *Escapes*. 5. *Breach* of prison. 6. *Rescue*. Which four may (according to the circumstances) be either felonies, or misdemeanors punishable by fine and imprisonment. 7. *Returning* from *transportation*. - This is felony, without clergy. 8. Taking *rewards* to *help* one to his stolen goods. Penalty: the same as for the theft. 9. *Receiving* stolen goods. Penalties: transportation; fine; and imprisonment. - 10. *Theft*. 11. Common *barretery* and suing in a feigned name. 12. *Maintenance*. 13. *Champerty*. Penalty, in these four: fine, and imprisonment. 14. *Compounding* prosecutions on penal statutes. Penalty: fine, pillory, and disability. 15. *Conspiracy*; and threats of accusation in order to extort money, &c. Penalties: the villanous judgement; fine; imprisonment; pillory; whipping; transportation. 16. *Perjury*, and subornation thereof. Penalties: infamy; imprisonment; fine, or pillory; and, sometimes, transportation or house of correction. 17. *Bribery*. Penalty: fine, and imprisonment. 18. *Embracery*. Penalty: infamy, fine, and imprisonment. 19. *Falſe verdict*. Penalty: the judgement in attain. 20. *Negligence* of public officers, &c. Penalty: fine, and forfeiture of the office. 21. *Oppression* by magistrates. 22. *Extortion* of officers. Penalty, in both: imprisonment, fine, and sometimes forfeiture of the office.

SECT. XI. Of Offences against the Public Peace.

Offences against the public *peace*, are, 1. *Riotous assemblies* to the number of *twelve*. 2. Appearing *armed*,

Law
Engla
Epitom

cxxxiii.

cxxxiiii.

armed, or hunting in *disguise*. 3. *Threatening*, or *demanding* any valuable thing by letter.—All these are felonies, without clergy. 4. *Destroying of turnpikes*, &c. Penalties: whipping; imprisonment; judgement of felony, with and without clergy. 5. *Affrays*. 6. *Riots, routs, and unlawful assemblies*. 7. *Tumultuous petitioning*. 8. *Forcible entry, and detainer*. Penalty, in all four: fine, and imprisonment. 9. *Going unusually armed*. Penalty: forfeiture of arms, and imprisonment. 10. *Spreading false news*. Penalty: fine, and imprisonment. 11. *Pretended prophecies*. Penalties: fine; imprisonment; and forfeiture. 12. *Challenges to fight*. Penalty: fine, imprisonment, and sometimes forfeiture. 13. *Libels*. Penalty: fine, imprisonment, and corporal punishment.

SECT. XII. Of Offences against Public Trade.

Offences against the public trade, are, 1. *Owling*. Penalties: fine; forfeiture; imprisonment, loss of left hand; transportation; judgement of felony. 2. *Smuggling*. Penalties: fines; loss of goods; judgement of felony, without clergy. 3. *Fraudulent bankruptcy*. Penalty: judgement of felony without clergy. 4. *Ufury*. Penalty: fine, and imprisonment. 5. *Cheating*. Penalties: fine; imprisonment; pillory; tumbrel; whipping, or other corporal punishment, transportation. 6. *Forestalling*. 7. *Regrating*. 8. *Engrossing*. Penalties, for all three: loss of goods; fine; imprisonment; pillory. 9. *Monopolies and combinations to raise the price of commodities*. Penalties: fines; imprisonment; pillory; loss of ear; infamy; and, sometimes the pains of *præmunire*. 10. *Exercising a trade, not having served as an apprentice*. Penalty: fine. 11. *Transporting, or residing abroad of artificers*. Penalties: fine; imprisonment; forfeiture; incapacity; becoming aliens.

SECT. XIII. Of Offences against the Public Health, and Public Police or Economy.

(1.) Offences against the public health, are, 1. *Irregularity*, in the time of the *plague*, or of *quarantine*. Penalties: whipping; judgement of felony, with and without clergy. 2. *Selling unwholesome provisions*. Penalties: amercement; pillory; fine; imprisonment; abjuration of the town.

(2.) Offences against the public police and economy or domestic order of the kingdom, are, 1. Those relating to *clandestine and irregular marriages*. Penalties: judgement of felony, with and without clergy. 2. *Bigamy*, or (more properly) *polygamy*. Penalty: judgement of felony. 3. *Wandering, by soldiers or mariners*. 4. *Remaining in England, by Egyptians*; or being in their *fellowship* one month. Both these are felonies, without clergy. 5. *Common nuisances*, 1st, By annoyances or purprestures in highways, bridges, and rivers; 2dly, By offensive trades and manufactures; 3dly, By disorderly houses; 4thly, By lotteries; 5thly, By cottages; 6thly, By fireworks; 7thly, By *evesdropping*. Penalty: in all five. 8thly, By common *scolding*. Penalty: the *cucking stool*. 6. *Idleness, disorder, vagrancy, and incorrigible roguery*. Penalties: imprisonment; whipping; judgement of felony. 7. *Luxury*, in diet. Penalty, discretionary. 8. *Gaming*. Penalties:

to gentlemen, fine; to others, fine and imprisonment; to cheating gamesters, fine, infamy, and the corporal pains of perjury. 9. *Destroying the game*. Penalties: fines, and corporal punishment.

SECT. XIV. Of Homicide.

(1.) Crimes especially affecting *individuals*, are, 1. Against their *persons*. 2. Against their *habitations*. 3. Against their *property*.

(2.) Crimes against the *persons* of individuals, are, 1. By *homicide*, or destroying life. 2. By other *corporal injuries*.

(3.) *Homicide* is, 1. *Justifiable*. 2. *Excusable*. 3. *Felonious*.

(4.) *Homicide* is *justifiable*. 1. By necessity, and command of law. 2. By permission of law; 1st, For the furtherance of public justice; 2dly, For prevention of some forcible felony.

(5.) *Homicide* is *excusable*. 1. *Per infortunium*, or by misadventure. 2. *Se defendendo* or in self-defence, by chance-medley. Penalty, in both: forfeiture of goods; which however is pardoned of course.

(6.) *Felonious homicide* is the killing of a human creature without justification or excuse. This, is, 1. *Killing one's self*. 2. *Killing another*.

(7.) *Killing one's self, or self-murder*, is where one deliberately, or by any unlawful malicious act, puts an end to his own life. This is felony; punished by ignominious burial, and forfeiture of goods and chattels.

(8.) *Killing another* is, 1. *Manlaughter*. 2. *Murder*.

(9.) *Manlaughter* is the unlawful killing of another, without malice, express or implied. This is either, 1. *Voluntary*, upon a sudden heat. 2. *Involuntary*, in the commission of some unlawful act. Both are felony, but within clergy; except in the case of *stabbing*.

(10.) *Murder* is when a person, of sound memory and discretion, unlawfully killeth any reasonable creature, in being, and under the king's peace; with malice aforethought, either express or implied. This is felony, without clergy; punished with speedy death, and hanging in chains, or dissection.

(11.) *Petit treason* (being an aggravated degree of *murder*) is where the servant kills his master, the wife her husband, or the ecclesiastic his superior. Penalty: in men, to be drawn and hanged; in women, to be drawn and burned.

SECT. XV. Of Offences against the Persons of Individuals.

Crimes affecting the *persons* of individuals, by other corporal injuries not amounting to homicide, are, 1. *Mayhem*; and also *shooting* at another. Penalties: fine; imprisonment; judgement of felony, without clergy. 2. *Forcible abduction, and marriage or defilement*, of an heiress; which is felony: also, *stealing, and disflowering or marrying*, any woman child under the age of *sixteen* years; for which the penalty is imprisonment, fine, and temporary forfeiture of her lands. 3. *Rape*, and also *carnal knowledge*, of a woman child under the age of *ten* years. 4. *Buggery*, with man or beast. Both these are felonies, without clergy. 5. *Assault*. 6. *Battery*; especially of clergymen. 7. *Wounding*. Penalties, in all three: fine; imprisonment; and other corporal

Law of
England
Epitomised.

poral punishment. 8. *False imprisonment*. Penalties: fine; imprisonment; and (in some atrocious cases) the pains of *præmunire*, and incapacity of office or pardon. 9. *Kidnapping*, or forcibly stealing away the king's subjects. Penalty: fine; imprisonment; and pillory.

SECT. XVI. *Of Offences against the Habitations of Individuals.*

cxviii.

(1.) Crimes, affecting the *habitations* of individuals are, 1. *Arson*. 2. *Burglary*.

(2.) *Arson* is the malicious and wilful burning of the house, or out-house, of another man. This is felony: in some cases within, in others without, clergy.

(3.) *Burglary* is the breaking and entering, by night, into a mansion house: with intent to commit a felony. This is felony, without clergy.

SECT. XVII. *Of Offences against Private Property.*

cxviiii.

(1.) Crimes affecting the private *property* of individuals are, 1. *Larciny*. 2. *Malicious mischief*. 3. *Forgery*.

(2.) *Larciny* is, 1. *Simple*. 2. *Mixed or compound*.

(3.) *Simple larciny* is the felonious taking, and carrying away, of the personal goods of another. And it is, 1. *Grand larciny*; being above the value of twelve pence. Which is felony; in some cases within, in others without, clergy. 2. *Petit larciny*; to the value of twelvence or under. Which is also felony, but not capital; being punished with whipping, or transportation.

(4.) *Mixed, or compound, larciny*, is that wherein the taking is accompanied with the aggravation of being, 1. From the *house*. 2. From the *person*.

(5.) *Larcinies from the house*, by day or night, are felonies without clergy, when they are, 1. *Larcinies, above twelve pence, from a church*; or by breaking a tent or booth in a market or fair, by day or night, the owner or his family being therein;—or by breaking a dwelling house by day, any person being therein;—or from a dwelling house by day, without breaking, any person therein being put in fear;—or from a dwelling house by night, without breaking, the owner, or his family being therein and put in fear. 2. *Larcinies, of five shillings, by breaking the dwelling house, shop, or warehouse by day, though no person be therein;—or, by privately stealing in any shop, warehouse, coach-house, or stable, by day or night, without breaking, and though no person be therein.* 3. *Larcinies, of forty shillings, from a dwelling house or its out-houses, without breaking, and though no person be therein.*

(6.) *Larciny from the person* is, 1. *By privately stealing, from the person of another, above the value of twelve pence.* 2. *By robbery*; or the felonious and forcible taking, from the person of another, in or near the highway, goods or money of any value, by putting him in fear. These are both felonies without clergy. An attempt to rob is also felony.

(7.) *Malicious mischief*, by destroying dykes, goods, cattle, ships, garments, fish ponds, trees, woods, churches, chapels, meeting-houses, houses, out-houses, corn, hay, straw, sea or river banks, hop-binds, coal-mines (or engines thereunto belonging), or any fences for enclo-

tures by act of parliament, is felony; and, in most cases, without benefit of clergy.

(8.) *Forgery* is the fraudulent making or alteration of a writing, in prejudice of another's right. Penalties: fine; imprisonment; pillory; loss of nose and ears; forfeiture; judgement of felony, without clergy.

Law of
England
Epitomised.

SECT. XVIII. *Of the Means of Preventing Offences.*

(1.) Crimes and misdemeanors may be prevented, by compelling suspected persons to give *security*: which is effected by binding them in a conditional recognizance to the king, taken in court, or by a magistrate.

(2.) These recognizances may be conditioned, 1. To keep the *peace*. 2. To be of *good behaviour*.

(3.) They may be taken by any justice or conservator of the peace, at his own discretion; or, at the request of such as are entitled to demand the same.

(4.) All persons, who have given sufficient cause to apprehend an intended breach of the peace, may be bound over to keep the *peace*; and all those, that be not of good fame, may be bound to the *good behaviour*; and may, upon refusal in either case, be committed to gaol.

SECT. XIX. *Of Courts of Criminal Jurisdiction.*

(1.) In the method of *punishment* may be considered, 1. The several *courts* of criminal jurisdiction. 2. The several *proceedings* therein.

(2.) The *criminal courts* are, 1. Those of a *public* and general jurisdiction throughout the realm. 2. Those of a *private* and special jurisdiction.

(3.) *Public criminal courts* are, 1. The high court of parliament; which proceeds by impeachment. 2. The court of the lord high steward; and the court of the king in full parliament: for the trial of capitally indicted peers. 3. The court of king's bench. 4. The court of chivalry. 5. The court of admiralty, under the king's commission. 6. The courts of oyer and terminer, and general gaol delivery. 7. The court of quarter sessions of the peace. 8. The sheriff's tourn. 9. The court leet. 10. The court of the coroner. 11. The court of the clerk of the market.

(4.) *Private criminal courts* are, 1. The court of the lord steward, &c. by statute of Henry VII. 2. The court of the lord steward, &c. by statute of Henry VIII. 3. The university courts.

SECT. XX. *Of Summary Convictions.*

(1.) Proceedings in criminal courts are, 1. *Summary*. 2. *Regular*.

(2.) *Summary proceedings* are such, whereby a man may be convicted of divers offences, without any formal process or jury, at the discretion of the judge or judges appointed by act of parliament, or common law.

(3.) Such are, 1. Trials of offences and frauds against the laws of *excise* and other branches of the king's *revenue*. 2. Convictions before *justices* of the *peace* upon a variety of minute offences, chiefly against the

cxl.

cxli.

cxlii.

the public police. 3. *Attachments* for contempts to the superior courts of justice.

king's person or government: or, 2. Filed by the master of the crown office (with leave of the court of king's bench) at the relation of some private subject for other gross and notorious misdemeanors. All differing from indictments in this; that they are exhibited by the informer, or the king's officer; and not on the oath of a grand jury.

Law of England Epitomised.

SECT. XXI. *Of Arrests.*

(1.) Regular proceedings in the courts of common law, are, 1. *Arrest*. 2. *Commitment and bail*. 3. *Prosecution*. 4. *Process*. 5. *Arraignment*, and its incidents. 6. *Plea and issue*. 7. *Trial and conviction*. 8. *Clergy*. 9. *Judgement*, and its consequences. 10. *Reversal of judgement*. 11. *Reprieve or pardon*. 12. *Execution*.

(2.) An *arrest* is the apprehending, or restraining, of one's person; in order to be forthcoming to answer a crime whereof one is accused or suspected.

(3.) This may be done, 1. By warrant. 2. By an officer, without warrant. 3. By a private person, without warrant. 4. By hue and cry.

SECT. XXII. *Of Commitment and Bail.*

(1.) Commitment is the confinement of one's person in prison, for safe custody, by warrant from proper authority; unless, in bailable offences, he puts in sufficient *bail*, or security for his future appearance.

(2.) The magistrate is bound to take reasonable bail, if offered; unless the offender be not bailable.

(3.) Such are, 1. Persons accused of treason; or, 2. Of murder; or, 3. Of manslaughter, by indictment; or if the prisoner was clearly the slayer. 4. Prison breakers, when committed for felony. 5. Outlaws. 6. Those who have abjured the realm. 7. Approvers, and appellees. 8. Persons taken with the mainour. 9. Persons accused of arson. 10. Excommunicated persons.

(4.) The magistrate may, at his discretion, admit to bail, or otherwise, persons not of good fame, charged with other felonies, whether as principals or as accessories.

(5.) If they be of good fame, he is bound to admit them to bail.

(6.) The court of king's bench, or its judges in time of vacation, may bail in any case whatsoever.

SECT. XXIII. *Of the Several Modes of Prosecution.*

(1.) Prosecution, or the manner of accusing offenders, is either by a previous finding of a grand jury; as, 1. By *presentment*. 2. By *indictment*. Or, without such finding. 3. By *information*. 4. By *appeal*.

(2.) A *presentment* is the notice taken by a grand jury of any offence, from their own knowledge or observation.

(3.) An *indictment* is a written accusation of one or more persons of a crime or misdemeanor, preferred to, and presented on oath by, a grand jury; expressing with sufficient certainty, the person, time, place, and offence.

(4.) An *information* is, 1. At the suit of the king and a subject, upon penal statutes. 2. At the suit of the king only. Either, 1. Filed by the attorney general *ex officio*, for such misdemeanors as affect the

(5.) An *appeal* is an accusation or suit, brought by one private subject against another, for larceny, rape, mayhem, arson, or homicide: which the king cannot discharge or pardon, but the party alone can release.

SECT. XXIV. *Of Process upon an Indictment.*

(1.) Process to bring in an offender, when indicted in his absence, is, in misdemeanors, by *venire facias*, distress infinite, and *capias*: in capital crimes, by *capias* only: and, in both, by outlawry.

(2.) During this stage of proceedings, the indictment may be removed into the court of king's bench from any inferior jurisdiction, by writ of *certiorari facias*: and cognizance must be claimed in places of exclusive jurisdiction.

SECT. XXV. *Of Arraignment, and its Incidents.*

(1.) Arraignment is the calling of the prisoner to the bar of the court, to answer the matter of the indictment.

(2.) Incident hereunto are, 1. The standing mute of the prisoner: for which, in petit treason, and felonies of death, he shall undergo the *peine fort et dure*. 2. His confession; which is either *simple*, or by way of *approvement*.

SECT. XXVI. *Of Plea, and its Issue.*

(1.) The *plea*, or defensive matter alleged by the prisoner, may be, 1. A plea to the jurisdiction. 2. A demurrer in point of law. 3. A plea in abatement. 4. A special plea in bar; which is, 1st, *Auterfoits acquit*; 2dly, *Auterfoits convict*; 3dly, *Auterfoits attain*; 4thly, A pardon. 5. The general issue, not guilty.

(2.) Hereupon *issue* is joined by the clerk of the arraigns, on behalf of the king.

SECT. XXVII. *Of Trial, and Conviction.*

(1.) Trials of offences, by the laws of England, were and are, 1. By *ordeal*, of either fire or water. 2. By the *corsned*. Both these have been long abolished. 3. By *battel*, in appeals and improvements. 4. By the *peers* of Great Britain. 5. By *jury*.

(2.) The method and process of trial by *jury* is, 1. The impannelling of the jury. 2. Challenges; 1st, for cause; 2dly, peremptory. 3. *Tales de circumstantibus*. 4. The oath of the jury. 5. The evidence. 6. The verdict, either general or special.

(3.) *Conviction* is when the prisoner pleads, or is found guilty: whereupon, in felonies, the prosecutor is entitled to, 1. His expences. 2. Restitution of his goods.

Law of
England
Epitomised.

cl.

SECT. XXVIII. *Of the Benefit of Clergy.*

(1.) Clergy, or the benefit thereof, was originally derived from the usurped jurisdiction of the Popish ecclesiastics; but hath since been new-modelled by several statutes.

(2.) It is an exemption of the clergy from any other secular punishment for felony, than imprisonment for a year, at the court's discretion; and it is extended likewise, absolutely, to lay peers, for the first offence; and to all lay-commoners, for the first offence also, upon condition of branding, imprisonment, or transportation.

(3.) All felonies are entitled to the benefit of clergy, except such as are now ousted by particular statutes.

(4.) Felons, on receiving the benefit of clergy, (though they forfeit their goods to the crown), are discharged of all clergyable felonies before committed, and restored in all capacities and credits.

SECT. XXIX. *Of Judgement, and its Consequences.*

cli.

(1.) Judgement (unless any matter be offered in arrest thereof) follows upon conviction; being the pronouncing of that punishment which is expressly ordained by law.

(2.) *Attainder* of a criminal is the immediate consequence, 1. Of having judgement of death pronounced upon him. 2. Of outlawry for a capital offence.

(3.) The consequences of attainder are, 1. *Forfeiture* to the king. 2. *Corruption of blood.*

(4.) *Forfeiture* to the king is, 1. Of real estates, upon attainder;—in high treason, absolutely, till the death of the late Pretender's sons;—in felonies, for the king's year, day, and waste;—in misprison of treason, assaults on a judge, or battery sitting the courts; during the life of the offender. 2. Of personal estates, upon conviction; in all treason, misprison of treason, felony, excusable homicide, petit larceny, standing mute upon arraignment, the above-named contempts of the king's courts, and flight.

(5.) *Corruption of blood* is an utter extinction of all inheritable quality therein: so that, after the king's forfeiture is first satisfied, the criminal's lands escheat to

the lord of the fee; and he can never afterwards inherit, be inherited, or have any inheritance derived through him.

Law
eng.
Epitom.

SECT. XXX. *Of Reversal of Judgement.*

(1.) Judgements, and their consequences, may be avoided, 1. By *falsifying*, or *reversing*, the attainder. 2. By *reprieve*, or *pardon*.

(2.) Attainders may be *falsified*, or *reversed*. 1. Without a writ of error; for matter *dehors* the record. 2. By writ of error; for mistakes in the judgement, or record. 3. By act of parliament; for favour.

(3.) When an *outlawry* is reversed, the party is restored to the same plight as if he had appeared upon the *capias*. When a *judgement*, on conviction, is reversed, the party stands as if never accused.

SECT. XXXI. *Of Reprieve, and Pardon.*

(1.) A reprieve is a temporary suspension of the judgement, 1. *Ex arbitrio judicis*. 2. *Ex necessitate legis*; for pregnancy, insanity, or the trial of identity of person, which must always be tried *instantier*.

(2.) A pardon is a permanent avoider of the judgement by the king's majesty, in offences against his crown and dignity; drawn in due form of law, allowed in open court, and thereby making the offender a new man.

(3.) The king cannot pardon, 1. Imprisonment of the subject beyond the seas. 2. Offences prosecuted by appeal. 3. Common nuisances. 4. Offences against popular or penal statutes, after information brought by a subject. Nor is his pardon pleadable to an impeachment by the commons in parliament.

SECT. XXXII. *Of Execution.*

(1.) Execution is the completion of human punishment, and must be strictly performed in the manner which the law directs.

(2.) The warrant for execution is sometimes under the hand and seal of the judge; sometimes by writ from the king; sometimes by rule of court; but commonly by the judges signing the calendar of prisoners, with their separate judgements in the margin.

PART III. THE LAW OF SCOTLAND.

GENERAL OBSERVATIONS.

1. THE municipal law of Scotland, as of most other countries, consists partly of statutory or written law, which has the express authority of the legislative power; partly of customary or unwritten law, which derives force from its presumed or tacit consent.

2. Under our statutory or written law is comprehended, (1.) Our acts of parliament: not only those which were made in the reign of James I. of Scotland, and from thence down to our union with England in 1707, but such of the British statutes enacted since the Union as concerned this part of the united kingdom.

3. The remains of our ancient written law were published by Sir John Skene, clerk register, in the beginning of the last century, by license of parliament. The books of *Regiam Majestatem*, to which the whole collection owes its title, seem to be a system of Scots law, written by a private lawyer at the command of David I.; and though no express confirmation of that treatise by the legislature appears, yet it is admitted to have been the ancient law of our kingdom by express statutes. The borough laws, which were also enacted by the same King David, and the statutes of William, Alexander II. David II. and the three Roberts, are universally allowed to be genuine. Our parliaments have once and again appointed commissions to revise and amend

clv.
Municipal
law.

Statutory
law.
Acts of par-
liament.

cliv.

Regiam
Majesta-
tem.

amend

amend the *Regiam Majestatem*, and the other ancient books of our law, and to make their report: but as no report appears to have been made, nor consequently any ratification by parliament, none of these remains are received, as of proper authority, in our courts; yet they are of excellent use in proving and illustrating our most ancient customs.

4. Our written law comprehends, (2.) The acts of *federunt*, which are ordinances for regulating the forms of proceeding before the court of session in the administration of justice, made by the judges, who have a delegated power from the legislature for that purpose. Some of these acts dip upon matter of right, which declare what the judges apprehend to be the law of Scotland, and what they are to observe afterwards as a rule of judgement.

5. The civil, or Roman and canon laws, though they are not perhaps to be deemed proper parts of our written law, have undoubtedly had the greatest influence in Scotland. The powers exercised by our sovereigns and judges have been justified upon no other ground, than that they were conformable to the civil or canon laws; and a special statute was judged necessary, upon the Reformation, to rescind such of their constitutions as were repugnant to the Protestant doctrine. From that period, the canon law has been little respected, except in questions of tithes, patronages, and some few more articles of ecclesiastical right: but the Roman continues to have great authority in all cases where it is not derogated from by statute or custom, and where the genius of our law suffers us to apply it.

6. Our unwritten or customary law, is that which without being expressly enacted by statute, derives its force from the tacit consent of king and people; which consent is presumed from the ancient custom of the community. Custom, as it is equally founded in the will of the lawgiver with written law, has therefore the same effects: hence, as one statute may be explained or repealed by another, so a statute may be explained by the uniform practice of the community, and even go into disuse by a posterior contrary custom. But this power of custom to derogate from prior statutes is generally confined by lawyers to statutes concerning private right, and does not extend to those which regard public policy.

7. An uniform tract of the judgements or decisions of the court of session is commonly considered as part of our customary law; and without doubt, where a particular custom is thereby fixed or proved, such custom of itself constitutes law: but decisions, though they bind the parties litigating, have not, in their own nature, the authority of law in similar cases; yet, where they continue uniform, great weight is justly laid on them. Neither can the judgements of the house of peers of Great Britain reach farther than to the parties in the appeal, since in these the peers act as judges, not as lawgivers.

8. Though the laws of nature are sufficiently published by the internal suggestion of natural light, civil laws cannot be considered as a rule for the conduct of life, till they are notified to those whose conduct they are to regulate. The *Scots* acts of parliament were, by our most ancient custom, proclaimed in all the different shires, boroughs, and baron courts, of the kingdom.

But after our statutes came to be printed, that custom was gradually neglected; and at last, the publication of our laws, at the market-cross of Edinburgh, was declared sufficient; and they became obligatory 40 days thereafter. British statutes are deemed sufficiently notified, without formal promulgation; either because the printing is truly a publication; or because every subject is, by a maxim of the English law, party to them, as being present in parliament, either by himself or his representative. After a law is published, no pretence of ignorance can excuse the breach of it.

9. As laws are given for the rule of our conduct, they can regulate future cases only; for past actions, being out of our power, can admit of no rule. Declaratory laws form no exception to this; for a statute, where it is declaratory of a former law, does no more than interpret its meaning; and it is included in the notion of interpretation, that it must draw back to the date of the law interpreted.

10. By the rules of interpreting statute law received in Scotland, an argument may be used from the title to the act itself, *à rubro ad nigrum*; at least, where the rubric has either been originally framed, or afterwards adopted by the legislature. The preamble or narrative, which recites the inconveniences that had arisen from the former law; and the causes inducing the enactment, may also lead a judge to the general meaning of the statute. But the chief weight is to be laid on the statutory words.

11. Laws, being directed to the unlearned as well as the learned, ought to be construed in their most obvious meaning, and not explained away by subtle distinctions; and no law is to suffer a figurative interpretation, where the proper sense of the words is as commodious, and equally fitted to the subject of the statute. Laws ought to be explained so as to exclude absurdities, and in the sense which appears most agreeable to former laws; to the intention of the lawgiver, and to the general frame and structure of the constitution. In prohibitory laws, where the right of acting is taken from a person, solely for the private advantage of another, the consent of him, in whose behalf the law was made, shall support the act done in breach of it; but the consent of parties immediately interested has no effect in matters which regard the public utility of a state. Where the words of a statute are capable but of one meaning, the statute must be observed, however hard it may bear on particular persons. Nevertheless, as no human system of laws can comprehend all possible cases, more may sometimes be meant by the lawgiver than is expressed; and hence certain statutes, where extension is not plainly excluded, may be extended beyond the letter, to similar and omitted cases: others are to be confined to the statutory words.

12. A strict interpretation is to be applied, (1.) To correctory statutes, which repeal or restrict former laws; and to statutes which enact heavy penalties, or restrain the natural liberties of mankind. (2.) Laws, made on occasion of present exigencies in a state, ought not to be drawn to similar cases, after the pressure is over. (3.) Where statutes establish certain solemnities as requisite to deeds, such solemnities are not suppliable by equivalents; for solemnities lose their nature, when they are not performed specifically. (4.) A statute, which enumerates special cases, is, with difficulty, to be extended

Law of Scotland.

Interpretation of laws.

Strict.

Law of
Scotland.

tended to cases not expressed; but, where a law does not descend to particulars, there is greater reason to extend it to similar cases. (5.) Statutes, which carry a dispensation or privilege to particular persons or societies, suffer a strict interpretation; because they derogate from the general law, and imply a burden upon the rest of the community. But at no rate can a privilege be explained to the prejudice of those in whose behalf it was granted. As the only foundation of customary law is usage, which consists in fact, such law can go no farther than the particular usage has gone.

Ample.

13. All statutes, concerning matters specially favoured by law, receive an ample interpretation; as laws for the encouragement of commerce, or of any useful public undertaking, for making effectual the wills of dying persons, for restraining fraud, for the security of creditors, &c. A statute, though its subject matter should not be a favourite of the law, may be extended to similar cases, which did not exist when the statute was made; and for which, therefore, it was not in the lawgiver's power to provide.

14. Every statute, however unfavourable, must receive the interpretation necessary to give it effect: and, on the other hand, in the extension of favourable laws, scope must not be given to the imagination, in discovering remote resemblances; the extension must be limited to the cases immediately similar. Where there is ground to conclude that the legislature has omitted a case out of the statute purposely, the statute cannot be extended to that case, let it be ever so similar to the cases expressed.

15. The objects of the laws of Scotland, according to Mr Erskine, one of the latest writers on the subject, are, Persons, Things, and Actions.

CHAP. I. Of PERSONS.

AMONG persons, judges, who are invested with jurisdiction, deserve the first consideration.

SECT. I. Of Jurisdiction and Judges in General.

divi.
Jurisdiction.

Jurisdiction is a power conferred upon a judge or magistrate, to take cognizance of and decide causes according to law, and to carry his sentences into execution. That tract of ground, or district, within which a judge has the right of jurisdiction, is called his *territory*: and every act of jurisdiction exercised by a judge without his territory, either by pronouncing sentence, or carrying it into execution, is null.

King the
fountain of
jurisdiction.

2. The supreme power, which has the right of enacting laws, falls naturally to have the right of erecting courts, and appointing judges, who may apply these laws to particular cases: but, in Scotland, this right has been always intrusted with the crown, as having the executive power of the state.

Distinctions
of jurisdic-
tion.

3. Jurisdiction is either supreme, inferior, or mixed. That jurisdiction is supreme, from which there lies no appeal to a higher court. Inferior courts are those whose sentences are subject to the review of the supreme courts, and whose jurisdiction is confined to a particular territory. Mixed jurisdiction participates of the nature both of the supreme and inferior: thus the judge of the high court of admiralty, and the com-

missaries of Edinburgh, have an universal jurisdiction over Scotland, and they can review the decrees of inferior admirals and commissaries: but since their own decrees are subject to the review of the courts of session or justiciary, they are, in that respect, inferior courts.

Law
Scotl

4. Jurisdiction is either civil or criminal: by the first, questions of private right are decided; by the other, crimes are punished. But, in all jurisdiction, though merely civil, there is a power inherent in the judge to punish either corporally, or by a pecuniary fine, those who offend during the proceedings of the court, or who shall afterwards obstruct the execution of the sentence.

5. Jurisdiction is either privative or cumulative. Privative jurisdiction, is that which belongs only to one court, to the exclusion of all others. Cumulative, otherwise called *concurrent*, is that which may be exercised by any one of two or more courts, in the same cause. In civil cumulative jurisdiction, the private pursuer has the right of election before which of the courts he shall sue; but as, in criminal questions which are prosecuted by a public officer of court, a collision of jurisdiction might happen, through each of the judges claiming the exercise of their right, that judge, by whose warrant the delinquent is first cited or apprehended (which is the first step of jurisdiction), acquires thereby (*jure preventionis*) the exclusive right of judging the cause.

6. All rights of jurisdiction, being originally granted in consideration of the fitness of the grantee, were therefore personal, and died with himself. But, upon the introduction of the feudal system, certain jurisdictions were annexed to lands, and descended to heirs, as well as the lands to which they were annexed; but now all heritable jurisdictions, except those of admiralty and a small pittance reserved to barons, are either abolished, or resumed and annexed to the crown.

7. Jurisdiction is either proper or delegated. Proper jurisdiction, is that which belongs to a judge or magistrate himself, in virtue of his office. Delegated, is that which is communicated by the judge to another who acts in his name, called a *depute* or *deputy*. Where a deputy appoints one under him, he is called *substitute*. No grant of jurisdiction, which is an office requiring personal qualifications, can be delegated by the grantee to another, without an express power in the grant.

8. Civil jurisdiction is founded, 1. *Ratione domicilii*, Civil jurisdiction, wherein founded if the defender has his domicile within the judge's territory. A domicile is the dwelling place where a person lives with an intention to remain; and custom has fixed it as rule, that residence for 40 days founds jurisdiction. If one has no fixed dwelling place, e. g. a soldier, or a travelling merchant, a personal citation against him within the territory is sufficient to found the judge's jurisdiction over him, even in civil questions. As the defender is not obliged to appear before a court to which he is not subject, the pursuer must follow the defender's domicile.

9. It is founded, 2. *Ratione rei sitæ*, if the subject in question lie within the territory. If that subject be immovable, the judge, whose jurisdiction is founded in this way, is the sole judge competent, excluding the judge of the domicile.

law of Scotland.
letters of prement.

10. Where one, who has not his domicile within the territory, is to be sued before an inferior court, *ratione rei sitæ*, the court of session must be applied to, whose jurisdiction is universal, and who, of course, grants letters of supplement to cite the defender to appear before the inferior judge. Where the party to be sued resides in another kingdom, and has an estate in this, the court of session is the only proper court, as the *commune forum* to all persons residing abroad; and the defender, if his estate be heritable, is considered as lawfully summoned to that court, by a citation at the market cross of Edinburgh, and pier and shore of Leith: but where a stranger, not a native of Scotland, has only a moveable estate in this kingdom, he is deemed to be so little subject to the jurisdiction of our courts, that action cannot be brought against him till his effects be first attached by an arrestment *jurisdictionis fundandæ causæ*; which is laid on by a warrant issuing from the supreme courts of session, or admiralty, or from that within whose territory the subject is situated, at the suit of the creditor.

arrestment
strangers.

11. A judge may, in special cases, arrest or secure the persons of such as have neither domicile nor estate within his territory, even for civil debts. Thus, on the border between Scotland and England, warrants are granted of course by the judge-ordinary of either side, against those who have their domicile upon the opposite side, for arresting their persons, till they give caution *judicio sibi*; and even the persons of citizens or natives may be so secured, where there is just reason to suspect that they are *in meditazione fugæ*, i. e. that they intend suddenly to withdraw from the kingdom; upon which suspicion, the creditor who applies for the warrant must make oath. An inhabitant of a borough-royal, who has furnished one who lives without the borough in meat, clothes, or other merchandise, and who has no security for it but his own account book, may arrest his debtor, till he give security *judicio sibi*.

bounds of
jurisdiction.

12. A judge may be declined, i. e. his jurisdiction disowned judicially, 1. *Ratione causæ*, from his incompetency to the special cause brought before him. 2. *Ratione suspecti judicis*; where either the judge himself, or his near kinsman, has an interest in the suit. No judge can vote in the cause of his father, brother, or son, either by consanguinity or affinity; nor in the cause of his uncle or nephew by consanguinity. 3. *Ratione privilegii*; where the party is by privilege exempted from their jurisdiction.

prorogated
jurisdiction.

13. Prorogated jurisdiction (*jurisdictione in consentientibus*) is that which is, by the consent of parties, conferred upon a judge, who without such consent, would be incompetent. Where a judge is incompetent, every step he takes must be null, till his jurisdiction be made competent by the party's actual submission to it. It is otherwise where the judge is competent, but may be declined by the party upon privilege.

14. In order to prorogation, the judge must have jurisdiction, such as may be prorogated. Hence, prorogation cannot be admitted where the judge's jurisdiction is excluded by statute. Yet where the cause is of the same nature with those to which the judge is competent, though law may have confined his jurisdiction within a certain sum, parties may prorogate it above that sum unless where prorogation is prohibited. Prorogation is not admitted in the king's causes; for the

interest of the crown cannot be hurt by the negligence of its officers.

Law of Scotland.

15. All judges must at their admission swear, 1. The oath of allegiance, and subscribe the assurance; 2. The oath of abjuration; 3. The oath of supremacy; lastly, The oath *de fidei administratione*.

Oaths of judges.

16. A party who has either properly declined the jurisdiction of the judge before whom he had been cited, or who thinks himself aggrieved by any proceedings in the cause, may, before decree, apply to the court of session to issue letters of advocation for calling the action from before the inferior court to themselves. The grounds, therefore, upon which a party may pray for letters of advocation, are incompetency and iniquity. Under incompetency, is comprehended not only defect of jurisdiction, but all the grounds of declining a jurisdiction, in itself competent, arising either from suspicion of the judge, or privilege in the parties. A judge is said to commit iniquity, when he either delays justice, or pronounces sentence, in the exercise of his jurisdiction, contrary to law.

Letters of advocation.

17. That the court of session may not waste their time in trivials, no cause for a sum below twelve pounds sterling can be advocated to the court of session from the inferior judge competent: but if an inferior judge shall proceed upon a cause to which he is incompetent, the cause may be carried from him by advocation, let the subject be ever so inconsiderable.

Advocation how limited.

SECT. II. *Of the Supreme Judges and Courts of Scotland.*

clvii.

1. The king, who is the fountain of jurisdiction, might by our constitution have judged in all causes, either in his own person, or by those whom he was pleased to vest with jurisdiction.

King, and

2. The parliament of Scotland, as our court of the last resort, had the right of reviewing the sentences of all our supreme courts.

Parliament.

3. By the treaty of Union, 1707, the parliaments of Scotland and England are united into one parliament of Great Britain. From this period, the British house of peers, as coming in place of the Scots parliament, is become our court of the last resort, to which appeals lie from all the supreme courts of Scotland: but that court has no original jurisdiction in civil matters in which they judge only upon appeal. By art. 22. of that treaty, the Scots share of the representation in the house of peers is fixed to 16 Scots peers elective; and in the house of commons, to 45 commoners, of which 30 are elected by the freeholders of counties, and 15 by the royal boroughs. The Scots privy council was also thereupon abolished, and sunk into that of Great Britain, which for the future is declared to have no other powers than the English privy council had at the time of the union.

Parliament of Great Britain.

4. A court was erected in 1425, consisting of certain persons to be named by the king, out of the three estates of parliament, which was vested with the jurisdiction formerly lodged in the council, and got the name of the *session*, because it was ordained to hold annually a certain number of sessions at the places to be specially appointed by the king. This court had a jurisdiction, cumulative with the judge ordinary, in spuilzies, and other possessory actions, and in debts;

Court of session.

Law of
Scotland.

but they had no cognizance in questions of property of heritable subjects. No appeal lay from its judgements to the parliament. The judges of this court served by rotation, and were changed from time to time, after having sat 40 days; and became so negligent in the administration of justice, that it was at last thought necessary to transfer the jurisdiction of this court to a council to be named by the king, called the *daily council*.

College of
justice.

5. The present model of the court of session, or college of justice, was formed in the reign of James V. The judges thereof, who were vested with an universal civil jurisdiction, consisted originally of seven churchmen, seven laymen, and a president, whom it behoved to be a prelate; but spiritual judges were in 1584 partly, and in 1640 totally, prohibited. The judges of session have been always received by warrants from the crown. Anciently his majesty seems to have transferred to the court itself the right of choosing their own president; and in a sederunt recorded June 26. 1593, the king condescended to present to the lords, upon every vacancy in the bench, a list of three persons, out of which they were to choose one. But his majesty soon resumed the exercise of both rights, which continued with the crown till the usurpation; when it was ordained that the king should name the judges of the session, by the advice of parliament. After the Restoration, the nomination was again declared to be solely in the sovereign.

Judges, by
whom named.

Their qualifications
and trial.

6. Though judges may, in the general case, be named at the age of 21 years, the lords of session must be at least 25. No person can be named lord of session, who has not served as an advocate or principal clerk of session for five years, or as a writer to the signet for ten: and in the case of a writer to the signet, he must undergo the ordinary trials upon the Roman law, and be found qualified two years before he can be named. Upon a vacancy in the bench, the king presents the successor by a letter addressed to the lords, wherein he requires them to try and admit the person presented. The powers given to them to reject the presentee upon trial are taken away, and a bare liberty to remonstrate substituted in its place.

7. Besides the 15 ordinary judges, the king was allowed to name three or four lords of his great council, who might sit and vote with them. These extraordinary lords were suppressed in the reign of Geo. I.

Privileges
of the college of
justice.

8. The appellation of the *college of justice* is not confined to the judges, who are distinguished by the name of *senators*; but comprehends advocates, clerks of session, writers to the signet, and others, as described, *MS.* 23d Feb. 1687. Where, therefore, the college of justice is entitled to any privilege, it extends to all the members of the college. They are exempted from watching, warding, and other services within borough; and from the payment of ministers stipends, and of all customs, &c. imposed upon goods carried to or from the city of Edinburgh. Part of these privileges and immunities were lately called in question by the city of Edinburgh; but they were found by the court of session (affirmed upon appeal) to be in full force.

Jurisdiction
of the session.

9. Though the jurisdiction of the session be properly limited to civil causes, the judges have always sustained themselves as competent to the crime of falsehood.

Where the falsehood deserves death or demembration, they, after finding the crime proved, remit the criminal to the court of justiciary. Special statute has given to the court of session jurisdiction in contraventions of law-burrows, deforcements, and breach of arrestment; and they have been in use to judge in battery *pendente lite*, and in usury.

Law
Scotla

10. In certain civil causes, the jurisdiction of the session is exclusive of all inferior jurisdictions; as in declarators of property, and other competitions of heritable rights, proving of the tenor, *cessiones bonorum*, restitution of minors, reductions of decrees or of writings, sales of the estates of minors or bankrupts, &c. In a second class of causes, their jurisdiction can be only exercised in the way of review, after the cause is brought from the inferior court; as in maritime and consistorial causes, which must be pursued in the first instance before the admiral or commissary; and in actions, below twelve pounds sterling, which must be commenced before the judge ordinary. In all civil actions, which fall under neither of these classes, the jurisdiction of the session is concurrent, even in the first instance, with that of the judge ordinary. The session may proceed as a court of equity by the rules of conscience, in abating the rigour of law, and giving aid in proper cases to such as in a court of law can have no remedy: and this power is inherent in the supreme court of every country, where separate courts are not established for law and for equity.

This court formerly met upon the 12th day of June and rose upon the 11th day of August for the summer session: but now, in consequence of an act passed in the session of parliament 1790, it meets on the 12th of May and rises on the 11th of July for the summer session; the winter sederunt still remaining as formerly, viz. from the 12th of November to the 11th of March inclusive.

11. The supreme criminal judge was styled the *Justiciar*; and he had anciently an universal civil jurisdiction, even in matters of heritage. He was obliged to hold two justice courts or ayres yearly at Edinburgh or Peebles, where all the freeholders of the kingdom were obliged to attend. Besides this universal court, special justice ayres were held in all the different shires in the kingdom twice in the year. These last having gone into disuse, eight deputies were appointed, two for every quarter of the kingdom, who should make their circuits over the whole in April and October.

12. The office of deputies was suppressed in 1672; and five lords of session were added, as commissioners of justiciary, to the justice general and justice clerk. The justice general, if present, is constant president of the court, and in his absence the justice clerk. The kingdom is divided into three districts, and two of the judges are appointed to hold circuits in certain boroughs of each district twice in the year; one judge may proceed to business in the absence of his colleague. In trials before this court the evidence was always taken down in writing till the act 23d Geo. III. was passed; by which the judges may try and determine all causes by the verdict of an assize upon examining the witnesses *viva voce*, without reducing the testimony into writing, unless it shall appear more expedient to proceed in the

the

Law of
Scotland.

the former way, which they have it in their power to do. This act was at first temporary, but is now made perpetual by 27th Geo. III. cap. 18.

13. By an old statute, the crimes of robbery, rape, murder and wilful fire-raising (the four pleas of the crown), are said to be reserved to the king's court of judicary; but the only crime in which, *de praxi*, the jurisdiction of judicary became at last exclusive of all inferior criminal jurisdiction, was that of high treason. The court of judicary, when sitting at Edinburgh, has a power of advocating causes from all inferior criminal judges, and of suspending their sentences.

14. The circuit court can also judge in all criminal causes which do not infer death or demerement, upon appeal from any inferior court within their district; and has a supreme civil jurisdiction, by way of appeal, in all causes not exceeding twelve pounds sterling, in which their decrees are not subject to review; but no appeal is to lie to the circuit, till the cause be finally determined in the inferior court.

Court of
exchequer.

15. The court of exchequer, as the king's chamberlain court, judged in all questions of the revenue. In pursuance of the treaty of Union, that court was abolished, and a new court erected, consisting of the lord high treasurer of Great Britain, and a chief baron, with four other barons of exchequer; which barons are to be made of serjeants at law, English barristers, or Scots advocates of five years standing. This court has a privative jurisdiction conferred upon it, as to the duties of customs, excise, or other revenues appertaining to the king or prince of Scotland, and as to all honours and estates that may accrue to the crown; in which matters, they are to judge by the forms of proceeding used in the English court of exchequer, under the following limitations: That no debt due to the crown shall affect the debtor's real estate in any other manner than such estate may be affected by the laws of Scotland, and that the validity of the crown's titles to any honours or lands shall continue to be tried by the court of session. The barons have the powers of the Scots court transferred to them, of passing the accounts of sheriffs, or other officers who have the execution of writs issuing from, or returnable to, the court of exchequer, and of receiving resignations, and passing signatures of charters, gifts of casualties, &c. But though all these must pass in exchequer, it is the court of session only who can judge of their preference after they are completed.

Admiralty
Court.

16. The jurisdiction of the admiral in maritime causes was of old concurrent with that of the session. The high admiral is declared the king's justice general upon the seas, on fresh water within flood mark, and in all harbours and creeks. His civil jurisdiction extends to all maritime causes; and so comprehends questions of charter parties, freights, salvages, bottomries, &c. He exercises this supreme jurisdiction by a delegate, the judge of the high court of admiralty; and he may also name inferior deputies, whose jurisdiction is limited to particular districts, and whose sentences are subject to the review of the high court. In causes which are declared to fall under the admiral's cognizance, his jurisdiction is sole; inasmuch, that the session itself, though it may review his decrees by suspension or reduction, cannot carry a maritime question from him by advocacy. The admiral has acquired, by usage, a ju-

isdiction in mercantile causes, even where they are not strictly maritime, cumulative with that of the judge ordinary.

Law of
Scotland.

17. All our supreme courts have seals or signets, pro-Signet. per to their several jurisdictions. The courts of session and judicary used formerly the same signet, which was called the king's, because the writs issuing from them run in the king's name; and though the judicary got at last a separate signet for itself, yet that of the session still retains the appellation of the *king's signet*. In this office are sealed summonses for citation, letters of executorial diligence, or for staying or prohibiting of diligence, and generally whatever passes by the warrant of the session, and is to be executed by the officers of the court. All these must, before sealing, be signed by the writers or clerks of the signet: But letters of diligence, where they are granted in a depending process, merely for probation, though they pass by the signet, must be subscribed by a clerk of session. The clerks of the signet also prepare and subscribe all signatures of charters, or other royal grants, which pass in exchequer.

SECT. III. *Of inferior Judges and Courts of Scotland.*

clviii.

1. Sheriff (from *reeve* governor, and *schere* to cut or divide) is the judge ordinary constituted by the crown over a particular division or county. The sheriff's jurisdiction, both civil and criminal, was, in ancient times, nearly as ample within his own territory as that of the supreme courts of session and judicary was over the whole kingdom.

Sheriff.

2. His civil jurisdiction now extends to all actions upon contracts, or other personal obligations; forthcoming, poindings of the ground, mails and duties; and to all possessory actions, as removings, ejections, spuilzies, &c.; to all brieves issuing from the chancery, as of inquest, terce, division, tutory, &c.; and even to adjudications of land estates, when proceeding on the renunciation of the apparent heir. His present criminal jurisdiction extends to certain capital crimes, as theft, and even murder, though it be one of the pleas of the crown; and he is competent to most questions of public police, and has a cumulative jurisdiction with justices of the peace in all riots and breaches of the peace.

3. Sheriffs have a ministerial power, in virtue of which they return juries, in order to a trial of causes that require juries. The writs for electing members of parliament have been, since the union, directed to the sheriffs, who, after they are executed, return them to the crown office from whence they issued. They also execute writs issuing from the court of exchequer; and in general, take care of all estates, duties, or casualties that fall to the crown within their territory, for which they must account to the exchequer.

4. A lord of regality was a magistrate who had a Lord of regality. grant of lands from the sovereign, with royal jurisdiction annexed thereto. His civil jurisdiction was equal to that of a sheriff; his criminal extended to the four pleas of the crown. He had a right to repledge or reclaim all criminals, subject to his jurisdiction, from any other competent court, though it were the judicary itself, to his own. He had also right, according to the most common opinion, to the single sheaf of all de-

Law of Scotland. pronounced persons residing within his jurisdiction, even though such privilege had not been expressed in the grant of regality.

Stewart. 5. The steward was the magistrate appointed by the king over such regality lands as happened to fall to the crown by forfeiture, &c. and therefore the steward's jurisdiction was equal to that of a regality. The two stewartries of Kirkcudbright, and of Orkney and Zetland, make shires and counties by themselves, and send each a representative to parliament.

Bailie. 6. Where lands not erected into a regality fell into the king's hands, he appointed a bailie over them, whose jurisdiction was equal to that of a sheriff.

7. By the late jurisdiction act, 20 Geo. II. all heritable regalities and baileries, and all such heritable sheriffships and stewartries as were only parts of a shire, are dissolved; and the powers formerly vested in them are made to devolve upon such of the king's courts as these powers would have belonged to if the jurisdictions dissolved had never been granted. All sheriffships and stewartries that were no part of a shire, where they had been granted, either heritably or for life, are resumed and annexed to the crown. No high sheriff or steward can hereafter judge personally in any cause. One sheriff or steward-depute is to be appointed by the king in every shire, who must be an advocate of three years standing; and whose office as sheriff or steward-depute is now by 28 Geo. II. held *ad vitam aut culpam*.

Prince of Scotland. 8. The appanage, or patrimony, of the prince of Scotland, has been long erected into a regality jurisdiction, called the Principality. It is personal to the king's eldest son, upon whose death or succession it returns to the crown. The prince has, or may have, his own chancery, from which his writs issue, and may name his own chamberlain and other officers for receiving and managing his revenue. The vassals of the prince are entitled to elect, or to be elected, members of parliament for counties, equally with those who hold of the crown.

9. Justices of the peace are magistrates named by the sovereign over the several counties of the kingdom, for the special purpose of preserving the public peace. Anciently their power reached little farther than to bind over disorderly persons for their appearance before the privy council or judiciary; afterwards they were authorised to judge in breaches of the peace, and in most of the laws concerning public policy. They may compel workmen or labourers to serve for a reasonable fee, and they can condemn masters in the wages due to their servants. They have power to judge in questions of highways, and to call out the tenants with their cottars and servants to perform six days work yearly for upholding them. It has been lately, however, found by the court of session, that justices have no jurisdiction whatever in common actions for debt. So that it now seems fixed, that they are incompetent in such actions, except where they are declared competent by special statute.

10. Since the union, our justices of the peace, over and above the powers committed to them by the laws of Scotland, are authorised to exercise whatever belong to the office of an English justice, in relation to the public peace. From that time, the Scots and the English commissions have run in the same style, which contains powers to inquire into and judge

in all capital crimes, witchcraft, felonies, and several others specially enumerated; with this limitation subjoined, *of which justices of the peace may lawfully inquire*. Two justices can constitute a court. Special statute has given the cognizance of several matters of excise to the justices, in which their sentences are final. As to which, and the powers thereby veiled in them, the reader must of necessity be referred to the excise laws; it not falling within the plan of this work, to enter into so very minute a detail as that would prove.

11. A borough is a body corporate, made up of the inhabitants of a certain tract of ground, erected by the sovereign, with jurisdiction annexed to it. Boroughs are erected, either to be holden of the sovereign himself, which is the general case of royal boroughs; or of the superior of the lands erected, as boroughs of regality and barony. Boroughs royal have power, by their charters, to choose annually certain office bearers or magistrates; and in boroughs of regality and barony, the nomination of magistrates is, by their charter, lodged sometimes in the inhabitants, sometimes in the superior. Bailies of boroughs have jurisdiction in matters of debt, services, and questions of possession betwixt the inhabitants. Their criminal jurisdiction extends to petty riots, and reckless fire-raiding. The dean of guild is that magistrate of a royal borough who is head of the merchant company; he has the cognizance of mercantile causes within borough; and the inspection of buildings, that they encroach neither on private property, nor on the public streets; and he may direct insufficient houses to be pulled down. His jurisdiction has no dependence on the court of the borough, or bailie court.

12. A baron, in the large sense of that word, is one who holds his lands immediately of the crown; and, as such, had, by our ancient constitution, right to a seat in parliament, however small his freehold might have been. The lesser barons were exempted from the burden of attending the service of parliament. This exemption grew insensibly into an utter disability in all the lesser barons from sitting in parliament, without election by the county; though no statute is to be found expressly excluding them.

13. To constitute a baron in the strict law sense, his lands must have been erected, or at least confirmed, by the king *in liberam baroniam*; and such baron had a certain jurisdiction, both civil and criminal, which he might have exercised, either in his own person, or by his bailie.

14. By the late jurisdiction act, the civil jurisdiction of a baron is reduced to the power of recovering from his vassals and tenants, the rents of his lands, and of condemning them in mill services; and of judging in causes where the debt and damages do not exceed 40s. sterling. His criminal jurisdiction is, by the same statute, limited to assault, batteries, and other smaller offences, which may be punished by a fine not exceeding 20s. sterling, or by setting the offender in the stocks in the day time not above three hours; the fine to be levied by poinding, or one month's imprisonment. The jurisdiction formerly competent to proprietors of mines, and coal or salt works, over their workmen, is reserved; and also that which was competent to proprietors who had the right of fairs or markets,

Law of Scotland. markets, for correcting the disorders that might happen during their continuance; provided they shall exercise no jurisdiction inferring the loss of life or demeritation.

Constabularies. 15. The high constable of Scotland had no fixed territorial jurisdiction, but followed the court; and had, jointly with the marischal, the cognizance of all crimes committed within two leagues of it. All other constabularies were dependent on him: these had castles, and sometimes boroughs, subject to their jurisdiction, as Dundee, Montrose, &c. and among other powers, now little known, they had the right of exercising criminal jurisdiction within their respective territories during the continuance of fairs. By the late jurisdiction act, all jurisdictions of constabulary are dissolved, except that of high constable.

King of arms. 16. The office of the Lyon king of arms was chiefly ministerial, to denounce war, proclaim peace, carry public messages, &c. But he has also a right of jurisdiction, whereby he can punish all who usurp arms contrary to the law of arms, and deprive or suspend messengers, heralds, or pursuivants, (who are officers named by himself); but he has no cognizance of the damage arising to the private party through the messenger's fault. Messengers are subservient to the supreme courts of Session and Jusiciary; and their proper business is to execute all the king's letters either in civil or criminal causes. They must find caution for the proper discharge of their duty *qua* messengers; and in case of any malversation, or neglect, by which damage arises to their employers, their sureties may be required upon for indemnification. These sureties, however, are not answerable for the conduct of the messenger in any other capacity but *qua* such; and therefore, if a messenger is authorized to uplift payment from a debtor, and fails to account to his employer, the cautioner is not liable; his obligation extending only to the regular and proper duties of the office in executing the diligence, or the like.

Sentence money. 17. Our judges had, for a long time, no other salaries or appointments than what arose from the sentences they pronounced. Our criminal judges applied to their own use the fines or issues of their several courts; and regalities had a right to the single escheat of all persons denounced, who resided within their jurisdiction; and our civil judges got a certain proportion of the sum contained in the decree pronounced. But these were all prohibited upon regular salaries being settled upon them.

SECT. V. Of Ecclesiastical Persons.

clix. The pope. 1. The pope, or bishop of Rome, was long acknowledged, over the western part of Christendom, for the head of the Christian church. The papal jurisdiction was abolished in Scotland anno 1560. The king was, by act 1669, declared to have supreme authority over all persons, and in all causes ecclesiastical; but this act was repealed by 1690, as inconsistent with Presbyterian church government, which was then upon the point of being established.

Clergy. 2. Before the reformation from Popery, the clergy was divided into secular and regular. The secular had a particular tract of ground given them in charge,

within which they exercised the pastoral office of bishop, presbyter, or other church officer. The regular clergy had no cure of souls; but were tied down to residence in their abbacies, priories, or other monasteries: and they got the name of *regular*, from the rules of mortification to which they were bound, according to the institution of their several orders. Upon the vacancy of any benefice, whether secular or regular, commendators were frequently appointed to levy the fruits, as factors or stewards during the vacancy. The pope alone could give the higher benefices *in commendam*; and at last, from the plenitude of his power, he came to name commendators for life, and without any obligation to account. After the Reformation, several abbacies and priories were given by James VI. *in perpetuam commendam*, to laics.

3. Upon abolishing the pope's authority, the regular clergy were totally suppressed; and in place of all the different degrees which distinguished the secular clergy, we had at first only parochial presbyters or ministers and superintendants, who had the oversight of the church within a certain district; soon thereafter the church government became episcopal by archbishops, bishops, &c.; and after some intermediate turns, is now Presbyterian by kirk sessions, presbyteries, synods, and general assemblies.

4. Prelate, in our statutes, signifies a bishop, abbot, or other dignified clergyman, who in virtue of his office had a seat in parliament. Every bishop had his chapter, which consisted of a certain number of the ministers of the diocese, by whose assistance he managed the affairs of the church within that district. The nomination of bishops to vacant sees has been in the crown since 1540, though under the appearance of continuing the ancient right of election, which was in the chapter. The confirmation by the crown under the great seal, of the chapter's election, conferred a right to the spirituality of the benefice; and a second grant upon the consecration of the bishop elect, gave a title to the temporality; but this second grant fell soon into disuse.

5. He who founded or endowed a church was entitled to the right of patronage thereof, or *advocatio ecclesie*; whereby, among other privileges, he might present a churchman to the cure, in case of a vacancy. The presentee, after he was received into the church, had a right to the benefice *proprio jure*; and if the church was parochial, he was called a *parson*. The pope claimed the right of patronage of every kirk to which no third party could show a special title; and, since the Reformation, the crown, as coming in place of the pope, is considered as universal patron, where no right of patronage appears in a subject. Where two churches are united, which had different patrons, each patron presents by turns.

6. Gentlemen of estates frequently founded colleges or collegiate churches; the head of which got the name of *provost*, under whom were certain prebendaries, or canons, who had their several stalls in the church, where they sung masses. Others of lesser fortunes founded chaplainries, which were donations granted for the singing of masses for deceased friends at particular altars in a church. Though all these were suppressed upon the Reformation, their founders continued patrons.

Law of
Scotland.

trons of the endowments; out of which they were allowed to provide bursars, to be educated in any of the universities.

7. Where a fund is gifted for the establishment of a second minister in a parish where the cure is thought too heavy for one, the patronage of such benefice does not belong to the donor, but to him who was patron of the church, unless either where the donor has reserved to himself the right of patronage in the donation, or where he and his successors have been in the constant use of presenting the second minister, without challenge from the patron. The right of presenting incumbents was by 1690, c. 23. taken from patrons, and vested in the heritors and elders of the parish, upon payment to be made by the heritors to the patron of 600 merks; but it was again restored to patrons, 10 An. c. 12. with the exception of the presentation sold in pursuance of the former act.

Patrons.

8. Patrons were not simply administrators of the church; for they held the fruits of the vacant benefice as their own for some time after the Reformation. But that right is now no more than a trust in the patron, who must apply them to pious uses within the parish, at the sight of the heritors, yearly as they fall due. If he fail, he loses his right of administering the vacant stipend for that and the next vacancy. The king, who is exempted from this rule, may apply the vacant stipend of his churches to any pious use, though not within the parish. If one should be ordained to a church, in opposition to the presentee, the patron, whose civil right cannot be affected by any sentence of a church court, may retain the stipend as vacant. Patrons are to this day entitled to a seat and burial place in the churches of which they are patrons, and to the right of all the teinds of the parish not heritably disposed.

9. That kirks may not continue too long vacant, the patron must present to the presbytery (formerly to the bishop) a fit person for supplying the cure, within six months from his knowledge of the vacancy, otherwise the right of presentation accrues to the presbytery *jure devoluto*. Upon presentation by the patron, the bishop collated or conferred the benefice upon the presentee by a writing, in which he appointed certain ministers of the diocese to induce or institute him into the church; which induction completed his right, and was performed by their placing him in the pulpit, and delivering to him the Bible and keys of the church. The bishop collated to the churches of which himself was patron, *pleno jure*, or without presentation: which he also did in mensal churches, whose patronages were sunk, by the churches being appropriated to him, as part of his patrimony. Since the Revolution, a judicial act of admission by the presbytery, proceeding either upon a presentation, or upon a call from the heritors and elders, or upon their own *jus devolutum*, completes the minister's right to the benefice.

Provisions
for the re-
formed
clergy.

10. Soon after the Reformation, the Popish churchmen were prevailed upon to resign in the sovereign's hands a third of their benefices; which was appropriated, in the first place, for the subsistence of the reformed clergy. To make this fund effectual, particular localities were assigned in every benefice, to the extent of a third, called the *assumption of thirds*; and for the farther support of ministers, Queen Mary made a grant

in their favour of all the small benefices not exceeding 300 merks. Bishops, by the act which restored them to the whole of their benefices, were obliged to maintain the ministers within their dioceses, out of the thirds; and in like manner, the laic titulars, who got grants of the teinds, became bound, by their acceptance thereof, to provide the kirks within their erections in competent stipends.

11. But all those expedients for the maintenance of the clergy having proved ineffectual, a commission of parliament was appointed in the reign of James VI. for planting kirks, and modifying stipends to ministers out of the teinds; and afterwards several other commissions were appointed, with the more ample powers of dividing large parishes, erecting new ones, &c. all of which were, in 1707, transferred to the court of session, with this limitation, that no parish should be disjoined, nor new church erected, nor old one removed to a new place, without the consent of three-fourths of the heritors, computing the votes, not by their numbers, but by the valuation of their rents within the parish. The judges of session, when sitting in that court, are considered as a commission of parliament, and have their proper clerks, macers, and other officers of court, as such.

12. The lowest stipend that could be modified to a minister by the first commission, was 500 merks, or five chalders of victual, unless where the whole teinds of the parish did not extend so far: and the highest was 1000 merks, or ten chalders. The parliament 1633 raised the *minimum* to eight chalders of victual, and proportionably in silver; but as neither the commission appointed by that act, nor any of the subsequent ones, was limited as to the *maximum*, the commissioners have been in use to augment stipends considerably above the old *maximum*, where there is sufficiency of free teinds, and the cure is burdensome, or living expensive.

13. Where a certain quantity of stipend is modified to a minister out of the teinds of a parish, without proportioning that stipend among the several heritors, the decree is called a *decree of modification*; but where the commissioners also fix the particular proportions payable by each heritor, it is a decree of *modification and locality*. Where a stipend is only modified, it is secured on the whole teinds of the parish, so that the minister can insist against any one heritor to the full extent of his teinds; such heritor being always entitled to relief against the rest for what he shall have paid above his just share: but where the stipend is also localised, each heritor is liable in no more than his own proportion.

14. Few of the reformed ministers were, at first, provided with dwelling houses; most of the Popish clergy having, upon the first appearance of the Reformation, let their manes in feu, or in long tack: ministers therefore got a right, in 1563, to as much of these manes as would serve them, notwithstanding such feus or tacks. Where there was no parson's nor vicar's manse, one was to be built by the heritors, at the sight of the bishop, (now the presbytery), the charge not exceeding 1000l. Scots, nor below 500 merks. Under a manse are comprehended stable, barn, and byre, with a garden; for all which it is usual to allow half an acre of ground.

15. Every

15. Every incumbent is entitled at his entry to have his manse put in good condition; for which purpose, the presbytery may appoint a visitation by tradesmen, and order estimates to be laid before them of the sums necessary for the repairing, which they may proportion among the heritors according to their valuations. The presbytery, after the manse is made sufficient, ought, upon application of the heritors, to declare it a free manse; which lays the incumbent under an obligation to uphold it in good condition during his incumbency, otherwise he or his executors shall be liable in damages; but they are not bound to make up the loss arising from the necessary decay of the building by the waste of time.

16. All ministers, where there is any landward or country parish, are, over and above their stipend, entitled to a glebe, which comprehends four acres of arable land, or sixteen fowms of pasture ground where there is no arable land (a fowm is what will graze ten sheep or one cow); and it is to be designed or marked by the bishop or presbytery out of such kirklands within the parish as lie nearest to the kirk, and, in default of kirklands, out of temporal lands.

17. A right of relief is competent to the heritors, whose lands are set off for the manse or glebe, against the other heritors of the parish. Manses and glebes being once regularly designed, cannot be feued or sold by the incumbent in prejudice of his successors, which is in practice extended even to the case where such alienation evidently appears profitable to the benefice.

18. Ministers, beside their glebe, are entitled to grafs for a horse and two cows. And if the lands, out of which the grafs may be designed, either lie at a distance, or are not fit for pasture, the heritors are to pay to the minister 20l. Scots yearly as an equivalent. Ministers have also freedom of foggage, pasture, fuel, seal, divot, loaning, and free fish and entry, according to use and wont: but what these privileges are, must be determined by the local custom of the several parishes.

19. The legal terms at which stipends become due to ministers are Whitsunday and Michaelmas. If the incumbent be admitted to his church before Whitsunday (till which term the corns are not presumed to be fully sown), he has right to that whole year's stipend; and, if he is received after Whitsunday, and before Michaelmas, he is entitled to the half of that year; because, though the corns were sown before his entry, he was admitted before the term at which they are presumed to be reaped. By the same reason, if he dies or is transported before Whitsunday, he has right to no part of that year; if before Michaelmas, to the half; and if not till after Michaelmas, to the whole.

20. After the minister's death, he executors have right to the annat; which, in the sense of the canon law, was a right reserved to the pope of the first year's fruits of every benefice. Upon a threatened invasion from England anno 1547, the annat was given by our parliament, notwithstanding this right in the pope, to the executors of such churchmen as should fall in battle in defence of their country: but the word *annat* or *ann*, as it is now understood, is the right which law gives to the executors of ministers, of half

a year's benefice over and above what was due to the minister himself for his incumbency.

21. The executors of a minister need make up no title to the ann by confirmation: neither is the right assignable by the minister, or affectable with his debts; for it never belonged to him, but is a mere gratuity given by law to those whom it is presumed the deceased could not sufficiently provide; and law has given it expressly to *executors*: and if it were to be governed by the rules of succession in executory, the widow, in case of no children, would get one half, the other would go to the next of kin; and where there are children, she would be entitled to a third, and the other two thirds would fall equally among the children. But the court of session, probably led by the general practice, have in this last case divided the ann into two equal parts; of which one goes to the widow, and the other among the children *in capita*.

22. From the great confidence that was, in the first ages of Christianity, reposed in churchmen, dying persons frequently committed to them the care of their estates, and of their orphan children; but these were simply rights of trust, not of jurisdiction. The clergy soon had the address to establish to themselves a proper jurisdiction, not confined to points of ecclesiastical right, but extending to questions that had no concern with the church. They judged not only in teinds, patronages, testaments, breach of vow, scandal, &c. but in questions of marriage and divorce, because marriage was a sacrament; in tochers, because these were given in consideration of marriage; in all questions where an oath intervened, on pretence that oaths were a part of religious worship, &c. As churchmen came, by the means of this extensive jurisdiction, to be diverted from their proper functions, they committed the exercise of it to their officials or commissaries: hence the commissary court was called the *bishop's court*, and *curia Christianitatis*; it was also styled the *consistorial court*; from *consistory*, a name first given to the court of appeals of the Roman emperors, and afterwards to the courts of judicature held by churchmen.

23. At the Reformation, all episcopal jurisdiction, exercised under the authority of the bishop of Rome, was abolished. As the course of justice in consistorial causes was thereby stopped, Q. Mary, besides naming a commissary for every diocese, did, by a special grant, establish a new commissary court at Edinburgh, consisting of four judges or commissaries. This court is vested with a double jurisdiction; one diocesan, which is exercised in the special territory contained in the grant, viz. the counties of Edinburgh, Haddington, Linlithgow, Peebles, and a great part of Stirlingshire; and another universal, by which the judges confirm the testaments of all who die in foreign parts, and may reduce the decrees of all inferior commissaries, provided the reduction be pursued within a year after the decree.

Bishops, upon their re-establishment in the reign of James VI. were restored to the right of naming their several commissaries.

24. As the clergy, in time of Popery, assumed a jurisdiction independent of the civil power or any secular court, their sentences could be reviewed only by the pope, or judges delegated by him; so that, with

Law of Scotland.

regard to the courts of Scotland, their jurisdiction was supreme. But, by an act 1560, the appeals from the bishops courts, that were then depending before the Roman consistories, were ordained to be decided by the court of session: and by a posterior act, 1609, the session is declared the king's great consistory, with power to review all sentences pronounced by the commissaries. Nevertheless, since that court had no inherent jurisdiction in consistorial causes prior to this statute, and since the statute gives them a power of judging only by way of advocacy, they have not, to this day, any proper consistorial jurisdiction in the first instance; neither do they pronounce sentence in any consistorial cause brought from the commissaries but remit it back to them with instructions. By the practice immediately subsequent to the act before quoted, they did not admit advocations from the inferior commissaries, till the cause was first brought before the commissaries of Edinburgh; but that practice is now in disuse.

25. The commissaries retain to this day an exclusive power of judging in declarators of marriage, and of the nullity of marriage; in actions of divorce and of non-adherence, of adultery, bastardy, and confirmation of testaments; because all these matters are still considered to be properly consistorial. Inferior commissaries are not competent to questions of divorce, under which are comprehended questions of bastardy and adherence, when they have a connexion with the lawfulness of marriage, or with adultery.

26. Commissaries have now no power to pronounce decrees in absence for any sum above 40l. Scots, except in causes properly consistorial: but they may authenticate tutorial and curatorial inventories; and all bonds, contracts, &c. which contain a clause for registration in the books of any judge competent, and protests on bills, may be registered in their books.

SECT. VI. Of Marriage.

clx. Marriage.

1. Persons, when considered in a private capacity, are chiefly distinguished by their mutual relations; as husband and wife, tutor and minor, father and child, master and servant. The relation of husband and wife is constituted by marriage; which is the conjunction of man and wife, vowing to live inseparably till death.

2. Marriage is truly a contract, and so requires the consent of parties. Idiots, therefore, and furious persons, cannot marry. As no person is presumed capable of consent within the years of pupillarity, which, by our law, lasts till the age of 14 in males, and 12 in females, marriage cannot be contracted by pupils; but if the married pair shall cohabit after puberty, such acquiescence gives force to the marriage. Marriage is fully perfected by consent; which, without consummation, founds all the conjugal rights and duties. The consent requisite to marriage must be *de presenti*. A promise of marriage (*stipulatio sponsalitia*) may be refiled from, as long as matters are entire; but if any thing be done by one of the parties, whereby a prejudice arises from the non-performance, the party refusing is liable in damages to the other. The canonists, and after them our courts of justice, explain a

copula subsequent to a promise of marriage into actual marriage. Law of Scotland
Form of celebrat

3. It is not necessary that marriage should be celebrated by a clergyman. The consent of parties may be declared before any magistrate, or simply before witnesses: and though no formal consent should appear, marriage is presumed from the cohabitation, or living together at bed and board, of a man and woman who are generally reputed husband and wife. One's acknowledgment of his marriage to the midwife whom he called to his wife, and to the minister who baptized his child, was found sufficient presumptive evidence of marriage, without the aid either of cohabitation or of *habit* and *repute*. The father's consent was, by the Roman law, essential to the marriage of children *in familia*: but, by our law, children may enter into marriage, without the knowledge, and even against the remonstrances, of a father.

4. Marriage is forbidden within certain degrees of blood. By the law of Moses (Leviticus xviii.), which by the act 1567. c. 15. has been adopted by us, seconds in blood, and all remoter degrees, may all lawfully marry. By seconds in blood are meant first cousins. Marriage in the direct line is forbidden *in infinitum*; as it is also in the collateral line, in the special case where one of the parties is *loco parentis* to the other, as grand uncle, great grand uncle, &c. with respect to his grand niece, &c. The same degrees that are prohibited in consanguinity, are prohibited in affinity; which is the tie arising from marriage between one of the married pair and the blood relations of the other. Marriage also, where either of the parties is naturally unfit for generation, or stands already married to a third person, is *ipso jure* null. Forbidd degrees.
Other grounds of nullity.

5. To prevent bigamy and incestuous marriages, the church has introduced proclamations of banns; which is the ceremony of publishing the names and designations of those who intend to intermarry in the churches where the bride and bridegroom reside, after the congregation is assembled for divine service; that all persons who know any objection to the marriage may offer it. When the order of the church is observed, the marriage is called *regular*; when otherwise, *clandestine*. Marriage is valid when entered into in either of these ways; but when clandestine, there are certain penalties imposed upon the parties as well as the celebrator and witnesses. Proclamations of banns.

6. By marriage, a society is created between the married pair, which draws after it a mutual communication of their civil interests, in as far as is necessary for maintaining it. As the society lasts only for the joint lives of the *socii*; therefore rights that have the nature of a perpetuity, which our law styles *heritable*, are not brought under the partnership or communion of goods; as a land estate, or bonds bearing a yearly interest: it is only moveable subjects, or the fruits produced by heritable subjects during the marriage, that become common to man and wife. Communion of goods.

7. The husband, as the head of the wife, has the sole right of managing the goods in communion, which is called *jus mariti*. This right is so absolute, that it bears but little resemblance to a right of administering a common subject. For the husband can, in virtue thereof, sell, or even gift, at his pleasure, the whole goods Jus mariti

goods falling under communion; and his creditors may affect them for the payment of his proper debts: so that the *jus mariti* carries all the characters of an assignation, by the wife to her husband, of her moveable estate. It arises *ipso jure* from the marriage; and therefore needs no other constitution. But a stranger may convey an estate to a wife, so as it shall not be subject to the husband's administration; or the husband himself may, in the marriage contract, renounce his *jus mariti* in all or any part of his wife's moveable estate.

8. From this right are excepted paraphernal goods, which, as the word is understood in our law, comprehends the wife's wearing apparel, and the ornaments proper to her person; as necklaces, ear-rings, breast or arm jewels, buckles, &c. These are neither alienable by the husband, nor affectable by his creditors. Things of promiscuous use to husband and wife, as plate, medals, &c. may become paraphernalia, by the husband's giving them to the wife, at or before marriage; but they are paraphernal only in regard to that husband who gave them as such, and are esteemed common moveables, if the wife, whose *paraphernalia* they were, be afterwards married to a second husband; unless he shall in the same manner appropriate them to her.

9. The right of the husband to the wife's moveable estate, is burdened with the moveable debts contracted by her before marriage; and as his right is universal, so also is his burden; for it reaches to her whole moveable debts, though they should far exceed her moveable estate. Yet the husband is not considered as the true debtor in his wife's debts. In all actions for payment, she is the proper defender: the husband is only cited for his interest: that is, as curator to her, and administrator of the society goods. As soon therefore as the marriage is dissolved, and the society goods thereby suffer a division, the husband is no farther concerned in the share belonging to his deceased wife: and consequently is no longer liable to pay her debts, which must be recovered from her representatives or her separate estate.

10. This obligation upon the husband is, however, perpetuated against him, (1.) Where his proper estate, real or personal, has been affected, during the marriage, by complete legal diligence; in which case, the husband must, by the common rules of law, relieve his property from the burden with which it stands charged; but the utmost diligence against his person is not sufficient to perpetuate the obligation; nor even incomplete diligence against his estate. (2.) The husband continues liable, even after the wife's death, in so far as he is *lucratus* or profited by her estate: Still, however, the law does not consider a husband who has got but a moderate tocher with the wife as *lucratus* by the marriage; it is the excess only which it considers as *lucrum*, and that must be estimated by the quality of the parties and their condition of life:—As he was as no time the proper debtor in his wife's moveable debts; therefore, though he should be *lucratus*, he is, after the dissolution, only liable for them *subsidiarie*, i. e. if her own separate estate is not sufficient to pay them off.

11. Where the wife is debtor in that sort of debt, which, if it had been due to her, would have excluded

the *jus mariti*, e. g. in bonds bearing interest, which, as we shall afterwards see (clxiii. 4.), continues heritable as to the rights of husband and wife, notwithstanding of the enactment of the statute 1661, which renders them moveable in certain other respects, the husband is liable only for the bygone interests, and those that may grow upon the debt during the marriage; because his obligation for her debts must be commensurated to the interest he has in her estate. It is the husband alone who is liable in personal diligence for his wife's debts, while the marriage subsists: the wife, who is the proper debtor, is free from all personal execution upon them while she is *vestita viro*.

12. The husband by marriage becomes the perpetual curator of the wife. From this right it arises, 1. That no suit can proceed against the wife till the husband be cited for his interest. 2. All deeds, done by a wife without the husband's consent, are null; neither can she sue in any action without the husband's concurrence. Yet, where the husband refuses, or by reason of forfeiture, &c. cannot concur; or where the action is to be brought against the husband himself, for performing his part of the marriage articles; the judge will authorize her to sue in her own name. The effects arising from this curatorial power discover themselves even before marriage, upon the publication of banns; after which the bride, being no longer *sui juris*, can contract no debt, nor do any deed, either to the prejudice of her future husband, nor even to her own. But in order to this, it is necessary that the banns shall have been published in the bride's parish church as well as in that of her husband.

13. If the husband should either withdraw from his wife, or turn her out of doors; or if, continuing in family with her, he should by severe treatment endanger her life; the commissaries will authorize a separation *à mensa et thoro*, and give a separate alimony to the wife, suitable to her husband's estate, from the time of such separation until either a reconciliation or a sentence of divorce.

14. Certain obligations of the wife are valid, notwithstanding her being *sub cura mariti*; ex. gr. obligations arising from delict; for wives have no privilege to commit crimes. But if the punishment resolves into a pecuniary mulct, the execution of it must, from her incapacity to fulfil, be suspended till the dissolution of the marriage, unless the wife has a separate estate exempted from the *jus mariti*.

15. Obligations arising from contract, affect either the person or the estate. The law has been so careful to protect wives while *sub cura mariti*, that all personal obligations granted by a wife, though with the husband's consent, as bonds, bills, &c. are null; with the following exceptions: (1.) Where the wife gets a separate *peculium* or stock, either from her father or a stranger, for her own or her children's alimony, she may grant personal obligations in relation to such stock: and by stronger reason, personal obligations granted by a wife are good, when her person is actually withdrawn from the husband's power by a judicial separation. (2.) A wife's personal obligation, granted in the form of a deed, *inter vivos*, is valid, if it is not to take effect till her death. (3.) Where the wife is by the husband *preposita negotiis*, intrusted with the management either of a particular branch of business or

Law of Scotland.

The husband is the wife's curator.

Separate alimony.

What obligations of the wife are valid.

Law of
Scotland.

of his whole affairs, all the contracts she enters into in the exercise of her *præpositura* are effectual, even though they be not reduced to writing, but should arise merely *ex re*, from furnishings made to her: but such obligations have no force against the wife; it is the husband only, by whose commission the acts, who is thereby obliged.

16. A wife, while she remains in family with her husband, is considered as *præposita negotiis domesticis*, and consequently may provide things proper for the family; for the price whereof the husband is liable, though they should be misapplied, or though the husband should have given her money to provide them elsewhere. A husband who suspects that his wife may hurt his fortune by high living, may use the remedy of inhibition against her; by which all persons are interpellated from contracting with her, or giving her credit. After the completing of this diligence, whereby the *præpositura* falls, the wife cannot bind the husband, unless for such reasonable furnishings as he cannot instruct that he provided her with *alimonia*. As every man, and consequently every husband, has a right to remove his managers at pleasure, inhibition may pass at the suit of the husband against the wife, though he should not offer to justify that measure by an actual proof of the extravagance or profusion of her temper.

Inhibition
against a
wife.

Rights af-
fecting her
estate.

17. As to rights granted by the wife affecting her estate, she has no moveable estate, except her *paraphernalia*; and these she may alien or impignorate, with consent of her husband. She can, without the husband, bequeath by testament her share of the goods in communion; but she cannot dispose of them *inter vivos*; for she herself has no proper right to them while the marriage subsists. A wife can lawfully oblige herself, in relation to her heritable estate, with consent of her husband: for though her person is in some sense sunk by the marriage, she continues capable of holding a real estate; and in such obligations her estate is considered, and not her person. A husband, though he be curator to his wife, can, by his acceptance or intervention, authorize rights granted by her in his own favour: for a husband's curatory differs in this respect from the curatory of minors, for it is not merely intended for the wife's advantage, but is considered as a mutual benefit to both.

Donations
revocable
and irrevocable.

18. All donations, whether by the wife to the husband or by the husband to the wife, are revocable by the donor; but if the donor dies without revocation, the right becomes absolute. Where the donation is not pure, it is not subject to revocation: thus, a grant made by the husband, in consequence of the natural obligation that lies upon him to provide for his wife, is not revocable, unless in so far as it exceeds the measure of a rational settlement; neither are remuneratory grants revocable, where mutual grants are made in consideration of each other, except where an onerous cause is simulated, or where what is given *hinc inde* bears no proportion to each other. All voluntary contracts of separation, by which the wife is provided in a yearly alimony, are effectual as to the time past, but revocable either by the husband or wife.

Ratification
by wives.

19. As wives are in the strongest degree subject to the influence of their husbands, third parties, in whose favours they had made grants, were frequently vexed with actions of reduction, as if the grant had been ex-

torted from the wife through the force or fear of the husband. To secure the grantees against this danger, ratifications were introduced, whereby the wife, appearing before a judge, declares upon oath, her husband not present, that she was not induced to grant the deed *ex vi aut metu*. A wife's ratification is not absolutely necessary for securing the grantee: law indeed allows the wife to bring reduction of any deed she has not ratified, upon the head of force or fear; of which, if she bring sufficient evidence, the deed will be set aside; but if she fails in the proof, it will remain effectual to the receiver.

Law
Scotland

20. Marriage, like other contracts, might, by the Roman law, be dissolved by the contrary consent of parties; but by the law of Scotland, it cannot be dissolved till death, except by divorce, proceeding either upon the head of adultery or of wilful desertion.

Dissolu-
tion of marri-
age.

21. Marriage is dissolved by death, either *within* year and day from its being contracted, or *after* year and day. If it is dissolved within year and day, all rights granted in consideration of the marriage (unless guarded against in the contract) become void, and things return to the same condition in which they stood before the marriage; with this restriction, that the husband is considered as a *bona fide* possessor, in relation to what he has consumed upon the faith of his right; but he is liable to repay the tocher, without any deduction, in consideration of his family expence during the marriage. If things cannot be restored on both sides, equity hinders the restoring of one party and not the other. In a case which was lately before the court of session, it was determined after a long hearing in presence, that where a marriage had been dissolved within the year without a living child, by the death of the husband, the widow was entitled to be alimented out of an estate of which he died possessed, though there were no conventional provisions stipulated in favour of the wife.

22. Upon the dissolution of a marriage, after year and day, the surviving husband becomes the irrevocable proprietor of the tocher; and the wife, where she survives, is entitled to her jointure, or to her legal provisions. She has also right to mournings, suitable to the husband's quality; and to alimony from the day of his death till the term at which her life rent provision, either legal or conventional, commences. If a living child be procreated of the marriage, the marriage has the same effect as if it had subsisted beyond the year. A day is adjoined to the year, *in majorem evidentiam*, that it may clearly appear that the year itself is elapsed; and therefore, the running of any part of the day, after the year, has the same effect as if the whole were elapsed. The legal right of courtesy competent to the surviving husband is explained below, N^o clxx 28.

23. Divorce is such a separation of married persons, during their lives, as looses them from the nuptial tie, and leaves them at freedom to intermarry with others. But neither adultery, nor wilful desertion, are grounds which must necessarily dissolve marriage; they are only handles, which the injured party may take hold of to be free. Cohabitation, therefore, by the injured party, after being in the knowledge of the acts of adultery, implies a passing from the injury; and no divorce can proceed, which is carried on by collusion be-
twixt

Divorce

law of Scotland.

Law of Scotland.

twist the parties, lest, contrary to the first institution of marriage, they might disengage themselves by their own consent; and though, after divorce, the guilty person, as well as the innocent, may contract second marriages; yet, in the case of divorce upon adultery, marriage is by special statute (1600. c. 20.) prohibited betwixt the two adulterers.

24. Where either party has deserted from the other for four years together, that other may sue for adherence. If this has no effect, the church is to proceed, first by admonition, then by excommunication; all which previous steps are declared to be a sufficient ground for pursuing a divorce. *De praxi*, the commissaries pronounce sentence in the adherence, after one year's desertion; but four years must intervene between the first desertion and the decree of divorce.

25. The legal effects of divorce on the head of desertion are, that the offending husband shall restore the tocher, and forfeit to the wife all her provisions, legal and conventional; and, on the other hand, the offending wife shall forfeit to the husband her tocher, and all the rights that would have belonged to her in the case of her surivance. This was also esteemed the rule in divorces upon adultery. But by a decision of the court of session 1662, founded on a tract of ancient decisions recovered from the records, the offending husband was allowed to retain the tocher.

SECT. VII. *Of Minors, and their Tutors and Curators.*

cxli. pupillarity.

1. The stages of life principally distinguished in law are, *pupillarity, puberty or minority, and majority*. A child is under pupillarity, from the birth to 14 years of age if a male, and till 12 if a female. Minority begins where pupillarity ends, and continues till majority; which, by the law of Scotland, is the age of 21 years complete, both in males and females: but minority, in a large sense, includes all under age, whether pupils or *puberes*. Because pupils cannot in any degree act for themselves, and minors seldom with discretion, pupils are put by law under the power of tutors, and minors may put themselves under the direction of curators. Tutory is a power and faculty to govern the person, and administer the estate, of a pupil. Tutors are either *nominate, of law, or dative*.

2. A tutor nominate is he who is named by a father, in his testament or other writing, to a lawful child. Such tutor is not obliged to give caution for the faithful discharge of his office; because his fidelity is presumed to have been sufficiently known to the father.

3. If there be no nomination by the father, or if the tutors nominate do not accept, or if the nomination falls by death or otherwise, there is a place for a *tutor of law*. This sort of tutory devolves upon the next agnate; by which we understand he who is nearest related by the father, though females intervene.

4. Where there are two or more agnates equally near to the pupil, he who is entitled to the pupil's legal succession falls to be preferred to the others. But as the law suspects that he may not be over careful to preserve a life which stands in the way of his own interest, this sort of tutor is excluded from the custody of the pupil's person; which is commonly committed to the

mother, while a widow, until the pupil be seven years old; and, in default of the mother, to the next cognate, i. e. the highest relation by the mother. The tutor of law must (by act 1474) be at least 25 years of age. He is served or declared by a jury of sworn men, who are called upon a brief issuing from the chancery, which is directed to any judge having jurisdiction. He must give security before he enters upon the management.

5. If no tutor of law demands the office, any person, even a stranger, may apply for a tutory *dative*. But because a tutor in law ought to be allowed a competent time to deliberate whether he will serve or not, no tutory dative can be given till the elapsing of a year from the time at which the tutor of law had first a right to serve. It is the king alone, as the father of his country, who gives tutors dative, by his court of exchequer; and by act 1672, no gift of tutory can pass in exchequer, without the citation or consent of the next of kin to the pupil, both by the father and mother, nor till the tutor give security, recorded in the books of exchequer. There is no room for a tutor of law, or tutory dative, while a tutor nominate can be hoped for: and tutors of law or dative, even after they have begun to act, may be excluded by the tutor nominate, as soon as he offers to accept, unless he has expressly renounced the office. If a pupil be without tutors of any kind, the court of session will, at the suit Judicial of any kinsman, name a factor (steward) for the management of the pupil's estate.

6. After the years of pupillarity are over, the minor is considered as capable of acting by himself, if he has confidence enough of his own capacity and prudence. The only two cases in which curators are imposed upon minors are, (1.) Where they are named by the father, in a state of health. (2.) Where the father is himself alive; for a father is *ipso jure*, without any service, administrator, that is, both tutor and curator of law to his children, in relation to whatever estate may fall to them during their minority. This right in the father does not extend to grandchildren, nor to such even of his immediate children as are foris-familiated. Neither has it place in subjects which are left by a stranger to the minor exclusive of the father's administration. If the minor chooses to be under the direction of curators, he must raise and execute a summons, citing at least two of his next of kin to appear before his own judge ordinary, upon nine days warning (by act 1555.) At the day and place of appearance, he offers to the judge a list of those whom he intends for his curators: such of them as resolve to undertake the office must sign their acceptance, and give caution; upon which an act of curatory is extracted.

7. These curators are styled *ad negotia*; to distinguish them from another sort called curators *ad lites*, who are authorized by the judge to concur with a pupil or minor in actions of law, either where he is without tutors and curators, or where his tutors and curators are parties to the suit. This sort is not obliged to give caution, because they have no intermeddling with the minor's estate: they are appointed for a special purpose; and when that is over, their office is at an end. Women are capable of being tutors and curators under the following restrictions; (1.) The office of a female

Who debarred from tutory and curatory.

Law of
Scotland.

tutor or curator falls by her marriage, even though the nomination should provide otherwise; for she is no longer *sui juris*, and incapable of course of having another under her power. (2.) No woman can be tutor of law. Pupils are (by act 1700) declared incapable of tutory or curatory. Where the minor has more tutors and curators than one, who are called in the nomination to the *joint* management, they must *all* concur in every act of administration; where a certain number is named for a quorum, *that number* must concur: where any one is named *sine quo non*, no act is valid without that one's special concurrence. But if they are named without any of these limitations, the concurrence of *the majority* of the nominees then alive is sufficient.

Difference
between tu-
tory and cu-
ratory.

8. In this, tutory differs from curatory, that as pupils are incapable of consent, they have no person capable of acting; which defect the tutor supplies: but a minor *pubes* can act for himself. Hence, the tutor subscribes alone all deeds of administration: but in curatory, it is the minor who subscribes as the proper party; the curator does no more than consent. Hence also, the persons of pupils are under the power either of their tutors or of their nearest cognates; but the minor, after pupillarity, has the disposal of his own person, and may reside where he pleases. In most other particulars, the nature, the powers, and the duties of the two offices, coincide. Both tutors and curators must, previous to their administration, make a judicial inventory, subscribed by them and the next of kin, before the minor judge ordinary, of his whole estate personal and real; of which, one subscribed duplicate is to be kept by the tutors or curators themselves; another, by the next of kin on the father's side; and a third by the next of kin on the mother's. If any estate belonging to the minor shall afterwards come to their knowledge, they must add it to the inventory within two months after their attaining possession thereof. Should they neglect this, the minor's debtors are not obliged to make payment to them: they may be removed from their offices as suspected; and they are entitled to no allowance for the sums disbursed by them in the minor's affairs (act 1672), except the expence laid out upon the minor's entertainment, upon his lands and houses, and upon completing his titles.

Judicial in-
ventories.Powers of
tutors and
curators.

9. Tutors and curators cannot grant leases of the minor's lands, to endure longer than their own office; nor under the former rental, without either a warrant from the court of session, or some apparent necessity.

10. They have power to sell the minor's moveables; but cannot sell their pupil's land estate, without the authority of a judge: yet this restraint reaches not to such alienations as the pupil could by law be compelled to grant, *e. g.* to renunciations of wadsets upon redemption by the reverser; for in such case, the very tenor of his own right lays him under the obligation; nor to the renewal of charters to heirs; but the charter must contain no new right in favour of the heir. The alienation, however, of heritage by a minor, with consent of his curators, is valid.

11. Tutors and curators cannot, contrary to the nature of their trust, authorize the minor to do any deed for their own benefit; nor can they acquire any debt affecting the minor's estate: and, where a tutor or curator makes such acquisition, in his own name, for a

less sum than the right is entitled to draw, the benefit thereof accrues to the minor. It seems, however, that such purchase would be considered as valid, provided it were *bona fide* acquired at a public sale; for in such case it occurs that the tutor or curator is in fact meliorating the situation of his ward by enhancing the value of his property by a fair competition. In general, it seems to be the genius and spirit of our law, that tutors and curators shall do every thing in their power towards the faithful and proper discharge of their respective offices.

Law
Scott.

12. By the Roman law, tutory and curatory, being *munera publica*, might be forced upon every one who had not a relevant ground of excuse: but, with us, the persons named to these offices may either accept or decline: and where a father, in *liege poullie* (when in a state of health), names certain persons both as tutors and curators to his children, though they have acted as tutors, they may decline the office of curatory. Tutors and curators having once accepted, are liable in *diligence*, that is, are accountable for the consequences of their neglect in any part of their duty from the time of their acceptance. They are accountable *singuli in solidum*, i. e. every one of them is answerable, not only for his own diligence, but for that of his co-tutors; and any one may be sued without citing the rest: but he who is condemned in the whole, has action of relief against his co-tutors.

13. From this obligation to diligence, we may except, (1.) Fathers or administrators-in-law, who, from the presumption that they act to the best of their power for their children, are liable only for actual intromissions. (2.) Tutors and curators named by the father in consequence of the act 1696, with the special proviso, that they shall be liable barely for intromissions, not for omissions; and that each of them shall be liable only for himself, and not *in solidum* for the co-tutors: but this power of exemption from diligence is limited to the estate descending from the father himself. Tutors or curators are not entitled to any salary or allowance for pains, unless a salary has been expressly contained in the testator's nomination; for their office is presumed gratuitous.

14. Though no person is obliged to accept the office of tutor or curator; yet having once accepted, he cannot throw it up or renounce it without sufficient cause; but, if he should be guilty of misapplying the minor's money, or fail in any other part of his duty, he may be removed at the suit of the minor's next in kin, or by a co-tutor or co-curator. Where the misconduct proceeds merely from indolence or inattention, the court, in place of removing the tutor, either join a curator with him, or, if he be a tutor nominate, they oblige him to give caution for his past and future management.

How tu-
ry and c-
ratory ex-
pire.

15. The offices of tutory and curatory expire also by the pupil's attaining the age of puberty, or the minor's attaining the age of 21 years complete; and by the death either of the minor, or of his tutor and curator. Curatory also expires by the marriage of a female minor, who becomes thereby under the coverture of her own husband. After expiry of the office, reciprocal actions lie at the instance both of the tutors and curators, and of the minor. That at the instance of the minor is called *actio tutelæ directæ*, by which he can compel

pel

Law of Scotland.

Law of Scotland.

pel the tutors to account; that at the instance of the tutors, *actio tutelæ contraria*, by which the minor can be compelled to repeat what has been profitably expended during the administration: but this last does not lie till after accounting to the minor; for till then the tutors are presumed *intus habere* to the effects in their own hands for answering their disbursements.

but he cannot avail himself of the *anni utiles*, except in so far as they were unexpired at the ancestor's death. (3.) If a major succeeds to a minor, he has only the *quadriennium utile* after the minor's death, and if he succeeds to a major dying within the *quadriennium*, no more of it can be profitable to him than what remained when the ancestor died.

Deeds by minors.

16. Deeds either by pupils, or by minors having curators without their consent, are null; but they oblige the granters in as far as relates to sums profitably applied to their use. A minor under curators can indeed make a testament by himself; but whatever is executed in the form of a deed *inter vivos*, requires the curator's consent. Deeds by a minor who has no curators, are as effectual as if he had had curators, and signed them with their consent; he may even alien his heritage, without the interposition of a judge.

21. No minor can be compelled to state himself as a defender, in any action, whereby his heritable estate flowing from ascendants may be evicted from him, by one pretending a preferable right. *Minor non tenetur placitare.*

Restitution.

17. Minors may be restored against all deeds granted in their minority, that are hurtful to them. Deeds, in themselves void, need not the remedy of restitution; but where hurtful deeds are granted by a tutor in his pupil's affairs, or by a minor, who has no curators, as these deeds subsist in law, restitution is necessary: and even where a minor, having curators, executes a deed hurtful to himself with their consent, he has not only action against the curators, but he has the benefit of restitution against the deed itself. The minor cannot be restored, if he does not raise and execute a summons for reducing the deed, *ex capite minorennitatis et lesionis*, before he be 25 years old. These four years, between the age of 21 and 25, called *quadriennium utile*, are indulged to the minor, that he may have a reasonable time, from that period, when he is first presumed to have the perfect use of his reason, to consider with himself what deeds done in his minority have been truly prejudicial to him.

22. This privilege is intended merely to save minors from the necessity of disputing upon questions of preference. It does not therefore take place, (1.) Where the action is pursued on the father's falsehood or delict. (2.) Upon his obligation to convey heritage. (3.) On his liquid bond for a sum of money, though such action should have the effect to carry off the minor's estate by adjudication. (4.) Nor in actions pursued by the minor's superior, upon feudal casualties. (5.) This privilege cannot be pleaded in bar of an action which had been first brought against the father, and is only continued against the minor; nor where the father was not in the peaceable possession of the heritable subject at his death. Before the minor can plead it, he must be served heir to his father. The persons of pupils are by said act 1696 protected from imprisonment on civil debts.

Requisites.

18. Questions of restitution are proper to the court of session. Two things must be proved by the minor, in order to the reduction of the deed: (1.) That he was minor when it was signed: (2.) That he is hurt or lesed by the deed. This lesion must not proceed merely from accident; for the privilege of restitution was not intended to exempt minors from the common misfortunes of life; it must be owing to the imprudence or negligence of the minor, or his curator.

23. Curators are given, not only to minors, but in general to every one who, either through defect of judgement, or unfitness of disposition, is incapable of rightly managing his own affairs. Of the first sort, are idiots and furious persons. Idiots, or *fatui*, are entirely deprived of the faculty of reason. The ditenper of the furious person does not consist in the defect of reason; but in an overheated imagination, which obstructs the application of reason to the purposes of life. Curators may be also granted to lunatics; and even to persons dumb and deaf, though they are of sound judgement, where it appears that they cannot exert it in the management of business. Every person, who is come of age, and is capable of acting rationally, has a natural right to conduct his own affairs. The only regular way, therefore, of appointing this sort of curators, is by a jury summoned upon a brief from the chancery; which is not, like the brief of common tutory, directed to any judge ordinary, but to the judge of the special territory where the person alleged to be fatuous or furious resides; that, if he is truly of sound judgement, he may have an opportunity to oppose it: and for this reason, he ought to be made a party to the brief. The curatory of idiots and furious persons belongs to the nearest agnate; but a father is preferred to the curatory of his fatuous son, and the husband to that of his fatuous wife, before the agnate.

How excluded.

19. A minor cannot be restored against his own delict or fraud; e. g. if he should induce one to bargain with him by saying he was major. (1.) Restitution is excluded, if the minor, at any time after majority, has approved of the deed, either by a formal ratification, or tacitly by payment of interest, or by other acts inferring approbation. (2.) A minor, who has taken himself to business, as a merchant-shopkeeper, &c. cannot be restored against any deed granted by him in the course of that business, especially if he was *proximus majorennitati* at signing the deed. (3.) According to the more common opinion, a minor cannot be restored in a question against a minor, unless some gross unfairness shall be qualified in the bargain.

24. A clause is inserted in the brief, for inquiring how long the fatuous or furious person has been in that condition: and the verdict to be pronounced by the inquest has a retrospective effect: for it is declared a sufficient ground, without further evidence, for reducing all deeds granted after the period at which it appeared by the proof that the fatuity or furiosity began. But, as fatuous and furious persons are, by their very state, incapable of being obliged, all deeds done by them may be declared void, upon proper evidence of the

How transmitted to the heir.

20. The privilege of restitution does not always die with the minor himself. (1.) If a minor succeeds to a minor, the time allowed for restitution is governed by the minority of the heir, not of the ancestor. (2.) If a minor succeeds to a major, who was not full 25, the privilege continues with the heir during his minority;

Law of
Scotland.

their faculty at the time of signing, though they should never have been cognosed idiots by an inquest.

25. We have some few instances of the sovereign's giving curators to idiots, where the next agnate did not claim; but such gifts are truly deviations from our law, since they pass without any inquiry into the state of the person upon whom the curatory is imposed.—Hence the curator of law to an idiot serving *quandocunque*, is preferred, as soon as he offers himself, before the curator-dative. This sort of curatory does not determine by the lucid intervals of the person *sub cura*; but it expires by his death, or perfect return to a sound judgement; which last ought regularly to be declared by the sentence of a judge.

Interdic-
tion.

26. Persons, let them be ever so profuse, or liable to be imposed upon, if they have the exercise of reason, can effectually oblige themselves, till they are fettered by law. This may be done by *Interdiction*, which is a legal restraint laid upon such persons from signing any deed to their own prejudice, without the consent of their curators or interdictors.

27. There could be no interdiction by our ancient practice, without a previous inquiry into the person's condition. But as there were few who could bear the shame that attends judicial interdiction, however, necessary the restraint might have been, voluntary interdiction has received the countenance of law; which is generally executed in the form of a bond, whereby the granter obliges himself to do no deed that may affect his estate, without the consent of certain friends therein mentioned. Though the reasons inductive of the bond should be but gently touched in the recital, the interdiction stands good. Voluntary interdiction, though it be imposed by the sole act of the person interdicted, cannot be recalled at his pleasure: but it may be taken off, (1.) By a sentence of the court of session, declaring, either that there was from the beginning no sufficient ground for the restraint; or that the party is, since the date of the bond, become *rei sui providus*. (2.) It falls, even without the authority of the lords, by the joint act of the person interdicted, and his interdictors, concurring to take it off. (3.) Where the bond of interdiction requires a certain number as a quorum, the restraint ceases, if the interdictors shall by death be reduced to a lesser number.

28. Judicial interdiction is imposed by a sentence of the court of session. It commonly proceeds on an action brought by a near kinsman to the party; and sometimes from the *nobile officium* of the court, when they perceive, during the pendency of a suit, that any of the litigants is, from the facility of his temper, subject to imposition. This sort must be taken off by the authority of the same court that imposed it.

Registra-
tion of in-
terdictions.

29. An interdiction need not be served against the person interdicted; but it must be executed, or published by a messenger, at the market cross of the jurisdiction where he resides, by publicly reading the interdiction there, after three oyeses made for convocating the lieges. A copy of this execution must be affixed to the cross; and thereafter, the interdiction, with its execution, must (by the act 1581) be registered in the books both of the jurisdiction where the person interdicted resides and where his lands lie, or (by the act 1600) in the general register of the session, within 40 days from the publication. An interdiction, before

it is registered, has no effect against third parties, though they should be in the private knowledge of it; but it operates against the interdictors themselves, as soon as it is delivered to them.

Law of
Scotland.

30. An interdiction, duly registered, has this effect, Effects that all deeds done thereafter, by the person interdicted, without the consent of his interdictors, affecting his heritable estate, are subject to reduction. Registration in the general register secures all his lands from alienation, wherever they lie; but where the interdiction is recorded in the register of a particular shire, it covers no lands except those situated in that shire. But persons interdicted have full power to dispose of their moveables, not only by testament, but by present deeds of alienation: And creditors, in personal bonds granted after interdiction, may use all execution against their debtor's person and moveable estate: such bonds being only subject to reduction in so far as diligence against the heritable estate may proceed upon them.

31. All onerous or rational deeds granted by the person interdicted, are as effectual, even without the consent of the interdictors, as if the granter had been laid under no restraint; but he cannot alter the succession of his heritable estate, by any settlement, let it be ever so rational. No deed, granted with consent of the interdictors, is reducible, though the strongest lesion or prejudice to the granter should appear: the only remedy competent, in such case, is an action by the granter against his interdictors, for making up to him what he has lost through their undue consent. It is no Office of in- part of the duty of interdictors to receive sums or ma-terdictors. nage any estate; they are given merely *ad auctoritatem praestandam*, to interpose their authority to reasonable deeds: and so are accountable for nothing but their fraud or fault, in consenting to deeds hurtful to the person under their care.

32. The law concerning the state of children falls Lawful children. next to be explained. Children are either born in wedlock, or out of it. All children born in lawful marriage or wedlock, are presumed to be begotten by the person to whom the mother is married; and consequently to be lawful children. This presumption is so strongly founded, that it cannot be defeated but by direct evidence that the mother's husband could not be the father of the child, *e. g.* where he is impotent, or was absent from the wife till within six lunar months of the birth. The canonists indeed maintain, that the concurring testimony of the husband and wife, that the child was not procreated by the husband, is sufficient to elide this legal presumption for legitimacy: but it is an agreed point, that no regard is to be paid to such testimony, if it be made after they have owned the child to be theirs. A father has the absolute right of disposing of his children's person, of directing their education, and of moderate chastisement: and even after they become *puberes*, he may compel them to live in family with him, and to contribute their labour and industry, while they continue there, towards his service. A child who gets a separate stock from the father for carrying on any trade or employment, even though he should continue in the father's house, may be said to be emancipated or forisfamiliated, in so far as it concerns that stock; for the profits arising from it are his own. Forisfamiliation, when taken in this sense, is also infer-

Law of Scotland.

red by the child's marriage, or by his living in a separate house, with his father's permission or good will. Children, after their tutelage of twenty-one years, become, according to the general opinion, their own masters; and from that period are bound to the father only by the natural ties of duty, affection, and gratitude. The mutual obligations between parents and children to maintain each other, are explained afterwards, N^o clxxiii. 4.

Bastards.

33. Children born out of wedlock, are styled natural children, or bastards. Bastards may be legitimated or made lawful. (1.) By the subsequent intermarriage of the mother of the child with the father. And this sort of legitimation entitles the child to all the rights of lawful children. The subsequent marriage, which produces legitimation, is considered by the law to have been entered into when the child legitimated was begotten; and hence, if he be a male, he excludes, by his right of primogeniture, the sons procreated after the marriage, from the succession of the father's heritage, though the sons were lawful children from the birth. Hence, also, those children only can be thus legitimated, who are begotten of a woman whom the father might at that period have lawfully married. (2.) Bastards are legitimated by letters of legitimation from the sovereign. N^o clxxii. 3.

Servants.

34. As to the power of masters over their servants: All servants now enjoy the same rights and privileges with other subjects, unless in so far as they are tied down by their engagements of service. Servants are either necessary or voluntary. Necessary are those whom law obliges to work without wages, of whom immediately. Voluntary servants engage without compulsion, either for mere subsistence, or also for wages. Those who earn their bread in this way, if they should stand off from engaging, may be compelled to it by the justices of the peace, who have power to fix the rate of their wages.

Colliers and salters.

35. Colliers, coal-bearers, salters, and other persons necessary to colliers and salt works, as they are particularly described by act 1661, were formerly tied down to perpetual service at the works to which they had once entered. Upon a sale of the works, the right of their service was transferred to the new proprietor. All persons were prohibited to receive them into their service, without a testimonial from their last master; and if they deserted to another work, and were redemanded within a year thereafter, he who had received them was obliged to return them within twenty-four hours, under a penalty. But though the proprietor should neglect to require the deserter within the year, he did not by that short prescription, lose his property in him. Colliers, &c. where the colliery to which they were restricted was either given up, or not sufficient for their maintenance, might lawfully engage with others; but if that work should be again set a going, the proprietor might reclaim them back to it.

Restrains lately taken off.

36. But by 15 Geo. III. c. 28. these restraints, the only remaining vestiges of slavery in the law of Scotland, are abrogated; and, after the 1st July 1775, all colliers, coal-bearers, and salters, are declared to be upon the same footing with other servants or labourers. The act likewise those who are bound prior to the 1st July 1775, to a certain number of years service for their freedom, according to the age of the person.

Law of Scotland. The poor.

37. The poor make the lowest class or order of persons. Indigent children may be compelled to serve any of the king's subjects without wages, till the age of thirty years. Vagrants and sturdy beggars may be also compelled to serve any manufacturer. And because few persons were willing to receive them into their service, public workhouses are ordained to be built for setting them to work. The poor who cannot work, must be maintained by the parishes in which they were born; and where the place of their nativity is not known, that burden falls upon the parishes where they have had their most common resort, for the three years immediately preceding their being apprehended or their applying for the public charity. Where the contributions collected at the churches to which they belong are not sufficient for their maintenance, they are to receive badges from the minister and kirk session, in virtue of which they may ask alms at the dwelling-houses of the inhabitants of the parish.

CHAP. II. Of THINGS.

THE things, or subjects, to which persons have right, are the second object of law.

SECT. I. Of the Division of Rights, and the several ways by which a Right may be acquired.

clxii.

1. The right of enjoying and disposing of a subject at one's pleasure, is called property. Proprietors are restrained by law from using their property emulously to their neighbour's prejudice. Every state or sovereign has a power over private property, called, by some lawyers, *dominium eminens*, in virtue of which, the proprietor may be compelled to sell his property for an adequate price, where an evident utility on the part of the public demands it.

2. Certain things are by nature itself incapable of appropriation; as the air, the light, the ocean, &c.; none of which can be brought under the power of any one person, though their use be common to all. Others are by law exempted from private commerce, in respect of the uses to which they are destined. Of this last kind are, (1.) *Res publicae*, as navigable rivers, highways, bridges, &c. the right of which is vested in the king, chiefly for the benefit of his people, and they are called *regalia*. (2) *Res universitatis*, things which belong in property to a particular corporation or society, and whose use is common to every individual in it, but both property and use are subject to the regulations of the society; as town houses, corporation halls, market places, churchyards, &c. The lands or other revenue belonging to a corporation do not fall under this class, but are *juris privati*, *quoad* the corporation.

3. Property may be acquired, either by *occupation* or *accession*; and transferred by *tradition* or *prescription*; but prescription being also a way of losing property, falls to be explained under a separate title. OCCUPATION, or occupancy, is the appropriating of things which have no owner, by apprehending them, or seizing their possession. This was the original method of acquiring property: and continued, under certain restrictions, the doctrine of the Roman law, *Quod nullius est, sit occupantis*: but it can have no room in the feudal plan,

Ways of acquiring property.

Law of
Scotland.

plan, by which the king is looked on as the original proprietor of all the lands within his dominions.

4. Even in that sort of moveable goods which are presumed to have once had an owner, this rule obtains by the law of Scotland, *Quod nullius est, fit domini regis*. Thus, the right of treasure hid under ground is not acquired by occupation, but accrues to the king.— Thus also, where one finds strayed cattle or other moveables, which have been lost by their former owner, the finder acquires no right in them, but must give public notice thereof; and if, within year and day after such notice, the proprietor does not claim his goods, they fall to the king, sheriff, or other person to whom the king has made a grant of such escheats.

5. In that sort of moveables which never had an owner, as wild beasts, fowls, fishes, or pearls found on the shore, the original law takes place, that he who first apprehends, becomes proprietor; inasmuch, that though the right of hunting, fowling, and fishing, be restrained by statute, under certain penalties, yet all game, even what is caught in contravention of the law, becomes the property of the catcher (unless where the confiscation thereof is made part of the penalty), the contravener being obnoxious, however, to the penal enactment of the statutes in consequence of his transgression. It was not for a long time a fixed point whether a person, though possessed of the valued rent by law entitling him to kill game, could hunt upon another person's grounds without consent; but it was lately found by the court of session, and affirmed upon appeal, that he could not; it being repugnant to the idea of property, that any person, however qualified, should have it in his power to traverse and hunt upon another's grounds without consent of the proprietor. Although certain things became the property of the first occupant, yet there are others which fall not under this rule. Thus, whales thrown in or killed on our coasts, belong neither to those who kill them, nor to the proprietor of the grounds on which they are cast; but to the king, providing they are so large as that they cannot be drawn by a wane with six oxen.

Accession.

6. ACCESSTON is that way of acquiring property, by which, in two things which have a connexion with, or dependence on, one another, the property of the principal thing draws after it the property of its accessory. Thus the owner of a cow becomes the owner of the calf; a house belongs to the owner of the ground on which it stands, though built with materials belonging to and at the charge of another; trees taking root in our ground, though planted by another become ours. Thus also the insensible addition made to one's ground by what a river washes from other grounds, (which is called *alluvio*), accrues to the master of the ground which receives the addition; but where it happened that a large piece of ground was disjoined and annexed to another person's by the force of a river or any other accident, and which was by the Romans called *avulsio*, they considered the owner's right of property still to subsist, § 21. *Inst. de rer. divis.*; and it is probable that, in a similar case, our courts would countenance the distinction. The Romans excepted from this rule the case of paintings drawn on another man's board or canvas, in consideration of the excellency of the art; which exception our practice has for a like reason extended to similar cases.

2

7. Under accession is comprehended SPECIFICATION; by which is meant, a person's making a new species or subject, from materials belonging to another. Where the new species can be again reduced to the matter of which it was made, law considers the former mass as still existing; and therefore, the new species, as an accessory to the former subject, belongs to the proprietor of that subject: but where the thing made cannot be so reduced, as in the case of wine, which cannot be again turned into grapes, there is no place for the *fectio juris*; and therefore the workmanship draws after it the property of the materials. But the person who thus carries the property from the other is bound to indemnify him according to the true value; and in case it was done *mala fide*, he may be made liable in the *pretium affectionis* or utmost value.

8. Though the new species should be produced from the COMMIXTION or confusion of different substances belonging to different proprietors, the same rule holds; but where the mixture is made by the common consent of the owner, such consent makes the whole a common property, according to the shares that each proprietor had formerly in the several subjects. Where things of the same sort are mixed without the consent of the proprietors, which cannot again be separated; e. g. two hogheads of wine, the whole likewise becomes a common property; but, in the after division, regard ought to be had to the different quality of the wines: if the things so mixed admit of a separation, e. g. two flocks of sheep, the property continues distinct.

9. Property is carried from one to another by TRADITION; which is the delivery of possession by the proprietor, with an intention to transfer the property to the receiver. Two things are therefore requisite, in order to the transmitting of property in this way: 1. The intention or consent of the former owner to transfer it on some proper title of alienation, as sale, exchange, gift, &c. (2.) The actual delivery in pursuance of that intention. The first is called the *causa*, the other the *modus transferendi domini*: which last is so necessary to the acquiring of property, that he who gets the last right, with the first tradition, is preferred, according to the rule, *Traditionibus, non nudis pactis, transferuntur rerum dominia*.

10. Tradition is either real, where the *ipsa corpora* of moveables are put into the hands of the receiver; or symbolical, which is used where the thing is incapable of real delivery, or even when actual delivery is only inconvenient. Where the possession or custody of the subject has been before with him to whom the property is to be transferred, there is no room for tradition.

11. Possession, which is essential both to the acquisition and enjoyment of property, is defined, the detention of a thing, with a design or *animus* in the detainer of holding it as his own. It cannot be acquired by the sole act of the mind, without real detention; but, being once acquired, it may be continued *solo animo*. Possession is either natural, or civil. Natural possession is, when one possesses by himself: thus, we possess lands by cultivating them and reaping their fruits, houses by inhabiting them, moveables by detaining them in our hands. Civil possession is our holding the thing, either by the sole act of the mind, or by the hands of another who

ScotlandSpecifica-
tion.Commix-
tion.

Tradition.

Possession;

natural,

who

Law of Scotland.

Law of Scotland.

who holds it in our name : thus, the owner of a thing lent possesses it by the borrower ; the proprietor of lands, by his tacksman, trustee, or steward, &c. The same subject cannot be possessed entirely, or *in solidum*, by two different persons at one and the same time : and therefore possession by an act of the mind ceases, as soon as the natural possession is so taken up by another, that the former possessor is not suffered to re-enter. Yet two persons may, in the judgement of law, possess the same subject, at the same time, on different rights : thus, in the case of a pledge, the creditor possesses it in his own name, in virtue of the right of impignoration ; while the proprietor is considered as possessing, in and through the creditor, in so far as is necessary for supporting his right of property. The same doctrine holds in liferenters, tacksmen, and, generally, in every case where there are rights affecting a subject distinct from the property.

na fide.

12. A *bona fide* possessor is he who, though he is not really proprietor of the subject, yet believes himself proprietor on probable grounds. A *mala fide* possessor is he who knows, or is presumed to know, that what he possesses is the property of another. A possessor *bona fide* acquired right, by the Roman law, to the fruits of the subject possessed, that had been reaped and consumed by himself, while he believed the subjects his own. By our customs, perception alone, without consumption, secures the possessor : nay, if he has sown the ground, while his *bona fides* continued, he is entitled to reap the crop, *propter curam et culturam*. But this doctrine does not reach to civil fruits, e. g. the interest of money, which the *bona fide* receiver must restore, together with the principal, to the owner.

13. *Bona fides* necessarily ceaseth by the *consentia rei alienæ* in the possessor, whether such conscientiousness should proceed from legal interpellation, or private knowledge. *Mala fides* is sometimes induced by the true owner's bringing his action against the possessor, sometimes not till litifcontestation, and, in cases uncommonly favourable, not till the sentence be pronounced against the possessor.

effects of possession.

14. The property of moveable subjects is presumed by the bare act of possession, until the contrary be proved ; but possession of an immoveable subject, though for a century of years together, if there is no seisin, does not create even a presumptive right to it : *Nulla sefina, nulla terra*. Such subject is considered as caducuary, and so accrues to the sovereign. Where the property of a subject is contested, the lawful possessor is entitled to continue his possession, till the point of right be discussed ; and, if he has lost it by force or stealth, the judge will upon summary application, immediately restore it to him.

15. Where a possessor has several rights in his person, affecting the subject possessed, the general rule is, that he may ascribe his possession to which of them he pleases ; but one cannot prescribe his possession to a title other than that on which it commenced, in prejudice of him from whom his title flowed.

SECT. II. Of Heritable and Moveable Rights.

clxxii.

1. For the better understanding the doctrine of this title, it must be known, that by the law of Scotland, and indeed of most nations of Europe since the introduction of feus, wherever there are two or more in the same degree of consanguinity to one who dies intestate, and who are not all females, such rights belonging to the deceased as are either properly feudal, or have any resemblance to feudal rights, descend wholly to one of them, who is considered as his proper heir ; the others, who have the name of next of kin or executors, must be contented with that portion of the estate which is of a more perishable nature. Hence has arisen the division of rights to be explained under this title : the subjects descending to the heir are styled *heritable* ; and those that fall to the next of kin *moveable*.

2. All rights of, or affecting lands, under which are comprehended houses, mills, fillings, teinds ; and all rights of subjects that are *fundo annexa*, whether completed by seisin or not, are heritable *ex sua natura*. On the other hand, every thing that moves itself or can be moved, and in general whatever is not united to land, is moveable ; as household furniture, corns, cattle, cash, arrears of rent and of interest, even though they should be due on a right of annualrent ; for though the arrears last mentioned are secured on land, yet being presently payable, they are considered as cash.

Division of right into heritable and moveable.

3. Debts, (*nomina debitorum*), when due by bill, promissory note, or account, are moveable. When constituted by bond, they do not all fall under any one head ; but are divided into heritable and moveable, by the following rules. All debts constituted by bond bearing an obligation to invest the creditor in any heritable subject in security of the principal sum and annualrent, or annualrent only, are heritable ; for they not only carry a yearly profit, but are secured upon land.

4. Bonds merely personal, though bearing a clause of interest, are, by act 1661, declared to be moveable as to succession ; i. e. they go, not to the heir, but to the next of kin or executors ; but they are heritable with respect to the fisk, and to the rights of husband and wife ; that is, though by the general rule, moveable rights fall under the communion of goods consequent upon marriage, and the moveables of denounced persons fall to the crown or fisk by single escheat, yet such bonds do neither, but are heritable in both respects.

5. Bonds taken payable to heirs and assignees, including executors, are heritable in all respects, from the destination of the creditor. But a bond, which is made payable to heirs, without mention of executors, descends, not to the proper heir in heritage, though heirs are mentioned in the bond, but to the executor ; for the word *heir*, which is a generic term, points out him who is to succeed by law in the right ; and the executor, being the heir *in mobilibus*, is considered as the person to whom such bond is taken payable. But where a bond is taken to heirs male, or to a series of heirs, one after another, such a bond is heritable, because its destination necessarily excludes executors.

6. Subjects originally moveable become heritable, (1.) By the proprietor's destination. Thus, a jewel, or any other moveable subject, may be provided to the heir, from the right competent to every proprietor to settle his property on whom he pleases. (2.) Moveable rights may become heritable, by the supervening of an heritable security : Thus, a sum due by a personal bond becomes heritable, by the creditor's accept-

How moveable rights become heritable.

ing

Law of Scotland. ing an heritable right for securing it, or by adjudging upon it.

7 Heritable rights do not become moveable by necessary moveable securities; the heritable right being in such case the *jus nobilitas*, which draws the other after it.

Rights partly heritable, partly moveable.

8. Certain subjects partake, in different respects, of the nature both of heritable and moveable. Personal bonds are, by the above cited act 1661, moveable in respect of succession; but heritable as to the silk, and the rights of husband and wife. All bonds, whether merely personal, or even heritable, on which no feisin has followed, may be affected at the suit of creditors, either by adjudication, which is a diligence proper to heritage, or by arrestment, which is peculiar to moveables. Bonds secluding executors, though they descend to the creditor's heir, are payable by the debtor's executors, without relief against the heir; since the debtor's succession cannot be affected by the destination of the creditor.

What period makes a subject heritable or moveable.

9. All questions, whether a right be heritable or moveable, must be determined according to the condition of the subject at the time of the ancestor's death. If it was heritable at that period, it must belong to the heir; if moveable, it must fall to the executor, without regard to any alterations that may have affected the subject in the intermediate period between the ancestor's death and the competition.

I. HERITABLE RIGHTS.

SECT. III. Of the Constitution of Heritable Rights by Charter and Seisin.

cxiv. Origin of the feudal law.

1. Heritable rights are governed by the feudal law, which owed its origin, or at least its first improvements, to the Longobards; whose kings, upon having penetrated into Italy, the better to preserve their conquests, made grants to their principal commanders of great part of the conquered provinces, to be again subdivided by them among the lower officers, under the conditions of fidelity and military service.

2. The feudal constitutions and usages were first reduced into writing about the year 1150, by two lawyers of Milan, under the title of *Consuetudines Feudorum*. None of the German emperors appear to have expressly confirmed this collection by their authority: but it is generally agreed, that it had their tacit approbation, and was considered as the customary feudal law of all the countries subject to the empire. No other country has ever acknowledged these books for their law; but each state has formed to itself such a system of feudal rules, as best agreed with the genius of its own constitution. In feudal questions, therefore, we are governed, in the first place, by our own statutes and customs; where these fail us, we have regard to the practice of neighbouring countries, if the genius of their law appears to be the same with ours; and should the question still remain doubtful, we may have recourse to those written books of the feus, as to the original plan on which all feudal systems have proceeded.

Definition of feus.

3. This military grant got the name, first of *beneficium*, and afterwards of *feudum*; and was defined a

gratuitous right to the property of lands, made under the conditions of fealty and military service, to be performed to the granter by the receiver; the radical right of the lands still remaining in the granter. Under lands, in this definition, are comprehended all rights or subjects so connected with land, that they are deemed a part thereof; as houses, mills, fishings, jurisdictions, patronages, &c. Though feus in their original nature were gratuitous, they soon became the subject of commerce; services of a civil or religious kind were frequently substituted in place of military; and now, of a long time, services of every kind have been entirely dispensed with in certain feudal tenures. He who makes the grant is called the *superior*, and he who receives it the *vassal*. The subject of the *grant* is commonly called the *feu*; though that word is at other times, in our law, used to signify one particular tenure. (See Sect. iv. 2.) The interest retained by the superior in the feu is styled *dominium directum*, or the superiority; and the interest acquired by the vassal, *dominium utile*, or the property. The word *fee* is promiscuously applied to both.

Law Scotland

Superior and vassal

Allodial goods.

4. Allodial goods are opposed to feus; by which are understood goods enjoyed by the owner, independent of a superior. All moveable goods are allodial; lands only are so when they are given without the condition of fealty or homage. By the feudal system, the sovereign, who is the fountain of feudal rights, reserves to himself the superiority of all the lands of which he makes the grant; so that, with us, no lands are allodial, except those of the king's own property, the superiorities which the king reserves in the property-lands of his subjects, and manes and glebes, the right of which is completed by the presbytery's designation, without any feudal grant.

5. Every person who is in the right of an immovable subject, provided he has the free administration of his estate, and is not debarred by statute, or by the nature of his right, may dispose of it to another. Nay, a vassal, though he has only the *dominium utile*, can subfeu his property to a subvassal by a iudicatum right, and thereby raise a new *dominium directum* in himself, subordinate to that which is in his superior; and so *in infinitum*. The vassal who thus subfeu is called the subvassal's immediate superior, and the vassal's superior is the subvassal's mediate superior.

Who can grant feudal right

6. All persons who are not disabled by law, may acquire and enjoy feudal rights. Papists cannot purchase a land estate by any voluntary deed. Aliens, who owe allegiance to a foreign prince, cannot hold a feudal right without naturalization: and therefore, where such privilege was intended to be given to favoured nations or persons, statutes of naturalization were necessary, either general or special; or at least, letters of naturalization by the sovereign.

Who can receive them.

7. Every heritable subject capable of commerce, may be granted in feu. From this general rule are excepted, 1. The annexed property of the crown, which is not alienable without a previous dissolution in parliament. 2. Tailied lands, which are devised under condition that they shall not be aliened. 3. An estate *in hereditate jacente* cannot be effectually aliened by the heir-apparent (i. e. not entered); but such alienation becomes effectual upon his entry, the supervening right

What subjects can be granted in feu.

Law of Scotland.

feudal part.

right accruing in that case to the purchaser; which is a rule applicable to the alienation of all subjects not belonging to the vendor at the time of the sale.

dice, though no warrandice be expressed; but in assignments to debts or decrees, no higher warrandice than from fact and deed is implied.

Effects of warrandice.

8. The feudal right, or, as it is called, *investiture*, is constituted by charter and seisin. By the charter, we understand that writing which contains the grant of the feudal subject to the vassal, whether it be executed in the proper form of a charter, or of a disposition. Charters by subject superiors are granted, either, 1. *A me de superiore meo*, when they are to be holden, not of the grantor himself, but of his superior. This sort is called a *public holding*, because vassals were in ancient times publicly received in the superior's court before the *pares curia* or co-vassals. Or, 2. *De me*, where the lands are to be holden of the grantor. These were called sometimes *base rights*, from *bas, lower*: and sometimes *private*, because, before the establishment of our records, they were easily concealed from third parties; the nature of all which will be more fully explained, Sect. vii. An original charter is that by which the fee is first granted: A charter by progress is a renewed disposition of that fee to the heir or assignee of the vassal. All doubtful clauses in charters by progress ought to be construed agreeably to the original grant; and all clauses in the original charter are understood to be implied in the charters by progress, if there be no express alteration.

12. Gratuitous grants by the crown imply no warrandice; and though warrandice should be expressed, the clause is ineffectual, from a presumption that it has crept in by the negligence of the crown's officers. But where the crown makes a grant, not *jure coronæ*, but for an adequate price, the sovereign is in the same case with his subjects.

13. Absolute warrandice, in case of eviction, affords an action to the grantee against the grantor, for making up to him all that he shall have suffered through the defect of the right; and not simply for his indemnification, by the grantor's repayment of the price to him. But as warrandice is penal, and consequently *stricti juris*, it is not easily presumed, nor is it incurred from every light servitude that may affect the subject; far less does it extend to burdens which may affect the subject posterior to the grant, nor to those imposed by public statute, whether before or after, unless specially warranted against.

Real warrandice.

9. The first clause in an original charter, which follows immediately after the name and designation of the grantor, is the narrative or recital, which expresses the causes inductive of the grant. If the grant be made for a valuable consideration, it is said to be *onerous*; if for love and favour, *gratuitous*. In the dispositive clause of a charter, the subjects made over are described either by special boundaries or march stenes, (which is called a *bounding charter*), or by such other characters as may sufficiently distinguish them. A charter regularly carries right to no subjects but what are contained in this clause, though they should be mentioned in some other clause of the charter. It has been however found, that a right to salmon fishing was carried by a clause *cum piscariis* in the *tenendas* of a charter, the same having been followed with possession.

14. *Real warrandice* is either, 1. *Express*, whereby, in security of the lands principally conveyed, other lands, called *warrandice lands*, are also made over, to which the receiver may have recourse in case the principal lands be evicted. Or, 2. *Tacit*, which is constituted by the exchange or excambion of one piece of ground with another; for, if the lands exchanged are carried off from either of the parties, the law itself, without any paction, gives that party immediate recourse upon his own first lands, given in exchange for the lands evicted.

Excambion.

15. The charter concludes with a *precept of seisin*, which is the command of the superior grantor of the right to his bailie, for giving seisin or possession to the vassal, or his attorney, by delivering to him the proper symbols. Any person, whose name may be inserted in the blank left in the precept for that purpose, can execute the precept as bailie; and whoever has the precept of seisin in his hands, is presumed to have a power of attorney from the vassal for receiving possession in his name.

Precept of seisin.

10. The clause of *tenendas* (from its first words *tenendas prædictas terras*) expresses the particular tenure by which the lands are to be holden. The clause of *reddendo* (from the words *reddendo inde annuatim*) specifies the particular duty or service which the vassal is to pay or perform to the superior.

16. A *seisin* is the instrument or attestation of a notary, that possession was actually given by the superior or his bailie, to the vassal or his attorney; which is considered as so necessary a solemnity, as not to be suppleable, either by a proof of natural possession, or even of the special fact that the vassal was duly entered to the possession by the superior's bailie.

Instrument of seisin.

11. The clause of *warrandice* is that by which the grantor obliges himself that the right conveyed shall be effectual to the receiver. Warrandice is either *personal* or *real*. *Personal warrandice*, where the grantor is only bound personally, is either, 1. *Simple*, that he shall grant no deed in prejudice of the right; and this sort, which is confined to future deeds, is implied even in donations. 2. *Warrandice from fact and deed*, by which the grantor warrants that the right neither has been, nor shall be, hurt by any fact of his. Or, 3. *Absolute warrandice contra omnes mortales*, whereby the right is warranted against all legal defects in it which may carry it off from the receiver either wholly or in part. Where a sale of land proceeds upon an *onerous* cause, the grantor is liable in absolute warran-

17. The symbols by which the delivery of possession is expressed, are, for lands, earth, and stone; for rights of annualrent payable forth of land, it is also earth and stone with the addition of a penny money: for parsonage, teinds, a sheaf of corn; for jurisdictions, the book of the court; for patronages, a psalm book, and the keys of the church; for fishings, net and coble; for mills, clap and happer, &c. The seisin must be taken upon the ground of the lands, except where there is a special dispensation in the charter from the crown.

Symbols used in seisins.

18. All seisins must be registered within 60 days after their date, either in the general register of seisins at Edinburgh, or in the register of the particular shire appointed by the act 1617; which, it must be observ-

Registration of seisins.

is constituted part.

Warrandice.

Law of Scotland.

ed, is not, in every case, the shire within which the lands lie. Burgage feifins are ordained to be registered in the books of the borough.

19. Unregistered feifins are ineffectual against third parties, but they are valid against the granters and their heirs. Feifins regularly recorded, are preferable not according to their own dates, but the dates of their registration.

One feifin serves in contiguous and in united tenements.

20. Seifin necessarily fuppofes a superior by whom it is given; the right therefore which the sovereign, who acknowledges the superior, has over the whole lands of Scotland, is constituted *jure coronæ* without feifin. In several parcels of land that lie contiguous to one another, one feifin serves for all, unless the right of the several parcels be either holden of different superiors, or derived from different authors, or enjoyed by different tenures under the same superior. In difcontiguous lands, a separate feifin must be taken on every parcel, unless the sovereign has united them into one tenantry by a charter of union; in which case, if there is no special place expressed, a feifin taken on any part of the united lands will serve for the whole, even though they be situated in different shires. The only effect of union is, to give the difcontiguous lands the same quality as if they had been contiguous or naturally united; union, therefore, does not take off the necessity of separate feifins, in lands holden by different tenures, or the rights of which flow from different superiors, these being incapable of natural union.

Barony implies union.

21. The privilege of barony carries a higher right than union does, and consequently includes union in it as the lesser degree. This right of barony can neither be given, nor transmitted, unless by the crown; but the quality of simple union, being once conferred on lands by the sovereign, may be communicated by the vassal to a subvassal. Though part of the lands united or erected into a barony be sold by the vassal to be holden *à me*, the whole union is not thereby dissolved; what remains unsold retains the quality.

A charter becomes real only after feifin.

22. A charter, not perfected by feifin, is a right merely personal, which does not transfer the property (see N^o clxxiii. 1.) and a feifin of itself bears no faith without its warrant: It is the charter and feifin joined together that constitutes the feudal right, and secures the receiver against the effect of all posterior feifins, even though the charters on which they proceeded should be prior to his.

All burdens must be inserted in the investiture.

23. No quality which is designed as a lien or real burden on a feudal right, can be effectual against singular successors, if it be not inserted in the investiture. If the creditors in the burden are not particularly mentioned, the burden is not real; for no perpetual unknown encumbrance can be created upon lands. Where the right itself is granted with the burden of the sum therein mentioned, or where it is declared void if the sum be not paid against a day certain, the burden is real; but where the receiver is simply obliged by his acceptance to make payment, the clause is effectual only against him and his heirs.

SECT. IV. *Of the several kinds of Holding.*

clxv.

Ward-holding.

1. Feudal subjects are chiefly distinguished by their different manners of holding, which were either *ward*, *blanch*, *feu*, or *burgage*. *Ward-holding*, (which is now

abolished by 20 Geo. II. c. 50.) was that which was granted for military service. Its proper *reddendo* was *services*, or *services used and wont*; by which last was meant the performance of service whenever the superior's occasions required it. As all feudal rights were originally held by this tenure, ward-holding was *in dubio* presumed. Hence, though the *reddendo* had contained some special service or yearly duty, the holding was presumed ward, if another holding was not particularly expressed.

Law of Scotland.

2. *Feu-holding* is that whereby the vassal is obliged to pay to the superior a yearly rent in money or grain, and sometimes also in services proper to a farm, as ploughing, reaping, carriages for the superior's use, &c. *nomine feudi firmæ*. This kind of tenure was introduced for the encouragement of agriculture, the improvement of which was considerably obstructed by the vassal's obligation to military service. It appears to have been a tenure known in Scotland as far back as *leges burgorum*.

Feu-holding.

3. *Blanch-holding* is that whereby the vassal is to pay to the superior an elufory yearly duty, as a penny money, a roser, a pair of gilt spurs, &c. merely in acknowledgment of the superiority, *nomine albe firmæ*. This duty, where it is a thing of yearly growth, if it be not demanded within the year, cannot be exacted thereafter; and where the words *si petatur tantum* are subjoined to the *reddendo*, they imply a release to the vassal, whatever the quality of the duty may be, if it is not asked within the year.

Blanch-holding.

4. *Burgage-holding* is that, by which boroughs-royal hold of the sovereign the lands which are contained in their charters of erection. This, in the opinion of *Craig*, does not constitute a separate tenure, but is a species of ward-holding; with this speciality, that the vassal is not a private person, but a community: and indeed, watching and warding, which is the usual service contained in the *reddendo* of such charters, might be properly enough said, some centuries ago, to have been of the military kind. As the royal borough is the king's vassal, all burgage-holders hold immediately of the crown: the magistrates, therefore, when they receive the resignations of the particular burgeses, and give feifin to them, act, not as superiors, but as the king's bailies specially authorized thereto.

Burgage-holding.

5. Feudal subjects, granted to churches, monasteries, or other societies for religious or charitable uses, are said to be mortified, or granted *ad manum mortuam*; either because all casualties must necessarily be lost to the superior, where the vassal is a corporation, which never dies; or because the property of these subjects is granted to a dead hand, which cannot transfer it to another. In lands mortified in times of Popery to the church, whether granted to prelates for the behoof of the church, or *in puram elemosynam*; the only services prestable by the vassals were prayers, and singing of masses for the souls of the deceased, which approaches nearer to blanch-holding than ward. The purposes of such grants having been, upon the Reformation, declared superstitious, the lands mortified were annexed to the crown: but mortifications to universities, hospitals, &c. were not affected by that annexation; and lands may, at this day, be mortified to any lawful purpose, either by blanch or by feu holding:

Mortification.

ing: But as the vassal must lose all the casualties of superiority in case of mortifications to churches, universities, &c. which, being considered as a corporation, never dies; therefore lands cannot be mortified without the superior's consent. *Craig*, lib. i. dieg. 11. § 21.

fonable excuses are now admitted to liberate even from the retoured duties before citation.

Law of Scotland. Retoured duties.

6. For understanding the nature of retoured duties, it must be known, that there was anciently a general valuation of all the lands in Scotland, designed both for regulating the proportion of public subsidies, and for ascertaining the quantity of non-entry and relief duties payable to the superior; which appears, by a contract between K. R. Bruce and his subjects *anno* 1327, preserved in the library of the Faculty of Advocates, to have been settled at least as far back as the reign of Alexander III. This valuation became in the course of time, by the improvement of agriculture, and perhaps also by the heightening of the nominal value of our money, from the reign of Robert I. downwards to that of James III. much too low a standard for the superior's casualties; wherefore, in all services of heirs, the inquest came at last to take proof likewise of the present value of the lands contained in the brief (*quantum nunc valent*), in order to fix these casualties. The first was called the *old*, and the other the *new, extent*. Old and new extents were ordained to be specified in all retours made to the chancery upon brieves of inquest; yet by the appellation of retoured duties in a question concerning casualties, the new extent is always understood. The old extent continued the rule for levying public subsidies, till a tax was imposed by new proportions, by several acts made during the usurpation. By two acts of Cromwell's parliament, held at Westminster in 1656, imposing taxations on Scotland, the rates laid upon the several counties are precisely fixed. The subsidy granted by the act of convention 1667 was levied on the several counties, nearly in the same proportions that were fixed by the usurper in 1656; and the sums to which each county was subjected were subdivided among the individual landholders in that county, according to the valuations already settled, or that should be settled by the commissioners appointed to carry that act into execution. The rent fixed by these valuations is commonly called the *valued rent*; according to which the land tax and most of the other public burdens, have been levied since that time.

SECT. V. Of the Casualties due to the Superior.

1. The right of the superior continues unimpaired, notwithstanding the feudal grant, unless in so far as the *dominium utile*, or property, is conveyed to his vassal. The superiority carries a right to the services and annual duties contained in the *reddendo* of the vassal's charter. The duty payable by the vassal is a *debitum fundi*, i. e. it is recoverable, not only by a personal action against himself, but by a real action against the lands.

2. Besides the constant fixed rights of superiority, there are others which, because they depend upon uncertain events, are called *casualties*.

3. The casualties proper to a ward-holding, while that tenure subsisted, were *ward, recognition, and marriage*, which it is now unnecessary to explain, as by the late statutes 23 and 25 Geo. II. for abolishing ward-holdings, the tenure of the lands holden ward of the crown or prince is turned into *blanch*, for payment of one penny Scots yearly, *si petatur tantum*; and the tenure of those holden of subjects into *feu*, for payment of such yearly feu duty in money, victual, or cattle, in place of all services, as should be fixed by the court of session. And accordingly that court, by act of sederunt Feb. 8. 1749, laid down rules for ascertaining the extent of these feu duties. A full history of their casualties, and of the effects consequent upon their falling to the superior, will be found in Erskine's large Institute, B. 2. t. 5. § 5. *et sequen.*; to which the reader is referred.

4. The only casualty, or rather forfeiture, proper to feu-holding, is the loss or tinsel of the feu right, by the neglect of payment of the feu duty for two full years. Yet where there is no conventional irritancy in the feu right, the vassal is allowed to purge the legal irritancy at the bar; that is, he may prevent the forfeiture, by making payment before sentence; but where the legal irritancy is fortified by a conventional, he is not allowed to purge, unless where he can give a good reason for the delay of payment.

5. The casualties common to all holdings are *non-entry, relief, liferent escheat, disclamation, and purpresture*. NON-ENTRY is that casualty which arises to the superior out of the rents of the feudal subject, through the heirs neglecting to renew the investiture after his ancestor's death. The superior is entitled to this casualty, not only where the heir has not obtained himself investiture, but where his retour or investiture is set aside upon nullities. The heir, from the death of the ancestor, till he be cited by the superior in a process of general declarator of non-entry, loses only the retoured duties of his lands, (see next parag.); and he forfeited these, though his delay should not argue any contempt of the superior, because the casualty is considered to fall, as a condition implied in the feudal right, and not as a penalty of transgression: but rea-

7. In feu-holdings, the feu duty is retoured as the rent, because the feu duty is presumed to be, and truly was at first, the rent. The superior therefore of a feu-holding gets no non-entry, before citation in the general declarator; for he would have been entitled to the yearly feu duty, though the fee had been full, i. e. though there had been a vassal investiture in the lands. The superior of teinds gets the fifth part of the retoured duty as non entry, because the law considers teinds to be worth a fifth part of the rent. In rights of annualrent which are holden of the granter, the annualrent becomes his debtor's vassal; and the annualrent contained in the right is retoured to the blanch or other duty contained in the right before declarator.

8. It is because the retoured duty is the presumed rent, that the non-entry is governed by it. If therefore no retour of the lands in non-entry can be produced, nor any evidence brought of the retoured duty, the superior is entitled to the real, or at least to the valued rent, even before citation. In lands formerly holden ward of the king, the heir, in place of the re-

Valued rent.

toured

Law of
Scotland.

toured duties, is subjected only to the annual payment of one per cent. of the valued rent.

9. The heir, after he is cited by the superior in the action of general declarator, is subjected to the full rents till his entry, because his neglect is less excusable after citation. The decree of declarator, proceeding on this action, entitles the superior to the possession, and gives him right to the rents downward from the citation. As this sort of non-entry is properly penal, our law has always restricted it to the retoured duties, if the heir had a probable excuse for not entering.

In what
cases non-
entry is not
due.

10. Non-entry does not obtain in burgage-holdings, because the incorporation of inhabitants holds the whole incorporated subjects of the king; and there can be no non-entry duty in lands granted to communities, because there the vassal never dies. This covers the right of particulars from non-entry: for if non-entry be excluded with regard to the whole, it cannot obtain with regard to any part. It is also excluded, as to a third of the lands, by the terce, during the widow's life; and as to the whole of them, by the courtesy during the life of her husband. But it is not excluded by a precept of feisin granted to the heir till feisin be taken thereupon.

Relief.

11. RELIEF is that casualty which entitles the superior to an acknowledgment or consideration from the heir for receiving him as vassal. It is called *relief*, because, by the entry of the heir, his fee is relieved out of the hands of the superior. It is not due in feu-holdings flowing from subjects, unless where it is expressed in the charter by a special clause for doubling the feu duty at the entry of an heir; but in feu rights holden of the crown, it is due, though there should be no such clause in the charter. The superior can recover this casualty, either by a poiding of the ground, as a *debitum fundi*, or by a personal action against the heir. In blanch and feu-holdings, where this casualty is expressly stipulated, a year's blanch or feu duty is due in name of *relief*, beside the current year's duty payable in name of *blanch* or *feu farm*.

Escheat.

12. ESCHEAT (from *eschair*, to happen or fall) is that forfeiture which falls through a person's being denounced rebel. It is either *single* or *lifèrent*. *Single escheat*, though it does not accrue to the superior, must be explained in this place, because of its coincidence with *lifèrent*.

Letters of
horning.

13. After a debt is constituted, either by a formal decree, or by registration of the ground of debt, which to the special effect of execution, is in law accounted a decree: the creditor may obtain letters of horning, issuing from the signet, commanding messengers to charge the debtor to pay or perform his obligation, within a day certain. Where horning proceeds on a formal decree of the session, the time indulged by law to the debtor is fifteen days; if upon a decree of the commission of teinds or admiral, it is ten; and upon the decrees of all inferior judges, fifteen days. Where it proceeds on a registered obligation, which specifies the number of days, that number must be the rule; and, if no precise number be mentioned, the charge must be given in fifteen days, which is the term of law, unless where special statute interposes; as in bills, upon which the debtor may be charged on six days.

14. The messenger must execute these letters (and

indeed all summonses) against the debtor, either personally or at his dwelling house; and, if he get not access to the house, he must strike six knocks at the gate, and thereafter affix to it a copy of his execution. If payment be not made within the days mentioned in the horning, the messenger, after proclaiming three o'esses at the market cross of the head borough of the debtor's domicile, and reading the letters there, blows three blasts with a horn, by which the debtor is understood to be proclaimed rebel to the king for contempt of his authority; after which, he must affix a copy of the execution to the market cross; This is called the *publication of the diligence*, or a *denunciation* Denuncia-
tion. *at the horn*. Where the debtor is not in Scotland, he must be charged on sixty days, and denounced at the market cross of Edinburgh, and pier and shore of Leith.

Law o
Scotlan.

15. Denunciation, if registered within 15 days, either in the sheriff's books, or in the general register, drew after it the rebel's single escheat, i. e. the forfeiture of his moveables to the crown. Persons denounced rebels have not a *persona standi in judicio*; they can neither sue nor defend in any action. But this incapacity being unfavourable, is personal to the rebel, and cannot be pleaded against his assignee. Consequen-
ces therec

16. Persons cited to the court of justiciary may be also denounced rebels, either for appearing there with too great a number of attendants: or, if they fail to appear, they are declared fugitives from the law. Single escheat falls, without denunciation, upon sentence of death pronounced in any criminal trial; and, by special statute, upon one's being convicted of certain crimes, though not capital; as perjury, bigamy, deforcement, breach of attestation, and usury. By the late act abolishing ward-holdings, the casualties both of single and *lifèrent* escheat are discharged, when proceeding upon denunciation for civil debts; but they still continue, when they arise from criminal causes. All moveables belonging to the rebel at the time of his rebellion, (whether proceeding upon denunciation, or sentence in a criminal trial), and all that shall be afterwards acquired by him until relaxation, fall under single escheat. Bonds bearing interest, because they continue heritable *quoad fscum*, fall not under it, nor such fruits of heritable subjects as became due after the term next ensuing the rebellion, these being reserved for the *lifèrent* escheat. Denuncia-
tion in cri-
minal cas

17. The king never retains the right of escheat to himself, but makes it over to a donatory, whose gift is not perfected till, upon an action of general declarator, it be declared that the rebel's escheat has fallen to the crown by his denunciation, and that the right of it is now transferred to the pursuer by the gift in his favour. Every creditor therefore of the rebel, whose debt was contracted before rebellion, and who has used diligence before declarator, is preferable to the donatory. But the escheat cannot be affected by any debt contracted, nor by any voluntary deed of the rebel after rebellion.

18. The rebel, if he either pays the debt charged for, or suspends the diligence, may procure letters of relaxation from the horn, which, if published in the same place, and registered 15 days thereafter in the same register with the denunciation, have the effect to restore Letters of
relaxation

Law of Scotland.
rent
cheat.

Law of Scotland.

restore him to his former state; but they have no retrospect as to the moveables already fallen under escheat, without a special clause for that purpose.

19. The rebel, if he continues unrelaxed for year and day after rebellion, is construed to be civilly dead: and therefore, where he holds any feudal right, his superiors, as being without a vassal, are entitled, each of them, to the rents of such of the lands belonging to the rebel as hold of himself, during all the days of the rebel's natural life, by the casualty of **LIFERENT ES-CHEAT**; except where the denunciation proceeds upon treason or proper rebellion, in which case the liferent falls to the king.

20. It is that estate only, to which the rebel has a proper right of liferent in his own person, that falls under his liferent escheat.

21. Though neither the superior nor his donatory can enter into possession in consequence of this casualty, till decree of declarator; yet that decree, being truly declaratory, has a retrospect, and does not so properly confer a new right, as declare the right formerly constituted to the superior, by the civil death of his vassal. Hence, all charters or heritable bonds, though granted prior to the rebellion, and all adjudications, though led upon debts contracted before that period, are ineffectual against the liferent escheat, unless seisin be taken thereon within year and day after the granter's rebellion.

22. Here, as in single escheat, no debt contracted after rebellion can hurt the donatory, nor any voluntary right granted after that period, though in security or satisfaction of prior debts.

disclama-
on.
pres-
re.

23. **DISCLAMATION** is that casualty whereby a vassal forfeits his whole feu to his superior, if he disowns or disclaims him, without ground, as to any part of it. **PURFEISTURE** draws likewise a forfeiture of the whole feu after it; and is incurred by the vassal's encroaching upon any part of his superior's property, or attempting, by building, enclosing, or otherwise, to make it his own. In both these feudal delinquencies, the least colour of excuse saves the vassal.

signatures.

24. All grants from the crown, whether charters, gifts of casualties, or others, proceed on signatures which pass the signet. When the king resided in Scotland, all signatures were superscribed by him; but, on the accession of James VI. to the crown of England, a casket or seal was made, having the king's name engraved on it, in pursuance of an act of the privy council, April 4. 1603, with which all signatures were to be afterwards sealed, that the lords of exchequer were empowered to pass; and these powers are transferred to the count of exchequer, which was established in Scotland after the union of the two kingdoms in 1707. Grants of higher consequence, as remission of crimes, gifts proceeding upon forfeiture, and charters of *novodemus*, must have the king's sign manual for their warrant.

als.

25. If lands holding of the crown were to be conveyed, the charter passed, before the union of the kingdoms in 1707, by the great seal of Scotland; and now by a seal substituted in place thereof. Grants of church dignities, during Episcopacy, passed also by the great seal; and the commissions to all the principal officers of the crown, as justice clerk, king's advocate, solicitor, &c. do so at this day. All rights which sub-

jects may transmit by simple assignation, the king transmits by the privy seal: as gifts of moveables, or of casualties that require no seisin. The quarter seal, otherwise called the *testimonial of the great seal*, is appended to gifts of tutory, commissions of briefs issuing from the chancery, and letters of presentation to lands holding of a subject, proceeding upon forfeiture, bastardy, or *ultimus heres*.

Their use.

26. Seals are to royal grants what subscription is to rights derived from subjects, and give them authority; they serve also as a check to gifts procured (*subreptione vel obreptione*) by concealing the truth, or expressing a falsehood; for, where this appears, the gift may be stopped before passing the seals, though the signature should have been signed by the king. All rights passing under the great or privy seal must be registered in the registers of the great or privy seal *respectively*, before appending the seal.

SECT. VI. *Of the Right which the Vassal acquires by getting the Feu.*

1. Under the *dominium utile* which the vassal acquires by the feudal right, is comprehended the property of whatever is considered as part of the lands, whether of houses, woods, enclosures, &c. above ground; or of coal, limestone, minerals, &c. under ground. Mills have, by the generality of our lawyers, been deemed a separate tenement, and so not carried by a charter or disposition, without either a special clause conveying mills, or the erection of the lands into a barony. Yet it is certain, that, if a proprietor builds a mill on his own lands, it will be carried by his entail, or by a retour, without mentioning it, although the lands are not erected into a barony. If the lands disposed be allotted, or thirled to another mill, the purchaser is not allowed to build a new corn mill on his property, even though he should offer security that it shall not hurt the thirle; which is introduced for preventing daily temptations to fraud.

Dominium utile.

2. Proprietors are prohibited to hold dove-cots, unless their yearly rent, lying within two miles thereof, extend to ten chalders of victual. A purchaser of lands, with a dove-cot, is not obliged to pull it down, though he should not be qualified to build one; but, if it becomes ruinous, he cannot rebuild it. The right of brewing, though not expressed in the grant, is implied in the nature of property; as are also the rights of fishing, fowling, and hunting, in so far as they are not restrained by statute.

Regalia.

3. There are certain rights naturally consequent on property, which are deemed to be preserved by the crown as *regalia*; unless they be specially conveyed. Gold and silver mines are of this sort; the first universally; and the other, where three halfpennies of silver can be extracted from the pound of lead, by act 1424, (three halfpennies at that time was equal to about two shillings five pennies of our present Scots money). These were by our ancient law annexed to the crown; but they are now dissolved from it; and every proprietor is entitled to a grant of the mines within his own lands, with the burden of delivering to the crown a tenth of what shall be brought up.

4. Salmon fishing is likewise a right understood to be reserved by the crown, if it be not expressly granted:

Law of
Scotland.

but 40 years possession thereof, where the lands are either erected into a barony, or granted with the general clause of fishings, establishes the full right of the salmon fishing in the vassal. A charter of lands within which any of the king's forests lie, does not carry the property of such forest to the vassal.

Res publica.

5. All the subjects which were by the Roman law accounted *res publicae*, as rivers, highways, ports, &c. are, since the introduction of feus, held to be *interregalia*, or in *patrimonio principis*; and hence encroachment upon a highway is said to infer purpresture. No person has the right of a free port without a special grant, which implies a power in the grantee to levy anchorage and shore dues, and an obligation upon him to uphold the port in good condition. In this class of things, our forefathers reckoned fortalices, or small places of strength, originally built for the defence of the country, either against foreign invasions or civil commotions; but these now pass with the lands in every charter.

Pertinents.

6. The vassal acquires right by his grant, not only to the lands specially contained in the charter, but to those that have been possessed 40 years as pertinent thereof. But, 1. If the lands in the grant are marked out by special limits, the vassal is circumscribed by the tenor of his own right, which excludes every subject without these limits from being pertinent of the lands. 2. A right possessed under an express investment is preferable, *ceteris paribus*, to one possessed only as pertinent. 3. Where neither party is invest *per expressum*, the mutual promiscuous possession by both, of a subject as pertinent, resolves into a commonalty of the subject possessed: but if one of the parties has exercised all the acts of property of which the subject was capable, while the possession of the other was confined to pasturage only, or to casting seal and divot, the first is to be deemed sole proprietor, and the other to have merely a right of servitude.

Privileges
of barony.

7. As barony is a *nomen universitatis*, and unites the several parts contained in it into one individual right, the general conveyance of a barony carries with it all the different tenements of which it consists, though they should not be specially enumerated (and this holds, even without erection into a barony, in lands that have been united under a special name). Hence, likewise, the possession by the vassal of the smallest part of the barony lands preserves to him the right of the whole.

Tack or
lease.

8. The vassal is entitled, in consequence of his property, to levy the rents of his own lands, and to recover them from his tenants by an action for rent before his own court; and from all other possessors and intruders, by an action of mails and duties before the sheriff. He can also remove from his lands, tenants who have no leases; and he can grant tacks or leases to others. A tack is a contract of location, whereby the use of land, or any other immoveable subject, is set to the lessee or tackman for a certain yearly rent, either in money, the fruits of the ground, or services. It ought to be reduced into writing, as it is a right concerning lands: tacks, therefore, that are given verbally, to endure for a term of years, are good against neither party for more than one year. An obligation to grant a tack is as effectual against the grantor as a formal tack. A liferenter, having a temporary pro-

perty in the fruits, may grant tacks to endure for the term of his own liferent.

Law
Scott.

9. The tackman's right is limited to the fruits which spring up annually from the subject set, either naturally, or by his own industry; he is not therefore entitled to any of the growing timber above ground, and far less to the minerals, coal, clay, &c. under ground, the use of which consumes the substance. Tacks are, like other contracts, personal rights in their own nature; and consequently ineffectual against singular successors in the lands; but, for the encouragement of agriculture, they were, by act 1449, declared effectual to the tackman for the full time of their endurance, into whose hands soever the lands might come.

10. To give a written tack the benefit of this statute, it must mention the special tack-duty payable to the proprietor, which, though small, if it be not elusory, secures the tackman; and it must be followed by possession, which supplies the want of a seisin. If a tack does not express the term of entry, the entry will commence at the next term after its date, agreeable to the rule, *Quod pure debetur, presenti die debetur*. If it does not mention the ish, i. e. the term at which it is to determine, it is good for one year only; but, if the intention of parties to continue it for more than one year, should appear from any clause in the tack, e. g. if the tackman should be bound to certain annual prestations), it is sustained for two years as the *minimum*. Tacks granted to perpetuity, or with an indefinite ish, have not the benefit of the statute. Tacks of houses within borough do not fall within this act, it being customary to let these from year to year.

11. Tacks necessarily imply a *delectus persone*, a choice by the fetter of a proper person for his tenant. Hence the conveyance of a tack which is not granted to assignees, is ineffectual without the landlord's consent. A right of tack, though it be heritable, falls under the *jus mariti*, because it cannot be separated from the labouring cattle and implements of tillage, which are moveable subjects. A tack, therefore, granted to a single woman, without the liberty of assigning, falls by her marriage; because the marriage, which is a legal conveyance thereof to the husband, cannot be annulled. This implied exclusion of assignees, is, however, limited to voluntary, and does not extend to necessary, assignments; as an adjudication of a tack by the tackman's creditor: but a tack, expressly excluding assignees, cannot be carried even by adjudication. It was not a fixed point for a long time, whether a tenant could sublet without consent of the landlord; but the court of session, in a case which occurred a few years ago, denied the power of subletting in the tenant. Liferent tacks, because they import a higher degree of right in the tackman than tacks for a definite term, may be assigned, unless assignees be specially excluded.

12. If neither the fetter nor tackman shall properly discover their intention to have the tack dissolved at the term fixed for its expiration, they are understood, or presumed, to have entered into a new tack upon the same terms with the former, which is called *tacit relocation*; and continues till the landlord warns the tenant to remove, or the tenant renounces his tack to the landlord: this obtains also in the case of moveable tenants, who possess from year to year without written tacks.

In

Law of Scotland.

Law of Scotland.

In judicial tacks, however, by the court of session, tacit relocation neither does nor can take place; for cautioners being interposed to these, they are looked at the end of the tack: and therefore, where judicial tacksmen possess after expiry of the right, they are accountable as factors.

13. In tacks of land, the setter is commonly bound to put all the houses and office houses, necessary for the farm, in good condition at the tenant's entry; and the tenant must keep them and leave them so at his removal. But, in tacks of houses, the setter must not only deliver to the tenant the subject fit, in tenantable repair at his entry, but uphold it in that repair during the whole years of the tack, unless it is otherwise covenanted betwixt the parties.

14. If the inclemency of the weather, inundation, or calamity of war, should have brought upon the crop an extraordinary damage (*plus quam tolerabile*), the landlord had, by the Roman law, no claim for any part of the tack-duty; if the damage was more moderate, he might exact the full rent. It is nowhere defined, what degree of sterility or devastation makes a loss *plus quam tolerabile*; but the general rule of the Roman law seems to be made ours. Tenants are not obliged to pay any public burdens to which they are not expressly bound by their tack, except mill services.

Eviction tacks.

15. Tacks may be evacuated during their currency, (1.) In the same manner as feu rights, by the tacksmen's running in arrear of his tack duty for two years together. This irritancy may be prevented by the tenant's making payment at the bar before sentence. (2.) Where the tenant either runs in arrear of one year's rent, or leaves his farm uncultivated at the usual season; in which case he may, by act of sederunt 1756, be ordained to give security for the arrears, and for the rent of the five following crops, if the tack shall subsist so long; otherwise to remove, as if the tack were at an end. (3.) Tacks may be evacuated at any time by the mutual consent of parties.

Warning.

16. The landlord, when he intends to remove a tenant whose tack is expiring, or who possesses without a tack, must, upon a precept signed by himself, warn the tenant forty days preceding the term of Whitsunday, at or immediately preceding the 1st, personally or at his dwelling house, to remove at that term, with his family and effects. This precept must be also executed on the ground of the lands, and thereafter read in the parish church where the lands lie, after the morning service, and affixed to the most patent door thereof. Whitsunday, though it be a moveable feast, is, in questions of removing, fixed to the 15th of May. In warnings from tenements within borough, it is sufficient that the tenant be warned forty days before the 1st of the tack, whether it be Whitsunday or Martinmas; and in these the ceremony of chalking the door is sustained as warning, when proceeding upon a verbal order from the proprietor.

17. This process of warning was precisely necessary for founding an action of removing against tenants, till the act of sederunt 1756, which leaves it in the option of the proprietor, either to use the former method, or to bring his action of removing before the judge ordinary: which, if it be called 40 days before the said term of Whitsunday, shall be held as equal to a warning. Where the tenant is bound, by an express clause of his

tack, to remove at the 1st without warning, such obligation is, by the said act, declared to be a sufficient warrant for letters of horning; upon which, if the landlord charge his tenant forty days before the said Whitsunday, the judge is authorized to eject him within six days after the term of removing expressed in the tack.

Actions of removing.

18. Actions of removing might, even before this act of sederunt, have been pursued without any previous warning, (1.) Against vicious possessors, i. e. persons who had seized the possession by force, or who, without any legal title, had intruded into it, after the last possessor had given it up. (2.) Against possessors who had a naked tolerance. (3.) Against tenants who had run in arrear of rent, during the currency of their tacks. (4.) Against such as had sold their lands, and yet continued to possess after the term of the purchaser's entry. Upon the same ground, warning was not required, in removings against possessors of liferented lands, after the death of the liferenter who died in the natural possession: but if he possessed by tenants, these tenants could not be disturbed in their possessions till the next Whitsunday, that they might have time to look out for other farms; but they might be compelled to remove at that term, by an action of removing, without warning.

19. A landlord's title in a removing, let it be ever so lame, cannot be brought under question by a tenant whose tack flows immediately from him; but, if he is to insist against tenants not his own, his right must be perfected by infestment, unless it be such as requires no infestment; as terce, &c.

Violent profits.

20. The defender, in a removing, must (by act 1555) before offering any defence which is not instantly verified, give security to pay to the setter the *violent profits*, if they should be awarded against him. These are so called, because the law considers the tenant's possession after the warning as violent. They are estimated, in tenements within borough, to double the rent; and in lands, to the highest profits the pursuer could have made of them, by possessing them either by a tenant or by himself.

Effect of warning not insisted in.

21. If the action of removing shall be passed from, or if the landlord shall, after using warning, accept of rent from the tenant, for any term subsequent to that of the removal, he is presumed to have changed his mind, and tacit relocation takes place. All actions of removing against the principal or original tacksmen, and decrees thereupon, if the order be used, which is set forth *supra* (17.), are, by the act of sederunt 1756, declared to be effectual against the assignees to the tack or subtenants.

Hypothec.

22. The landlord has, in security of his tack-duty, over and above the tenant's personal obligation, a tacit pledge or hypothec, not only on the fruits, but on the cattle pasturing on the ground. The corn, and other fruits are hypothecated for the rent of that year whereof they are the crop; for which they remain affected, though the landlord should not use his right for years together. In virtue of this hypothec, the landlord is entitled to a preference over any creditor, though he has actually used a poiding; except in the special case, that the poiding is executed after the term of payment, when the landlord can appropriate the crop for his payment, the poider in such case being obliged

Law of
Scotland.

to leave as much on the ground as to satisfy the landlord's hypothec: and it was found by the court of feilion, that this right of the landlord is preferable even to a debt due to the crown, for which a writ of extent had been issued.

23. The whole cattle on the ground, considered as a quantity, are hypothecated for a year's rent, one after another successively. The landlord may apply this hypothec for payment of the past year's rent, at any time within three months from the last conventional term of payment, after which it ceases for that year. As the tenant may increase the subject of this hypothec, by purchasing oxen, sheep, &c. so he can impair it, by selling part of his flock; but if the landlord suspects the tenant's management, he may, by sequestration or poinding, make his right, which was before general upon the whole flock, special upon every individual. A superior has also a hypothec for his feu-duty, of the same kind with that just explained.

24. In tacks of houses, breweries, shops, and other tenements, which have no natural fruits, the furniture, and other goods brought into the subject set are hypothecated to the landlord for one year's rent. But the tenant may by sale impair this hypothec, as he might that of cattle in rural tenements; and indeed, in the particular case of a shop, the tenant rents it for no other purpose than as a place of sale.

SECT. VII. *Of the Transmission of Rights, by Confirmation and Resignation.*

clxviii.
Transmission of feudal rights.

1. A vassal may transmit his feu either to universal successors, as heirs: or to singular successors, i. e. those who acquire by gift, purchase, or other singular title. This last sort of transmission is either voluntary, by disposition; or necessary, by adjudication.

2. By the first feudal rules, no superior could be compelled to receive any vassal in the lands, other than the heir expressed in the investiture; for the superior alone had the power of ascertaining to what order of heirs the fee granted by himself was to descend. But this right of refusal in the superior did not take place, (1.) In the case of creditors appraisers or adjudgers, whom superiors were obliged to receive upon payment of a year's rent (1469, c. 37. 1672, c. 19.): (2.) In the case of purchasers of bankrupt estates, who were put on the same footing with adjudgers by 1690, c. 20. The crown refuses no voluntary disponent, on his paying a composition to the exchequer of a sixth part of the valued rent. Now, by 20 Geo. II. superiors are directed to enter all singular successors (except incorporations) who shall have got from the vassal a disposition, containing procuratory of resignation: they always receiving the fees or casualties that law entitles them to on a vassal's entry, i. e. a year's rent (A).

3. Base rights, i. e. dispositions to be holden of the disponent, are transmissions only of the property, the superiority remaining as formerly. As this kind of right might, before establishing the registers, have been kept quite concealed from all but the granter and receiver, a public right was preferable to it, unless clothed with possession: but as this distinction was no longer necessary after the establishment of the records, all infeftments are declared preferable, according to the dates of their several registrations; without respect to the former distinction of base and public, or of being clothed and not clothed with possession.

4. Public rights, i. e. dispositions to be holden of the granter's superior, may be perfected either by confirmation or resignation; and therefore they generally contain both precept of feisin and procuratory of resignation. When the receiver is to complete his right in the first way, he takes feisin upon the precept: but such feisin is ineffectual without the superior's confirmation; for the disponent cannot be deemed a vassal till the superior receive him as such, or confirm the holding. By the usual style in the transmission of lands, the disposition contains an obligation and precept of infeftment, both *à me* and *de me*, in the option of the disponent; upon which, if feisin is taken indefinitely, it is construed in favour of the disponent to be a base infeftment, because a public right is null without confirmation: but if the receiver shall afterwards obtain the superior's confirmation, it is considered as if it had been from the beginning a public right.

5. Where two several public rights of the same subject are confirmed by the superior, their preference is governed by the dates of the confirmations, not of the infeftments confirmed; because it is the confirmation which completes a public right.

6. Though a public right becomes, by the superior's confirmation, valid from its date; yet if any mid impediment intervene betwixt that period and the confirmation, to hinder the two from being conjoined, e. g. if the granter of a public right should afterwards grant a base right to another, upon which feisin is taken before the superior's confirmation of the first, the confirmation will have effect only from its own date; and consequently the base right first completed will carry the *property* of the lands preferable to the public one.

7. Resignation is that form of law, by which a vassal surrenders his feu to his superior; and it is either *ad perpetuam remanentiam*, or *in favorem*. In resignations *ad remanentiam*, where the feu is resigned, to the effect that it may remain with the superior, the superior, who before had the superiority, acquires, by the resignation, the property also of the lands resigned: and as his infeftment in the lands still subsisted, notwithstanding the right by which he had given his vassal the property; therefore, upon the vassal's resignation, the superior's

(A) It was long matter of doubt how this composition due to the superior upon the entry of singular successors should be regulated. The matter at last received a solemn decision; finding, That the superior is entitled, for the entry of singular successors, in all cases where such entries are not taxed, to a year's rent of the subject, whether lands or houses, as the same are set, or may be set at the time; deducting the feu-duty and all public burdens, and likewise all annual burdens imposed on the lands by consent of the superior, with all reasonable annual repairs to houses and other perishable subjects.

Law of Scotland. prior's right of property revives, and is consolidated with the superiority, without the necessity of a new investment; but the instrument of resignation must be recorded.

the right of reversion is granted in a separate writing, it is ineffectual against the singular successor of the wadsetter, unless it be registered in the register of feilins within 60 days after the date of the feisin upon the wadset.

Law of Scotland.

8. Resignations *in favorem* are made, not with an intention that the property resigned should remain with the superior, but that it should be again given by him, in favour either of the resigner himself, or of a third party; consequently the fee remains in the resigner, till the person in whose favour resignation is made gets his right from the superior perfected by feisin. And because resignations *in favorem* are but incomplete personal deeds, our law has made no provision for recording them. Hence, the first feisin on a second resignation is preferable to the last feisin upon the first resignation; but the superior, accepting a second resignation, whereupon a prior feisin may be taken in prejudice of the first resignatory, is liable in damages.

3. Rights of reversion are generally esteemed *stricti iuris*; yet they go to heirs, though heirs should not be mentioned, unless there be some clause in the right, discovering the intention of parties, that the reverfion should be personal to the reverfer himself. In like manner, though the right should not express a power to redeem from the wadsetter's heir, as well as from himself, redemption will be competent against the heir. All our lawyers have affirmed, that reversions cannot be assigned, unless they are taken to assignees; but from the favour of legal diligence, they may be adjudged.

Reversion is *stricti iuris*.

9. By our former decisions, one who was vested with a personal right of lands, i. e. a right not completed by feisin, effectually divested himself by disposing it to another; after which no right remained in the disposer, which could be carried by a second disposition, because a personal right is no more than a *ius obligationis*, which may be transferred by any deed sufficiently expressing the will of the granter. But this doctrine, at the same time that it rendered the security of the records extremely uncertain, was not truly applicable to such rights as required feisin to complete them; and therefore it now obtains, that the granter even of a personal right of lands is not so divested by conveying the right to one person, but that he may effectually make it over afterwards to another; and the preference between the two does not depend on the dates of the dispositions, but on the priority of the feilins following upon them.

4. Reversions commonly leave the reverfer at liberty to redeem the lands *quandocumque*, without restriction in point of time; but a clause is adjected to some reversions, that if the debt be not paid against a determinate day, the right of reversion shall be irritated, and the lands shall become the irredeemable property of the wadsetter. Nevertheless the irritancy being penal, as in wadsets, where the sum lent falls always short of the value of the lands, the right of redemption is by indulgence continued to the reverfer, even after the term has expired, while the irritancy is not declared. But the reverfer, if he does not take the benefit of this indulgence within 40 years after the lapse of the term, is cut out of it by prescription.

Redemption.

5. If the reverfer would redeem his lands, he must use an order of redemption against the wadsetter: the first step of which is premonition (or notice given under form of instrument) to the wadsetter, to appear at the time and place appointed by the reversion, then and there to receive payment of his debt, and thereupon to renounce his right of wadset. In the voluntary redemption of a right of wadset holden base, a renunciation duly registered re-establishes the reverfer in the full right of the lands. Where the wadset was granted to be holden of the granter's superior, the superior must receive the reverfer, on payment of a year's rent, if he produce a disposition from the wadsetter, containing procuratory of resignation. If, at executing the wadset, the superior has granted letters of regrefs, i. e. an obligation again to enter the reverfer upon redemption of the lands, he will be obliged to receive him without payment of the year's rent. But letters of regrefs will not have this effect against singular successors in the superiority, if they are not registered in the register of reversions. All wadsets that remain personal rights, are extinguished by simple discharges, though they should not be recorded.

Letters of regrefs.

SECT. VIII. Of Redeemable Rights.

1. An heritable right is said to be redeemable, when it contains a right of reversion, or return, in favour of the person from whom the right flows. Reversions are either legal, which arise from the law itself, as in adjudications, which law declares to be redeemable within a certain term after their date; or conventional, which are constituted by the agreement of parties, as in wadsets, rights of annualrent, and rights in security. A wadset (from wad or pledge) is a right, by which lands, or other heritable subjects, are impignored by the proprietor to his creditor in security of his debt; and, like other heritable rights, is perfected by feisin. The debtor, who grants the wadset, and has the right of reversion, is called the *reverfer*; and the creditor, receiver of the wadset, is called the *wadsetter*.

clxiv. reversions ga.

facter.

6. If the wadsetter either does not appear at the time and place appointed, or refuses the redemption money, the reverfer must consign it under form of instrument, in the hands of the person appointed in the right of reversion: or, if no person be named, in the hands of the clerk to the bills, a clerk of session, or any responsible person. An instrument of consignation, with the consignatory's receipt of the money consigned, completes the order of redemption, stops the farther currency of interest against the reverfer, and

Redemption money.

Law of Scotland. founds him in an action for declaring the order to be formal, and the lands to be redeemed in consequence of it.

7. After a decree of declarator is obtained, by which the lands are declared to return to the debtor, the consigned money, which comes in place of the lands, becomes the wadletter's, who therefore can charge the consignatory upon letters of horning to deliver it up to him; but, because the reverser may, at any time before decree, pass from his order, as one may do from any other step of diligence, the consigned sums continue to belong to the reverser, and the wadletter's interest in the wadset continues heritable till that period.

8. If the wadletter chooses to have his money rather than the lands, he must require from the reverser, under form of instrument, the sums due by the wadset, in terms of the right. The wadset-sums may be heritable, notwithstanding requisition, which may be passed from the wadletter even after the reverser has consigned the redemption money in consequence thereof.

Wadsets proper and improper.

9. Wadsets are either proper or improper. A proper wadset is that whereby it is agreed, that the use of the land shall go for the use of the money; so that the wadletter takes his hazard of the rents, and enjoys them without accounting, in satisfaction, or *in solutum* of his interest.

10. In an improper wadset, the reverser, if the rent should fall short of the interest, is taken bound to make up the deficiency; if it amounts to more, the wadletter is obliged to impute the excess towards extinction of the capital: And, as soon as the whole sums, principal, and interest, are extinguished by the wadletter's possession, he may be compelled to renounce, or divest himself in favour of the reverser.

11. If the wadletter be entitled by his right to enjoy the rents without accounting, and if at the same time the reverser be subjected to the hazard of their deficiency, such contract is justly declared usurious: and also in all proper wadsets wherein any unreasonable advantage has been taken of the debtor, the wadletter must (by act 1661), during the not requisition of the sum lent, either quit his possession to the debtor, upon his giving security to pay the interest, or subject himself to account for the surplus rents, as in improper wadsets.

Right of annualrent.

12. Infeftments of annualrent, the nature of which has been explained, are also redeemable rights. A right of annualrent does not carry the property of the lands; but it creates a real *nexus* or burden upon the property, for payment of the interest or annualrent contained in the right; and consequently the bygone interests due upon it are *debita fundi*. The annualrenter may therefore either insist in a real action for obtaining letters of poiding the ground, or sue the tenant in a personal action towards the payment of his past interest: and in a competition for those rents, the annualrenter's preference will not depend on his having used a poiding of the ground, for his right was completed by the seisin; the power of poiding the ground, arising from that antecedent right, is *meræ facultatis*, and need not be exercised, if payment can be otherwise got. As it is only the interest of the sum lent which is a burden upon the lands, the annualrenter, if he

wants his principal sum, cannot recover it either by poiding or by a personal action against the debtor's tenants; but must demand it from the debtor himself, on his personal obligation in the bond, either by requisition, or by a charge of letters of horning, according as the right is drawn.

Law of Scotland.

13. Rights of annualrent, being servitudes upon the property, and consequently consistent with the right of property in the debtor, may be extinguished without resignation.

14. Infeftments in security are another kind of redeemable rights (now frequently used in place of rights of annualrent), by which the receivers are infeft in the lands themselves, and not simply in an annualrent forth of them, for security of the principal sums, interest, and penalty, contained in the rights. If an infeftment in security be granted to a creditor, he may thereupon enter into the immediate possession of the lands or annualrent for his payment. They are extinguished as rights of annualrent.

Rights of security.

15. All rights of annualrent, rights in security, and generally whatever constitutes a real burden on the fee, may be the ground of an adjudication, which is preferable to all adjudications, or other diligences, intervening between the date of the right and of the adjudication deduced on it; not only for the principal sum contained in the right, but also for the whole past interest contained in the adjudication. This preference arises from the nature of real debts, or *debita fundi*: but in order to obtain it for the interest of the interest accumulated in the adjudication, such adjudication must proceed on a process of poiding the ground.

SECT. IX. Of Servitudes.

1. Servitude is a burden affecting lands, or rather heritable subjects, whereby the proprietor is either restrained from the full use of what is his own, or is obliged to suffer another to do something upon it. Servitudes are either *natural*, *legal*, or *conventional*. Nature itself may be said to constitute a servitude upon inferior tenements, whereby they must receive the water that falls from those that stand on higher ground. *Legal* servitudes are established by nature or custom, from considerations of public policy; among which may be numbered the restraints laid upon the proprietors of tenements within the city of Edinburgh. There is as great a variety of *conventional* servitudes, as there are ways by which the exercise of property may be restrained by paction in favour of another.

clxx. Different kinds of servitude.

2. *Conventional* servitudes are constituted, either by grant, where the will of the party burdened is expressed in writing: or by prescription, where his consent is presumed from his acquiescence in the burden for 40 years. A servitude constituted by writing, or grant, is not effectual against the grantor's singular successors, unless the grantee has been in the use or exercise of his right: but they are valid against the grantor and his heirs even without use. In servitudes that may be acquired by prescription, 40 years exercise of the rights is sufficient, without any title in writing, other than a charter and seisin of the lands to which the servitude is claimed to be due.

3. Servitudes constituted by grant are not effectual, in

in a question with the superior of the tenements burdened with the servitude, unless his consent be adhibited; for a superior cannot be hurt by his vassal's deed: but where the servitude is acquired by prescription, the consent of the superior, whose right afforded him a good title to interrupt, is implied. A servitude by grant, though followed only by a partial possession, must be governed, as to its extent, by the tenor of the grant; but a servitude by prescription is limited by the measure or degree of the use had by him who prescribes: agreeable to the maxim, *Tantum præscriptum, quantum possessum*.

4. Servitudes are either *predial* or *personal*. *Predial* servitudes are burdens imposed upon one tenement, in favour of another tenement. That to which the servitude is due is called the *dominant*, and that which owes it is called the *servient tenement*. No person can have right to a predial servitude, if he is not proprietor of some dominant tenement that may have benefit by it; for that right is annexed to a tenement, and so cannot pass from one person to another, unless some tenement goes along with it.

5. Predial servitudes are divided into *rural* servitudes, or of lands; and *urban* servitudes, or of houses. The rural servitudes of the Romans were *iter, actus, via, aquæductus, aquæhustus*, and *jus pascendi pecoris*. Similar servitudes may be constituted with us, of a foot-road, horse-road, cart-road, dams and aqueducts, watering of cattle, and pasturage. The right of a highway is not a servitude constituted in favour of a particular tenement, but is a right common to all travellers. The care of high-ways, bridges, and ferries, is committed to the sheriffs, justices of peace, and commissioners of supply in each shire.

6. Common pasturage, or the right of feeding one's cattle upon the property of another, is sometimes constituted by a general clause of pasturage in a charter or disposition, without mentioning the lands burdened; in which case, the right comprehends whatever had been formerly appropriated to the lands disposed of by the granter's own property, and likewise all pasturage due to them out of other lands. When a right of pasturage is given to several neighbouring proprietors, on a moor or common belonging to the granter, indefinite as to the number of cattle to be pastured, the extent of their several rights is to be proportioned according to the number that each of them can fodder in winter upon his own dominant tenement.

7. The chief servitudes of houses among the Romans were those of support, viz. *tigni immittendi*, and *oneris ferendi*. The first was the right of fixing in our neighbour's wall, a joist or beam from our house: the second was that of reiling the weight of one's house upon his neighbour's wall.

8. With us, where different floors or stories of the same house belong to different persons, as is frequent in the city of Edinburgh, the property of the house cannot be said to be entirely divided; the roof remains a common roof to the whole, and the area on which the house stands supports the whole; so that there is a communication of property, in consequence of which the proprietor of the ground floor must, without the constitution of any servitude, uphold it for the support of the upper, and the owner of the highest story must uphold that as a cover to the lower. When the high-

est is divided into garrets among the several proprietors, each proprietor is obliged, according to this rule, to uphold that part of the roof which covers his own garret.

6. No proprietor can build, so as to throw the rain water falling from his own house, immediately upon his neighbour's ground, without a special servitude, which is called of *stillicide*; but, if it falls within his own property, though at the smallest distance from the march, the owner of the inferior tenement must receive it.

10. The servitudes *altius non tollendi, et non officendi luminibus vel prospectui*, restrain proprietors from raising their houses beyond a certain height, or from making any building whatsoever that may hurt the light or prospect of the dominant tenement. These servitudes cannot be constituted by prescription alone: for, though a proprietor should have his house ever so low, or should not have built at all upon his grounds for 40 years together, he is presumed to have so for his own convenience or profit; and therefore cannot be barred from afterwards building a house on his property, or raising it to what height he pleases, unless he be tied down by his own consent.

11. We have two predial servitudes to which the Romans were strangers, viz. that of fuel or feal and divot, and of thirlage. The first is a right, by which the owner of the dominant tenement may turn up peats, turfs, feals, or divots, from the ground of the servient, and carry them off either for fuel, or thatch, or the other uses of his own tenement.

12. THIRLAGE is that servitude, by which lands are allotted, or thirled, to a particular mill; and the possessors bound to grind their grain there, for payment of certain multures and sequels as the agreed price of grinding. In this servitude, the mill is the dominant tenement and the lands allotted (which are called also the *thirl* or *sucken*) the servient. Multure is the quantity of grain or meal payable to the proprietor of the mill, or to the murtherer his tacksmen. The sequels are the small quantities given to the servants, under the name of *knave'ship, bannock*, and *lock* or *gowpen*. The quantities paid to the mill by the lands not allotted, are generally proportioned to the value of the labour, and are called *out-town* or *out-sucken multures*; but those paid by the thirl are ordinarily higher, and are called *in-town* or *in-sucken multures*.

13. Thirlage may be constituted by a landholder, when, in the disposition of certain lands, he allots them to his own mill; or when in the disposition of a mill, he allots his own lands to the mill disposed of; or when in letting his lands, he makes it a condition in the tacks. The grant of a mill with the general clause of multures, without specifying the lands allotted, conveys the thirlage of all the lands formerly allotted to that mill, whether they were the property of the granter, or of a third party.

14. A less formal constitution serves to allot barony lands to the mill of the barony, than is necessary in any other thirlage; which perhaps proceeds from the effects of the union betwixt the two. Hence, if a baron makes over the mill of a barony, *cum multuris*, or *cum allotis multuris*, it infers an allotment of the barony lands to the mill conveyed, although they had not formerly been allotted. But if prior to the baron's conveyance

Law of
Scotland.

conveyance of his mill *cum multuris*, he had sold any part of the barony lands to another *cum multuris*, the first purchaser's lands are not affected by the posterior grant; for a right of lands with the multures, implies a freedom of these lands from thirlage.

15. Thirlage is either, 1. Of grindable corns; or, 2. Of all growing corns: or, 3. Of the *invecta et illata*, i. e. of all the grain brought within the thirl, though of another growth. Where the thirlage is of grindable grain, it is in practice restricted to the corns which the tenants have occasion to grind, either for the support of their families, or for other uses; the surplus may be carried out of the thirl unmanufactured, without being liable in multure. Where it is of the *grana crescentia*, the whole grain growing upon the thirl is affected, with the exceptions, 1. Of seed and horse-corn, which are destined to uses inconsistent with grinding; and, 2. Of the farm duties due to the landlord, if they were delivered in grain not grinded. But, if the rent be payable in meal, flour, or malt, the grain of which these are made must be manufactured in the dominant mill.

16. The thirlage of *invecta et illata* is seldom constituted but against the inhabitants of a borough or village, that they shall grind all the unmanufactured grain they import thither at the dominant mill. Multure, therefore, cannot be exacted in a thirlage of *invecta et illata*, for flour or oatmeal brought into the servient tenement, unless the importer had bought it in grain, and grinded it at another mill. The same grain that owes multure, as *granum crescens*, to the mill in whose thirl it grew, if it shall be afterwards brought within a borough where the *invecta et illata* are thirled, must pay a second multure to the proprietor of that dominant tenement; but, where the right of these two thirlages is in the same proprietor, he cannot exact both. Where lands are thirled in general terms, without expressing the particular nature of the servitude, the lightest thirlage is presumed, from the favour of liberty; but in the restriction of a borough or village, where there is no growing grain which can be the subject of thirlage, the restriction of *invecta et illata* must be necessarily understood.

17. Thirlage, in the general case, cannot be established by prescription alone, for *ius quæ sunt mera facultatis non præscribitur*; but where one has paid for 40 years together the heavy in-sucken multures, the slightest title in writing will subject his lands. Thirlage may, contrary to the common rule, be constituted by prescription alone, 1. Where one pays to a mill a certain sum, or quantity of grain yearly, in name of multure, whether he grinds at it or not, (called *dry multure*). 2. In mills of the king's property; which is constituted *jure coronæ*, without titles in writing; and, where he derives right from another, his titles are more liable to be lost. This is extended in practice to mills belonging to church lands, where thirty years possession is deemed equivalent to a title in writing, from a presumption that their rights were destroyed at the Reformation. Though thirlage itself cannot be constituted by mere possession, the proportion of multure payable to the dominant tenement may be so fixed.

18. The possessors of the land affected are bound to uphold the mill, repair the dam dykes and aque-

ducts, and bring home the millstones. These services, though not expressed in the constitution, are implied.

19. Servitudes, being restraints upon property, are *stricti juris*: they are not therefore presumed if the acts upon which they are claimed can be explained consistently with freedom: and when servitudes are constituted, they ought to be used in the way least burdensome to the servient tenement. Hence, one who has a servitude of peats upon his neighbour's moor, is not at liberty to extend it for the use of any manufacture which may require an extraordinary expence of fuel: but must confine it to the natural uses of the dominant tenement.

20. Servitudes are extinguished, (1.) *Confusione*, when the person comes to be proprietor of the dominant and servient tenements; for *res sua nomini servit*, and the use the proprietor therefore makes of the servient tenement is not *jure servitutis*, but is an act of property. (2.) By the perishing either of the dominant or servient tenement. (3.) Servitudes are lost *non utendo*, by the dominant tenement neglecting to use the right of 40 years; which is considered as a dereliction of it, though he who has the servient tenement should have made no interruption by doing acts contrary to the servitude.

21. *Personal* servitudes are those by which the property of a subject is burdened, in favour, not of a tenement, but of a person. The only personal servitude known in our law, is usufruct or life-rent; which is a right to use and enjoy a thing during life, the substance of it being preserved. A life-rent cannot therefore be constituted upon things which perish in the use; and though it may upon subjects which gradually wear out by time, as household furniture, &c. yet with us, it is generally applied to heritable subjects. He whose property is burdened, is usually called the *fiar*.

22. Life-rents are divided into *convention* and *legal*. *Conventional* life-rents are either *simple*, or by *reservation*. A *simple life-rent*, or by a separate constitution, is that which is granted by the proprietor in favour of another: And this sort, contrary to the nature of predial servitudes, requires seisin in order to affect singular successors; for a life-rent of lands is, in strict speech, not a servitude, but a right resembling property which constitutes the life-renter vassal for life; and singular successors have no way of discovering a life-rent right, which perhaps is not yet commenced, but by the records: whereas, in predial servitudes, the constant use of the dominant tenement makes them public. The proper right of life-rent is intransmissible; *offibus usufructuarii inheret*: When the profits of the life-rented subject are transmitted to another, the right becomes merely personal: for it entitles the assignee to the rent, not during his own life, but his cedent's; and is therefore carried by simple assignation, without seisin.

23. A *life-rent by reservation*, is that which a proprietor reserves to himself in the same writing by which he conveys the fee to another. It requires no seisin; for the grantor's former seisin, which virtually included the life-rent, still subsists as to the life-rent which is expressly reserved. In conjunct investments taken to husband and wife, the wife's right of conjunct fee resolves, in the general case, into a life-rent.

24. Life-rents, *by law*, are the *terce* and the *cour-Terce*.

teffy.

aw of
otland.

165y. The *terce* (*tertia*) is a life-rent competent by law to widows, who have not accepted of special provisions, in the third of the heritable subjects in which their husbands died in-fee: and takes place only where the marriage has subsisted for year and day, or where a child has been born alive of it (B).

25. The *terce* is not limited to lands, but extends to teinds, and to servitudes and other burdens affecting lands; thus, the widow is entitled, in the right of her *terce*, to a life-rent of the third of the sums secured, either by rights of annual-rent, or by rights in security. In improper wadsets, the *terce* is a third of the sum lent: In those that are proper, it is a third of the wadset lands; or, in case of redemption, a third of the redemption money. Neither right of reversion, superiority, nor patronage, fall under the *terce*; for none of these have fixed profits, and so are not proper subjects for the widow's subsistence; nor tacks, because they are not feudal rights. Burgage tenements are also excluded from it, the reason of which is not so obvious. Since the husband's seisin is both the measure and security of the *terce*, such debts or diligences alone, as exclude the husband's seisin, can prevail over it.

26. Where a *terce* is due out of lands burdened with a prior *terce* still subsisting, the second *terce* has only right to a third of the two thirds that remain unaffected by the first *terce*. But upon the death of the first widow, whereby the lands are discharged of her *terce*, the lesser *terce* becomes enlarged, as if the first had never existed. A widow, who has accepted of a special provision from her husband, is thereby excluded from the *terce*, unless such provision shall contain a clause that she shall have right to both.

27. The widow has no title of possession, and so cannot receive the rents in virtue of her *terce*, till she be served to it; and in order to this, she must obtain a brief out of the chancery, directed to the sheriff, who calls an inquest, to take proof that she was wife to the deceased, and that her husband died in-fee in the subjects contained in the brief. The service or sentence of the jury, finding these points proved, does, without the necessity of a return to the chancery, entitle the wife to enter into the possession; but she can only possess with the heir *pro indiviso*, and so cannot remove tenants till the sheriff kens her to her *terce*, or divides the lands between her and the heir. In this division, after determining by lot or kaval, whether to begin by the sun or the shade, i. e. by the east or the west, the sheriff sets off the two first acres for the heir, and the third for the widow. Sometimes the division is executed, by giving one entire farm to the widow, and two of equal value to the heir. The widow's right is not properly constituted by this service; it was constituted before by the husband's seisin, and fixed by his death;

the service only declares it, and so entitles her to the third part of the rents *retro* to her husband's death, preferable to any rights that may have affected the lands in the intermediate period between that and her own service. The relief, if she was reputed to be lawful wife to the deceased, must be served, notwithstanding any objections by the heir against the marriage, which may be afterwards tried by the commissary.

28. *Courtesy* is a life-rent given by law, to the surviving husband, of all his wife's heritage in which she died in-fee, if there was a child of the marriage born alive. A marriage, though of the longest continuance gives no right to the courtesy, if there was no issue of it. The child born of the marriage must be the mother's heir: If she had a child of the former marriage, who is to succeed to her estate, the husband has no right to the courtesy while such child is alive; so that the courtesy is due to the husband, rather as father to an heir, than as husband to an heiress. Heritage is here opposed to conquest; and so is to be understood only of the heritable rights to which the wife succeeded as heir to her ancestors, excluding what she herself had acquired by singular titles.

29. Because the husband enjoys the life-rent of his wife's whole heritage, on a lucrative title, he is considered as her temporary representative; and so is liable in payment of all the yearly burdens chargeable on the subject, and of the current interest of all her debts, real and personal, to the value of the yearly rent he enjoys by the courtesy. The courtesy needs no solemnity to its constitution: That right which the husband had to the rents of his wife's estate during the marriage, *jure mariti*, is continued with him after her death, under the name of *courtesy*, by an act of the law itself. As in the *terce*, the husband's seisin is the ground and measure of the wife's right; so in the courtesy, the wife's seisin is the foundation of the husband's; and the two rights are, in all other respects, of the same nature; if it is not that the courtesy extends to burgage holdings, and to superiorities.

30. All life-renters must use their right *salva rei substantia*: whatever therefore is part of the fee itself, cannot be encroached on by the life-renter, e. g. woods or growing timber, even for the necessary uses of the life-rented tenement. But, where a coppice, or *silva cadua* has been divided into hags, one of which was in use to be cut annually by the proprietor, the life-renter may continue the former yearly cuttings; because these are considered as the annual fruits the subject was intended to yield, and so the proper subject of a life-rent.

31. Life-renters are bound to keep the subject life-rented in proper repair. They are also burdened with the alimony of the heir, where he has not enough for maintaining himself. The bare right of apparen-
founds

(B) In the case referred to, when treating of the effects of the dissolution of marriage within the year without a living child, and where no special provisions had been granted to, or accepted by, the widow; she did not demand her legal provisions of *terce* or *jus relicte*, but merely insisted, that as widow she was entitled to be *alimented* out of the heritable estate of which her husband died possessed: So that the decision in that case cannot so properly be said to be an alteration in the law, as an equitable interposition of the court of session, in their capacity as a court of equity, in order to grant a subsistence to the widow of a man whose estate was fully sufficient, and who, it could not reasonably be presumed, would have inclined that his widow should be left destitute, when his estate went perhaps to a distant series of heirs.

Law of
Scotland.

found the action against the liferenter. It is a burden personal to the life enter himself, and cannot be thrown upon his adjudging creditors as coming in his place by their diligences. Liferenters are also subjected to the payment of the yearly cesses, stipends, &c. falling due during their right, and to all other burdens that attend the subject liferented.

3. Liferent is extinguished by the liferenter's death. That part of the rents which the liferenter had a proper right to, before his death, falls to his executors; the rest, as never having been *in bonis* of the deceased, goes to the fiar. Martinmas and Whitsunday are, by our custom, the legal terms of the payment of rent: consequently, if a liferenter of lands survives the term of Whitsunday, his executors are entitled to the half of that year's rent, because it was due the term before his death; and if he survives the term of Martinmas, they have right to the whole. If the liferenter, being in the natural possession, and having first sowed the ground, should die, even before Whitsunday, his executors are entitled to the whole crop, in respect that both seed and industry were his. In a liferent of money constituted by a moveable bond, the executors have a right to the interest, down to the very day of the liferenter's death, where no terms are mentioned for the payment thereof; but in the case of an heritable bond, or of a money liferent secured on land, the interests of liferenter and fiar (or of heir and executor, for the same rules serve to fix the interests of both) are both governed by the legal terms of land rent, without regard to the conventional.

SECT. X. *Teinds.*

clxxi.
Teinds.

1. Teinds, or tithes, are that liquid proportion of our rents or goods, which is due to churchmen, for performing divine service, or exercising the other spiritual functions proper to their several offices. Most of the canonists affirm, that the precise proportion of a tenth, not only of the fruits of the ground, but of what is acquired by personal industry, is due to the Christian clergy, of divine right, which they therefore call the *proper patrimony of the church*; though it is certain that tithes, in their infancy, were given, not to the clergy alone, but to lay-monks who were called *pauperes*, and to other indigent persons. Charles the Great was the first secu'ar prince who acknowledged this right in the church. It appears to have been received with us, as far back as David I.

2. The person employed by a cathedral church or monastery to serve the cure in any church annexed was called a *vicar*, because he held the church, not in his own right, but in the right or *vice* of his employers; and so was removeable at pleasure, and had no share of the benefice, other than what they thought fit to allow him: but, in the course of time, the appellation of *vicar* was limited to those who were made perpetual, and who got a stated share of the benefice for their incumbency; from whence arose the distinction of benefices into parsonages and vicarages.

3. Parsonage teinds are the teinds of corn; and they are so called because they are due to the parson or other titular of the benefice. Vicarage teinds are the small teinds of calves, lint, hemp, eggs, &c. which were commonly given by the titular to the vicar who

served the cure in his place. The first sort was universally due, unless in the case of their infeudation to laics, or of a pontifical exemption; but by the customs of almost all Christendom, the lesser teinds were not demanded where they had not been in use to be paid. By the practice of Scotland, the teinds of animals, or of things produced from animals, as lambs, wool, calves, herbs, &c. are not tithable, unless use of payment be proved: neither are personal teinds (i. e. the tenth of what one acquires by his own industry) acknowledged by our law: yet they have been found due, when supported by 40 years possession.

4. The parson who was entitled to the teind of corns, made his right effectual, either by accepting of a certain number of teind bolls yearly from the proprietor in satisfaction of it; or, more frequently by drawing or separating upon the field his own tenth part of the corns, after they were reaped, from the stock or the remaining nine-tenths of the crop, and carrying it off to his own granaries; which is called *drawn teind*.

5. After the Reformation, James VI. considered himself as proprietor of all the church lands; partly because the purposes for which they had been granted were declared superstitious; and partly, in consequence of the resignations which he, and Queen Mary his mother, had procured from the beneficiaries: and even as to the teinds, though our reformed clergy also claimed them as the patrimony of the church, our sovereign did not submit to that doctrine farther than extended to a competent provision for ministers. He therefore erected or secularized several abbacies and priories into temporal lordships; the grantees of which were called sometimes *lords of erection*, and sometimes *titulars*, as having by their grants the same title to the erected benefices that the monasteries had formerly.

6. As the crown's revenue suffered greatly by these erections, the temporality of all church benefices (i. e. church lands) was, by 1587, c. 29. annexed to the crown. That statute excepts from the annexation such benefices as were established before the Reformation in laymen, whose rights the legislature had no intention to weaken. Notwithstanding this statute his majesty continued to make farther erections, which were declared null by 1592, c. 119. with an exception of such as had been made in favour of lords of parliament since the general act of annexation in 1587.

7. King Charles I. soon after his succession, raised a reduction of all these erections, whether granted before or after the act of annexation, upon the grounds mentioned at length by Mr Forbes in his *Treatise of Tithes*, p. 259. At last the whole matter was referred to the king himself by four several submissions or compromises; in which the parties on one side were the titulars and their tacksmen, the bishops with the inferior clergy, and the royal boroughs, for the interest they had in the teinds that were gifted for the provision of ministers, school, or hospitals within their boroughs; and, on the other part, the proprietors who wanted to have the leading of their own teinds. The submission by the titulars contained a surrender into his majesty's hands of the superiorities of their several erections.

8. Upon each of these submissions his majesty pronounced separate decrees arbitral, dated Sept. 2. 1629. which are subjoined to the acts of parliament of his reign.

Valuation
of teinds.

Law of Scotland.

Law of Scotland.

He made it lawful to proprietors to sue the titulars for a valuation, and if they thought fit for a sale also, of their teinds, before the commissioners named or to be named for that purpose. The rate of teind, when it was possessed by the proprietor jointly with the stock, for payment of a certain duty to the titular, and so did not admit a separate valuation, was fixed at a fifth part of the constant yearly rent, which was accounted a reasonable *furrigatum*, in place of a tenth of the increase. Where it was drawn by the titular, and consequently might be valued separately from the stock, it was to be valued as its extent should be ascertained, upon a proof before the commissioners; but in this last valuation, the king directed the fifth part to be deducted from the proved teind, in favour of the proprietor, which was therefore call the *king's ease*. The proprietor suing for a valuation gets the leading of his own teinds as soon as his suit commences, providing he does not allow protestation to be extracted against him for not insisting.

9. Where the proprietor insisted also for a sale of his teinds, the titular was obliged to sell them at nine years purchase of the valued teind duty. If the pursuer had a tack of his own teinds, not yet expired; or if the defender was only tacksmen of the teinds, and so could not give the pursuer an heritable right; an abatement of the price was to be granted accordingly by the commissioners.

10. There is no provision in the decrees arbitral, for selling the teinds granted for the sustentation of ministers, universities, schools, or hospitals; because these were to continue, as a perpetual fund, for the maintenance of the persons or societies to whom they were appropriated; and they are expressly declared not subject to sale, by 1690, c. 30.—1693, c. 23. By the last of these acts, it is also provided, that the teinds belonging to bishops, which had then fallen to the crown upon the abolishing of Episcopacy, should not be subject to sale as long as they remained with the crown not disposed of; nor those which the proprietor, who had right both to stock and teind, reserved to himself in a sale or feu of the lands. But, though none of these teinds can be sold, they may be valued.

ing's right the superiorities of edction.

11. The king, by the decrees arbitral, declared his own right to the superiorities of erection which had been resigned to him by the submission, reserving to the titulars the feu duties thereof, until payment by himself to them of 1000 merks Scots for every chaldar of feu victual, and for each 100 merks of feu duty; which right of redeeming the feu duties was afterwards renounced by the crown. If the church vassal should consent to hold his lands of the titular, he cannot thereafter recur to the crown as his immediate superior.

ules or ing the nt in the valuation of ds,

12. In explaining what the constant rent is by which the teind must be valued, the following rules are observed. The rent drawn by the proprietor from the sale of subjects, that are more properly parts of the land than of the fruits, e. g. quarries, minerals, mosses, &c. is to be deducted from the rental of the lands; and also the rent of supernumerary houses, over and above what is necessary for agriculture; and the additional rent that may be paid by the tenant, in consideration of the proprietor's undertaking any burden that law imposes on the tenant, e. g. uphold-

ing the tenant's houses, because none of these articles are paid properly on account of the fruits. Orchards must also be deducted, and mill rent, because the profits of a mill arise from industry; and the corns manufactured there suffer a valuation as rent payable by the tenant, and therefore ought not to be valued a second time against the titular as mill rent. The yearly expence of culture ought not to be deducted: for no rent can be produced without it: but, if an improvement of rent is made at an uncommon expence, e. g. by draining a lake, the proprietor is allowed a reasonable abatement on that account.

13. Notwithstanding the several ways of misapplying parochial teinds in the times of Popery, some few benefices remained entire in the hands of the parsons. The ministers planted in these, after the Reformation, continued to have the full right to them, as proper beneficiaries: but a power was afterwards granted to the patron, to redeem the whole teind from such beneficiaries, upon their getting a competent stipend modified to them; which teind so redeemed, the patron is obliged to sell to the proprietor, at six years purchase.

Teinds reddeable, &c.

14. Some teinds are more directly subject to an allocation for the minister's stipend than others. The teinds in the hands of the lay titular fall first to be allocated, who, since he is not capable to leave the cure in his own person, ought to provide one who can; and if the titular, in place of drawing the teind, has set it in tack, the tack duty is allocated: this sort is called *free teind*. Where the tack duty, which is the titular's interest in the teinds, falls short, the tack itself is burdened, or, in other words, the surplus teind over and above the tack duty: but, in this case, the commissioners are empowered to recompense the tacksmen, by prorogating his tack for such a number of years as they shall judge equitable. Where this likewise proves deficient, the allocation falls on the teinds heritably conveyed by the titular, unless he has warranted his grant against future augmentations; in which case, the teinds of the lands belonging in property to the titular himself must be allocated in the first place.

15. Where there is sufficiency of free teinds in a parish, the titular may allocate any of them he shall think fit for the minister's stipend, since they are all his own; unless there has been a previous decree of locality: and this holds, though the stipend should have been paid immemorably out of the teinds of certain particular lands. This right was frequently abused by titulars, who, as soon as a proprietor had brought an action of sale of his teinds, allocated the pursuer's full teind for the stipend, whereby such action became ineffectual; it was therefore provided, that after citation in a sale of teinds, it shall not be in the titular's power to allocate the pursuer's teinds solely, but only in proportion with the other teinds in the parish.

16. Ministers glebes are declared free from the payment of teind. Lands *cum decimis inclusis* are also exempted from teind. But in order to exempt lands from payment of teind, it is necessary that the proprietor prove his right thereto, *cum decimis inclusis*, as far back as the above act of annexation 1587.

Ministers glebes, &c. exempted from teinds.

17. Teinds are *debita fructuum*, not *fundi*. The action therefore for bygone teinds is only personal, against those who have intermeddled, unless where the titular

Law of
Scotland.

titular is infest in the lands, in security of the valued teind duty. Where a tenant is, by his tack, bound to pay a joint duty to the landlord for stock and teind, without distinguishing the rent of each, his defence of a *bona fide* payment of the whole to the landlord has been sustained in a suit at the instance of a laic titular, but repelled where a churchman was pursuer. In both cases the proprietor who receives such rent is liable as intermeddler.

Inhibition
of teinds.

18. In tacks of teinds, as of lands, there is place for tacit relocation: to stop the effect of which, the titular must obtain and execute an inhibition of teinds against the tacksmen; which differs much from inhibition of lands (explained under the next section), and is intended merely to interpel or inhibit the tacksmen from farther intermeddling. This diligence of inhibition may also be used at the suit of the titular, against any other possessor of the teinds; and if the tacksmen or possessor shall intermeddle after the inhibition is executed, he is liable in a spuilzie.

19. Lands and teinds pass by different titles: a disposition of lands, therefore, though granted by one who has also right to the teind, will not carry the teind, unless it shall appear from special circumstances that a sale of both was designed by the parties. In lands *cum decimis inclusis*, where the teinds are consolidated with the stock, the right of both must necessarily go together in all cases.

SECT. XI. Of Inhibitions.

clxxii.

1. The constitution and transmission of feudal rights being explained, and the burdens with which they are chargeable, it remains to be considered how these rights may be affected at the suit of creditors by legal diligence. Diligences are certain forms of law, whereby a creditor endeavours to make good his payment, either by affecting the person of his debtor, or by securing the subjects belonging to him from alienation, or by carrying the property of these subjects to himself. They are either real or personal. Real diligence is that which is proper to heritable or real rights; personal, is that by which the person of the debtor may be secured, or his personal estate affected. Of the first sort we have two, viz. inhibition and adjudication.

Diligences.

Inhibition.

2. Inhibition is a personal prohibition, which passes by letters under the signet, prohibiting the party inhibited to contract any debt, or do any deed, by which any part of his lands may be aliened or carried off in prejudice of the creditor inhibiting. It must be executed against the debtor, personally, or at his dwelling house, as summonses, and thereafter published and registered in the same manner with interdictions, (see N^o clxxxiii. 21.)

3. Inhibition may proceed, either upon a liquid obligation, or even on an action commenced by a creditor for making good a claim not yet sustained by the judge; which last is called *inhibition upon a depending action*. The summons, which constitutes the dependence, must be executed against the debtor before the letters of inhibition pass the signet; for no suit can be said to depend against one till he be cited in it as a defender: but the effect of such inhibition is suspended till decree be obtained in the action against

the debtor; and in the same manner, inhibitions on conditional debts have no effect till the condition be purified. Inhibitions are not granted, without a trial of the cause, when they proceed on conditional debts. And though, in other cases, inhibitions now pass of course, the lords are in use to stay, or recall them, either on the debtor's showing cause why the diligence should not proceed, or even *ex officio* where the ground of the diligence is doubtful.

L. w. of
Scotland

4. Though inhibitions, by their uniform style, disable the debtor from selling his moveable as well as his heritable estate, their effect has been long limited to heritage, from the interruption that such an embargo upon moveables must have given to commerce; so that debts contracted after inhibition may be the foundation of diligence against the debtor's person and moveable estate. An inhibition secures the inhibitor against the alienation, not only of lands that belonged to his debtor when he was inhibited, but of those that he shall afterwards acquire: but no inhibition can extend to such after-purchases as lie in a jurisdiction where the inhibition was not registered; for it could not have extended to these through they had been made prior to the inhibition.

Limited to
heritage.

5. This diligence only strikes against the voluntary debts or deeds of the inhibited person: it does not restrain him from granting necessary deeds, i. e. such as he was obliged to grant anterior to the inhibition, since he might have been compelled to grant these before the inhibitor had acquired any right by his diligence. By this rule, a wadsetter or annualrenter might, after being inhibited, have effectually renounced his right to the reverser on payment, because law could have compelled him to it; but to secure inhibitors against the effect of such alienations, it is declared by act of sederunt of the court of session, Feb. 19. 1680, that, after intimation of the inhibition to the reverser, no renunciation or grant of redemption shall be sustained, except upon declarator of redemption brought by him, to which the inhibitor must be made a party.

6. An inhibition is a diligence simply prohibitory, so that the debt, on which it proceeds, continues personal after the diligence; and consequently, the inhibitor, in a question with anterior creditors whose debts are not struck at by the inhibition, is only preferable from the period at which his debt is made real by adjudication: and where debts are contracted on heritable security, though posterior to the inhibition, the inhibitor's debt, being personal, cannot be ranked with them; he only draws back from the creditors ranked the sums contained in his diligence. The heir of the person inhibited is not restrained from alienation by the diligence used against his ancestor; for the prohibition is personal, affecting only the debtor against whom the diligence is used.

Is simply
prohibitory.

7. Inhibitions do not of themselves make void the posterior debts or deeds of the person inhibited; they only afford a title to the user of the diligence to set them aside, if he finds them hurtful to him: and even where a debt is actually reduced *ex capite inhibitionis*, such reduction, being founded solely in the inhibitor's interest, is profitable to him alone, and cannot alter the natural preference of the other creditors.

8. Inhibitions may be reduced upon legal nullities, arising from purging of inhibitions.

Law of Scotland.

Law of Scotland.

arising either from the ground of debt or the form of diligence. When payment is made by the debtor to the inhibitor, the inhibition is said to be *purged*. Any creditor, whose debt is struck at by the inhibition, may, upon making payment to the inhibitor, compel him to assign the debt and diligence in his favour, that he may make good his payment the more effectually against the common debtor.

SECT. XII. *Of Comprisings, Adjudications, and Judicial Sales.*

1. Heritable rights may be carried from the debtor to the creditor, either by the diligence of appraising (now adjudication), or by a judicial sale carried on before the court of session. Appraising, or comprising, was the sentence of a sheriff, or of a messenger who was specially constituted sheriff for that purpose, by which the heritable rights belonging to the debtor were sold for payment of the debt due to the appraiser; so that appraisings were, by their original constitution, proper sales of the debtor's lands to any purchaser who offered. If no purchaser could be found, the sheriff was to appraise or tax the value of the lands by an inquest (whence came the name of *appraising*), and to make over to the creditor lands to the value of the debt. A full history of appraisings will be found in the beginning of Mr Erskine's large *Institute* under this title; it being considered as unnecessary to enter into a deduction now no longer necessary, as by the act 1672 adjudications were substituted in their place.

2. That creditors may have access to affect the estate of their deceased debtor, though the heir should stand off from entering, it is made lawful (by 1540, c. 16.) for any creditor to charge the heir of his debtor to enter to his ancestor (year and day being past after the ancestor's death), within 40 days after the charge; and if the heir fails, the creditor may proceed to appraise his debtor's lands, as if the heir had been entered. Custom has so explained this statute, that the creditor may charge the heir, immediately after the death of his ancestor, provided that the summons which is to be founded on the charge be not raised till after the expiry both of the year and of the 40 days next ensuing the year, within which the heir is charged to enter.— But this statute relates only to such charges on which appraising is to be led against the ancestor's land; for in those which are to be barely the foundation of a common summons or process against the heir, action will be sustained if the year be elapsed from the ancestor's death before the execution of the summons, though the 40 days should not be also expired. Though the statute authorises such charges against majors only, practice has also extended it against minors, and the rule is extended to the case where the heir is the debtor. One must, in this matter, distinguish between a general and a special charge. A general charge serves only to fix the representation of the heir who is charged, so as to make the debt his which was formerly his ancestor's: but a special charge makes up for the want of a service (N^o clxxx. 25.); and states the heir, *scilicet* *juris*, in the right of the subjects to which he is charged to enter. Where, therefore, the heir is the debtor, a general charge for fixing the representation against him is unnecessary, since the only

concern of the creditor is, that his debtor make up titles to the ancestor's estate, which is done by a special charge: but where the deceased was the debtor, the creditor must first charge his heir to enter in general, that it may be known whether he is to represent the debtor: if he does not enter within forty days, the debt may be fixed against him by a decree of constitution; after which the heritable rights belonging to the ancestor will fall to be attached; in doing which, the diligence to be used is different, according to the state of the titles in the ancestor's person: for if the ancestor stood vested by investment, the heir must be charged to enter heir in special; but if the ancestor had but a personal right to the subjects (i. e. not perfected by seisin), which would have been carried to the heir by a general service, then what is called a *general special charge* must be given to the heir. These charges either special or general special, as the circumstances of the case may require, are by the statute 1540 made equivalent to the heir's actual entry; and therefore an adjudication led after the *inducere* of the charges are elapsed, effectually carries to the creditor the subjects to which the heir was charged to enter.

3. Appraisings in course of time underwent many changes in their form and effect, till at length, by act 1672, c. 19. adjudications were substituted in their place, and are carried on by way of action before the court of session. By that statute, such part of the debtor's lands is to be adjudged as is equivalent to the principal sum and interest of the debt, with the composition due to the superior and expences of investment, and a fifth part more in respect the creditor is obliged to take land for his money. The debtor must deliver to the creditor a valid right of the lands to be adjudged, or transumps thereof, renounce the possession in his favour, and ratify the decree of adjudication: and law considers the rent of the houses as precisely commensurated to the interest of the debt; so that the adjudger lies under no obligation to account for the surplus rents. In this, which is called a *special adjudication*, the legal, or time within which the debtor may redeem, is declared to be five years; and the creditor attaining possession upon it can use no farther execution against the debtor, unless the lands be evicted from him.

4. Where the debtor does not produce a sufficient right to the lands, or is not willing to renounce the possession, and ratify the decree (which is the case that has most frequently happened), the statute makes it lawful for the creditor to adjudge all right belonging to the debtor in the same manner, and under the same reversion of ten years, as he could, by the former laws have appraised it. In this last kind, which is called a *general adjudication*, the creditor must limit his claim to the principal sum, interest, and penalty, without demanding a fifth part more. But no general adjudication can be insisted on, without libelling in the summons the other alternative of a special adjudication; for special adjudications are introduced by the statute in the place of appraisings; and it is only where the debtor refuses to comply with the terms thereof, that the creditor can lead a general adjudication.

5. Abbreviates are ordained to be made of all adjudications, which must be recorded within 60 days after the date of the decree. In every other respect,

Law of
Scotland.

general adjudications have the same effects that appraisings had: adjudgers in possession are accountable for the surplus rents; a citation in adjudications renders the subject litigious; superiors are obliged to enter adjudgers; the legal of adjudications does not expire during the debtor's minority, &c. Only it may be observed, that though appraisings could not proceed before the term of payment, yet where the debtor is *vergens ad inopiam*, the court *ex nobili officio* admit adjudication for the debt before it be payable. But this sort being founded solely in equity, subsists merely as a security, and cannot carry the property to the creditor by the lapse of any length of time.

Two kinds
of adjudica-
tions.

6. There are two kinds of adjudication, which took place at the same time with appraisings, and still obtain; viz. adjudications on a decree *cognitionis causa*, otherwise called *contra hereditatem jacentem*; and adjudications *in implement*. Where the debtor's apparent heir, who is charged to enter, formally renounces the succession, the creditor may obtain a decree *cognitionis causa*; in which, though the heir renouncing is cited for the sake of form, no sentence condemnatory can be pronounced against him, in respect of his renunciation; the only effect of it is to subject the *hereditas jacentis* to the creditor's diligence.

7. Adjudications *contra hereditatem jacentem*, carry not only the lands themselves that belonged to the deceased, but the rents thereof fallen due since his death; for these, as an accessory to the estate belonging to the deceased, would have descended to the heir if he had entered, which rule is applied to all adjudications led on a special charge. This sort of adjudication is declared redeemable within seven years, by any co-adjudging creditor, either of the deceased debtor or of the heir renouncing. The heir himself, who renounces, cannot be restored against his renunciation, nor consequently redeem, if he be not a minor. But even a major may redeem indirectly, by granting a simulate bond to a confident person: the adjudication upon which, when conveyed to himself, is a good title to redeem all other adjudications against the lands belonging to his ancestor.

8. Adjudications *in implement* are deduced against those who have granted deeds without procuratory of resignation or precept of seisin, and refuse to divest themselves; to the end that the subject conveyed may be effectually vested in the grantee. These adjudications may be also directed against the heir of the grantee, upon a charge to enter. Here there is no place for a legal reversion; for, as the adjudication is led for completing the right of a special subject, it must carry that subject as irredeemably as if the right had been voluntarily completed.

9. All adjudications led within year and day of that one which has been made first effectual by seisin (where seisin is necessary), or exact diligence for obtaining seisin, are preferable *pari passu*. The year and day runs from the date of the adjudication, and not of the seisin or diligence, for obtaining it. After the days of that period, they are preferable according to their dates. All the co-adjudgers within the year are preferable *pari passu*, as if one adjudication had been led for all their debts. This makes the seisin or diligence on the first adjudication a common right to the rest, who must therefore refund to the owner of that dili-

gence his whole expence laid out in carrying on and completing it. And though that first adjudication should be redeemed, the diligence upon it still subsists as to the rest. This *pari passu* preference, however, does not destroy the legal preference of adjudications led on *debita fundi* (see N^o clxix. 15.); nor does it take place in adjudications in implement.

A new sort of adjudication has been lately introduced into the law of Scotland by the act of the 23d Geo. III. for rendering the payment of the creditors of insolvent debtors more equal and expeditious. Among the many other provisos in that statute for expediting the payment of creditors, and lessening the expence of diligence against the debtor's estate, it is enacted, That upon an order from the court of session or lord ordinary, the bankrupt shall be bound to execute a disposition or dispositions, making over to the trustee or trustees chosen by the creditors the whole estate real and personal, wherever situated; and in case of the bankrupt's refusal, or of the order not being complied with from any other reason, the court or the lord ordinary shall, upon the application of the trustee, issue an act or decree, adjudging the property of the whole sequestrated estate to be in the trustee for behoof of the creditors; which shall have the same effect as if the bankrupt had executed the conveyance: and by a subsequent clause in the statute, it is enacted, that this disposition of the heritable estate, together with the order of the court or lord ordinary on which it proceeds, or failing thereof, the decree of adjudication of the court or the lord ordinary, shall within 60 days of the date thereof be registered in the register of abbreviates of adjudications; and shall have the effect to entitle the trustee for behoof of the whole creditors to rank in the same manner upon the heritable estate as if it had been a proper decree of adjudication, obtained at the date of the interlocutor awarding the sequestration; accumulating the whole debts, principal and interest, as at that period, and adjudging for security or payment thereof, so as to rank *pari passu* with any prior effectual adjudication, and within year and day of the same. By this act also, in order to lessen the number of adjudications, and consequently the expence upon a bankrupt estate, it is declared, that intimation shall be made of the first adjudication which is called, so as all creditors who are in readiness may, within such a reasonable time as may be allowed, not exceeding twenty federunt days, produce their grounds of debt, and be conjoined in the decree to follow on said first adjudication. At the same time it may be proper to mention, that this act is only temporary; and after eight years experience, will probably suffer very considerable alterations, when it shall become necessary to digest another bankrupt law for Scotland.

10. Before treating of judicial sales of bankrupts' estates, the nature of *sequestration* may be shortly explained, which is a diligence that generally utters in actions of sale. Sequestration of lands is a judicial act of the court of session, whereby the management of an estate is put into the hands of a factor or steward named by the court, who gives security, and is to be accountable for the rents to all having interest. This diligence is competent, either where the right of the lands is doubtful, if it be applied for before either of the competitors has attained possession, or where the estate is heavily

Law of
Scotland.

Sequestra-
tion.

heavily charged with debts: but, as it is an unfavourable diligence, it is not admitted, unless that measure shall appear necessary for the security of creditors. Subjects not brought before the court by the diligence of creditors, cannot fall under sequestration; for it is the competition of creditors which alone founds the jurisdiction of the court to take the disputed subject into their possession.

11. The court of session who decrees the sequestration has the nomination of the factor, in which they are directed by the recommendation of the creditors. A factor appointed by the session, though the proprietor had not been in feft in the lands, has a power to remove tenants. Judicial factors must, within six months after extracting their factory, make up a rental of the estate, and a list of the arrears due by tenants, to be put into the hands of the clerk of the process, as a charge against themselves, and a note of such alterations in the rental as may afterwards happen: and must also deliver to the clerk annually a scheme of their accounts, charge and discharge, under heavy penalties. They are, by the nature of their office, bound to the same degree of diligence that a prudent man adhibits in his own affairs; they are accountable for the interest of the rents, which they either have, or by diligence might have, recovered, from a year after their falling due. As it is much in the power of those factors to take advantage of the necessities of creditors, by purchasing their debts at an undervalue, all such purchases made either by the factor himself, or to his behoof, are declared equivalent to an acquittance or extinction of the debt. No factor can warrantably pay to any creditor, without an order of the court of session; for he is, by the tenor of his commission, directed to pay the rents to those who shall be found to have the best right to them. Judicial factors are entitled to a salary, which is generally stated at five per cent. of their intromissions: but it is seldom ascertained till their office expires, or till their accounting; that the court may modify a greater or smaller salary, or none, in proportion to the factor's integrity and diligence. Many cases occur, where the court of session, without sequestration, name a factor to preserve the rents from perishing; e. g. where an heir is deliberating whether to enter, where a minor is without tutors, where a succession opens to a person residing abroad; in all which cases the factor is subjected to the rules laid down in act of sederunt, Feb. 13. 1730.

As to sequestrations under the bankrupt act before recited, the reader must necessarily be referred to the act itself; for being only temporary, as before mentioned, it seems quite inconsistent with the plan of this work to enter into a minute detail of the different regulations thereby laid down in cases of sequestration under it.

12. The word *bankrupt* is sometimes applied to persons whose funds are not sufficient for their debts; and sometimes, not to the debtor, but to his estate. The court of session are empowered, at the suit of any real creditor, to try the value of a bankrupt's estate, and sell it for the payment of his debts.

13. No process of sale, at the suit of a creditor, can proceed without a proof of the debtor's bankruptcy, or at least that his lands are so charged with debts that no prudent persons will buy from him; and therefore

the summons of sale must comprehend the debtor's whole estate. The debtor, or his apparent heir, and all the real creditors in possession, must be made parties to the suit; but it is sufficient if the other creditors be called by an edictal citation. The summons of sale contains a conclusion of ranking, or preference of the bankrupt's creditors. In this ranking, first and second terms are assigned to the whole creditors for exhibiting in court (or producing) their rights and diligences; and the decree of certification proceeding thereupon, against the writings not produced, has the same effect in favour of the creditors who have produced their rights, as if that decree had proceeded upon an action of reduction improbation. See N^o clxxxiii. 3. By the late bankrupt act, the sale may precede the ranking of the creditors, unless the court, upon application of the creditors, or any of them, shall find sufficient cause to delay the sale. The irredeemable property of the lands is adjudged by the court to the highest offerer at the sale. The creditors receiving payment must grant to the purchaser absolute warrandice, to the extent of the sum received by them; and the lands purchased are declared discharged of all debts or deeds of the bankrupt or his ancestors, either on payment of the price by the purchaser to the creditors according to their preference, or on consignment of it. By the act 1695, purchasers were bound to consign the price in the hands of the magistrates of Edinburgh; but by § 5. of the above act, they may consign it in the Royal Bank or Bank of Scotland. The only remedy provided to such creditors as judge themselves hurt by the sale or division of the price, even though they should be minors, is an action for recovering their share of the price against the creditors who have received it.

14. The expence of these processes is disbursed by the factor out of the rents in his hands; by which the whole burden of such expence falls upon the posterior creditors.

15. Apparent heirs are entitled to bring actions of sale of the estates belonging to their ancestors, whether bankrupt or not; the expence of which ought to fall upon the pursuer, if there is any excrescence of the price, after payment of the creditors: but if there be no excrescence, the creditors, who alone are gainers by the sale, ought to bear the charge of it.

16. As processes of ranking and sale are designed for the common interest of all the creditors, no diligence carried on or completed during their pendency ought to give any preference in the competition; *pendente lite, nihil innovandum.*

17. It is a rule in all real diligences, that where a creditor is preferable on several different subjects, he cannot use his preference arbitrarily, by favouring one creditor more than another; but must allocate his universal or catholic debt proportionally against all the subjects or parties whom it affects. If it is material to such creditor to draw his whole payment out of any one fund, he may apply his debt so as may best secure himself: but that inequality will be rectified as to the posterior creditors, who had likewise by their rights and diligences, affected the subjects out of which he drew his payment, by obliging him to assign in their favour his right upon the separate subjects which he did not use in the ranking; by which they may recur against these separate subjects for the shares which the debt

Law of Scotland.

Ranking of creditors.

Law of
Scotland.

debt preferred might have drawn out of them. As the obligation to assign is founded merely in equity, the catholic creditor cannot be compelled to it, if this assigning shall weaken the preference of any separate debt vested in himself, affecting the special subject sought to be assigned. But if a creditor upon a special subject shall acquire from another a catholic right, or a catholic creditor shall purchase a debt affecting a special subject, with a view of creating to the special debt a higher degree of preference than was naturally due to it, by an arbitrary application of the catholic debt, equity cannot protect him from assigning in favour of the creditor excluded by such application, especially if, prior to the purchase, the subject has become litigious by the process of ranking.

II. MOVEABLE RIGHTS.

THE law of heritable rights being explained, *Moveable* Rights fall next to be considered; the doctrine of which depends chiefly on the nature of obligations.

SECT. XIII. *Of Obligations and Contracts in General.*

cxxxiii.
Obligation.

An obligation is a legal tie, by which one is bound to pay or perform something to another. Every obligation on the person obliged implies an opposite right in the creditor, so that what is a burden in regard to the one is right with respect to the other; and all rights founded on obligation are called *personal*. There is this essential difference between a real and a personal right, that a *ius in re*, whether of property, or of an inferior kind, as servitude, entitles the person vested with it to possess the subject as his own; or if he is not in possession, to demand it from the possessors: whereas the creditor in a personal right has only *ius ad rem*, or a right to compel the debtor to fulfil his obligation; without any right in the subject itself, which the debtor is bound to transfer to him. One cannot oblige himself, but by a present act of the will. A bare resolution, therefore, or purpose, to be obliged, is alterable at pleasure.

Division of
obligations.

2. Obligations are either, (1.) Merely natural, where one person is bound to another by the law of nature, but cannot be compelled by any civil action to the performance. Thus, though deeds granted by a minor having curators, without their consent, are null, yet the minor is naturally obliged to perform such deeds; and parents are naturally obliged to provide their children in reasonable patrimonies. Natural obligations entitle the creditor to retain what he has got in virtue thereof, without being subjected to restore it. (2.) Obligations are merely civil, which may be sued upon by an action, but are elided by an exception in equity; this is the case of obligations granted through force or fear, &c. (3.) Proper or full obligations, are those which are supported both by equity and the civil sanction.

3. Obligations may also be divided into, (1.) Pure, to which neither day nor condition is adjoined. These may be exacted immediately. (2.) Obligations (*ex die*), which have a day adjoined to their performance. In these, *dies statim credit, sed non venit*; a proper debt arises from the date of the obligation, because it is certain that the day will exist; but the execution is sus-

pending till the lapse of that day. (3.) Conditional obligations; in which there is no proper debt (*dies non credit*) till the condition be purified, because it is possible the condition may never exist; and which therefore are said to create only the hope of a debt; but the granter, even of these, has no right to refuse. An obligation, to which a day is adjoined that possibly may never exist, implies a condition; *dies incertus pro conditione habetur*. Thus, in the case of a provision to a child, payable when he attains to the age of fourteen, if the child dies before that age, the provision falls.

4. Obligations, when considered with regard to their cause, were divided by the Romans into those arising from contract, quasi contract, delict, and quasi delict: but there are certain obligations, even full and proper ones, which cannot be derived from any of these sources, and to which Lord Stair gives the name of *obediential*. Such as the obligation on parents to alimment or maintain their children; which arises singly from the relation of parent and child, and may be enforced by the civil magistrate. Under parents are comprehended, the mother, grandfather, and grandmother, in their proper order. This obligation on parents extends to the providing of their issue in all the necessaries of life, and giving them suitable education. It ceases, when the children can earn a livelihood by their own industry; but the obligation on parents to maintain their indigent children, and reciprocally on children to maintain their indigent parents, is perpetual. This obligation is, on the father's death, transferred to the eldest son, the heir of the family; who, as representing the father, must alimment his younger brothers and sisters: the brothers are only entitled to alimony till their age of twenty-one, after which they are presumed able to do for themselves; but the obligation to maintain the sisters continues till their marriage. In persons of lower rank, the obligation to alimment the sisters ceases after they are capable of subsisting by any service or employment.

5. All obligations, arising from the natural duty of restitution, fall under this class; thus, things given upon the view of a certain event, must be restored, if that event does not afterwards exist: thus also, things given *ob turpem causam*, where the turpitude is in the receiver and not in the giver, must be restored. And on the same principle, one upon whose ground a house is built or repaired by another, is obliged, without any covenant, to restore the expence laid out upon it, in so far as it has been profitable to him.

6. A contract is the voluntary agreement of two or more persons, whereby something is to be given or performed upon one part, for a valuable consideration, either present or future, on the other part. Consent, which is implied in agreement, is excluded, (1.) By error in the essentials of the contract: for, in such case, the party does not properly contract, but errs or is deceived; and this may be also applied to contracts which take their rise from fraud or imposition. (2.) Consent is excluded by such a degree of restraint upon any of the contracting parties, as extorts the agreement; for where violence or threatening are used against a person, his will has really no part in the contract.

7. Loan, or *mutuum*, is that contract which obliges a person, who has borrowed any fungible subject from another, to restore to him as much of the same kind,

Law of
Scotland.

Contract.

and

Law of Scotland.

and of equal goodness. Whatever receives its estimation in number, weight, or measure, is a fungible; as corn, wine, current coin, &c. The only proper subjects of this contract are things which cannot be used without either their extinction or alienation: hence the property of the thing lent is necessarily transferred by delivery to the borrower, who consequently must run all the hazards either of its deterioration or its perishing, according to the rule, *res perit suo domino*. Where the borrower neglects to restore at the time and place agreed on, the estimation of the thing lent must be made according to its price at that time and in that place; because it would have been worth so much to the lender, if the obligation had been duly performed. If there is no place nor time stipulated for, the value is to be stated according to the price that the commodity gave when and where it was demanded. In the loan of money, the value put on it by public authority, and not its intrinsic worth, is to be considered. This contract is one of those called by the Romans *unilateral*, being obligatory only on one part; for the lender is subjected to no obligation: the only action therefore that it produces, is pointed against the borrower, that he may restore as much in quantity and quality as he borrowed, together with the damage the lender may have suffered through default of due performance.

8. *Commodate* is a species of loan, gratuitous on the part of the lender, where the thing lent may be used, without either its perishing or its alienation. Hence, in this sort of loan, the property continues with the lender; the only right the borrower acquires in the subject is its use, after which he must restore the individual thing that he borrowed: consequently, if the subject perishes, it perishes to the lender, unless it has perished by the borrower's fault. What degree of fault or negligence makes either of the contracting parties liable to the other in damages, is comprehended under the following rules. Where the contract gives a mutual benefit to both parties, each contractor is bound to exhibit a middle sort of diligence, such as a man of ordinary prudence uses in his affairs. Where only one of the parties has benefit by the contract, that party must use exact diligence; and the other who has no advantage by it, is accountable only for dole, or for gross omissions, which the law construes to be dole. Where one employs less care on the subject of any contract which implies an exuberant trust, than he is known to employ in his own affairs, it is considered as dole.

9. Hence it will appear that this is a *bilateral* contract; the borrower must be exactly careful of the thing lent, and restore it at the time fixed by the contract, or after that use is made of it for which it was lent: if he puts it to any other use, or neglects to restore it at the time covenanted, and if the thing perishes thereafter even by mere accident, he is bound to pay the value. On the other part the lender is obliged to restore to the borrower such of the expences disbursed by him on that subject as arose from any uncommon accident, but not those that naturally attend the use of it. Where a thing is lent gratuitously, without specifying any time of redelivery, it constitutes the contract of *precarium*, which is revocable at the lender's pleasure, and, being entered into from a personal regard to the borrower, ceases by his death.

10. *Depositum* is also a *bilateral* contract, by which one who has the custody of a thing committed to him (the depositary) is obliged to restore it to the depositor. If a reward is bargained for by the depositary for his care, it resolves into the contract of location. As this contract is gratuitous, the depositary is only answerable for the consequences of gross neglect; but after the deposit is redemanded, he is accountable even for casual misfortunes. He is entitled to a full indemnification for the losses he has sustained by the contract, and to the recovery of all sums expended by him on the subject.

11. An obligation arises without formal paction, barely by a traveller's entering into an inn, ship, or stable, and there depositing his goods, or putting up his horses; whereby the innkeeper, shipmaster, or stabler, is accountable, not only for his own facts and those of his servants (which is an obligation implied in the very exercise of these employments), but of the other guests or passengers; and, indeed, in every case, unless where the goods have been lost *damno fatali*, or carried off by pirates or house-breakers. Not only the masters of ships, but their employers, are liable each of them for the share that he has in the ship; but by the present custom of trading nations, the goods brought into a ship must have been delivered to the master or mate, or entered into the ship books. Carriers fall within the intendment of this law; and practice has extended it to vintners within borough. The extent of the damage sustained by the party may be proved by his own oath *in litem*.

12. *Sequestration*, whether voluntarily consented to by the parties, or authorized by the judge, is a kind of deposit; but as to the office of sequestrator, to whose care the subject in dispute is committed, is not considered as gratuitous, he cannot throw it up at pleasure, as a common depositary may do; and he is liable in the middle degree of diligence. *Consignation* of money is also a deposit. It may be made, either where the debt is called in question by the debtor, as in suspensions; or where the creditor refuses to receive his money, as in wadsets, &c. The risk of the consigned money lies on the consigner, where he ought to have made payment, and not consignation; or has consigned only a part; or has chosen for consignatory, a person neither named by the parties nor of good credit. The charger, or other creditor, runs the risk, if he has charged for sums not due, or has without good reason refused payment, by which refusal the consignation became necessary. It is the office of a consignatory, to keep the money in safe custody till it be called for: if therefore he puts it out at interest, he must run the hazard of the debtor's insolvency; but for the same reason, though he should draw interest for it, he is liable in none to the consigner.

13. *Pledge*, when opposed to wadset, is a contract, by which a debtor puts into the hands of his creditor a special moveable subject in security of the debt, to be redelivered on payment. Where a security is established by law to the creditor, upon a subject which continues in the debtor's possession, it has the special name of an hypothec. Tradesmen and ship carpenters have an hypothec on the house or ship repaired, for the materials and other charges of reparation; but not for the expence of building a new ship. This, however, must

Law of Scotland.
Depositum.

Sequestratio.

Consignatio.

Pledge.

Hypothec.

Law of
Scotland.

must not now be understood to apply universally: for the court of session, in different cases which lately occurred before them, and founding upon the law and practice of England in similar cases, have found, that no hypothec exists for the expence of repairs done in a home port. Owners of ships have an hypothec on the cargo for the freight; heritors on the fruits of the ground; and landlords on the *inveſta et illata*, for their rents. Writers also, and agents, have a right of hypothec, or more properly of retention, in their constituent's writings, for their claim of pains and disbursements. A creditor cannot, for his own payment, sell the subject impignorated, without applying to the judge ordinary for a warrant to put it up to public sale or roup; and to this application the debtor ought to be made a party.

SECT. XIV. *Of Obligations by Word or Writ.*

clxiv.
Verbal
agreement.

1. The appellation of *verbal* may be applied to all obligations to the constitution of which writing is not essential, which includes both real and consensual contracts; but as these are explained under separate titles, obligations *by word*, in the sense of this rubric, must be restricted, either to promises, or to such verbal agreements as have no special name to distinguish them. Agreement implies the intervention of two different parties, who come under mutual obligations to one another. Where nothing is to be given or performed but on one part, it is properly called a *promise*; which, as it is gratuitous, does not require the acceptance of him to whom the promise is made. An offer, which must be distinguished from a promise, implies something to be done by the other party; and consequently is not binding on the offerer, till it be accepted, with its limitations or conditions, by him to whom the offer is made; after which, it becomes a proper agreement.

Writing.

2. Writing must necessarily intervene in all obligations and bargains concerning heritable subjects, though they should be only temporary; as tacks, which, when they are verbal, last but for one year. In these, no verbal agreement is binding, though it should be referred to the oath of the party; for, till writing is adhibited, law gives both parties a right to reſile, as from an unfinished bargain; which is called *locus pœnitentiæ*. If, upon a verbal bargain of lands, part of the price shall be paid by him who was to purchase, the *interventus rei*, the actual payment of money, creates a valid obligation, and gives a beginning to the contract of sale: and, in general, wherever matters are no longer entire, the right to reſile seems to be excluded. An agreement, whereby a real right is passed from, or restricted, called *pactum liberatorium*, may be perfected verbally; for freedom is favourable, and the purpose of such agreement is rather to dissolve than to create an obligation. Writing is also essential to bargains made under condition that they shall be reduced into writing; for in such cases, it is *pars contractus*, that, till writing be adhibited, both parties shall have liberty to withdraw. In the same manner, verbal or nuncupative testaments are rejected by our law; but verbal legacies are sustained, where they do not exceed 100l. Scots.

3. Anciently, when writing was little used, deeds

2

were executed by the party appending his seal to them in presence of witnesses. For preventing frauds that might happen by appending seals to false deeds, the subscription also of the granter was afterwards required, and, if he could not write, that of a notary. As it might be of dangerous consequences to give full force to the subscription of the parties by initials, which is more easily counterfeited; our practice, in order to sustain such subscription, seems to require a proof, not only that the granter used to subscribe in that way, but that *de facto* he had subscribed the deed in question; at least, such proof is required, if the instrumentary witnesses be still alive.

4. As a further check, it was afterwards provided, that all writings carrying any heritable right, and other deeds of importance, be subscribed by the principal parties, if they can subscribe; otherwise, by two notaries, before four witnesses specially designed. The subsequent practice extended this requisite of the designation of the witnesses to the case where the parties themselves subscribed. Custom has construed obligations for sums exceeding 100l. Scots, to be obligations of importance. In a divisible obligation, ex. gr. for a sum of money, though exceeding 100l. the subscription of one notary is sufficient, if the creditor restricts his claim to 100l.: But in an obligation indivisible, e. g. for the performance of a fact, if it be not subscribed in terms of the statute, it is void. When notaries thus attest a deed, the attestation or docquet must specially express that the granter gave them a mandate to sign; nor is it sufficient that this be mentioned in the body of the writing.

5. In every deed, the name of him who writes it, with his dwelling place, or other mark of distinction, must be inserted. The witnesses must both subscribe as witnesses, and their names and designations be inserted in the body of the deed. And all subscribing witnesses must know the granter, and either see him subscribe, or hear him acknowledge his subscription; otherwise they are declared punishable as accessory to forgery. Deeds, decrees, and other securities, consisting of more than one sheet, may be written by way of book, in place of the former custom of pasting together the several sheets, and signing the joinings on the margin; provided each page be signed by the granter, and marked by its number, and the testing clause express the number of pages.

6. Instruments of seisin are valid, if subscribed by one notary, before a reasonable number of witnesses; which is extended by practice to instruments of resignation. Two witnesses are deemed a reasonable number to every deed that can be executed by one notary. It is not necessary that the witnesses to a notarial instrument or execution see the notary or messenger sign; for they are called as witnesses to the transaction which is attested, and not to the subscription of the person attesting.

7. A new requisite has been added to certain deeds since the Union, for the benefit of the revenue: They must be executed on stamped paper, or parchment, paying a certain duty to the crown. These duties must also be paid before wrote upon, under a penalty; but they are so numerous and complex, that it would be tedious, even if it fell under our plan, to enter into an enumeration of them. They will be found at length,

length in Swinton's Abridgement, *voce Stamps*, to which the reader is referred. Certain judicial deeds, such as bail bonds, bonds of cautionry, in suspensions, &c. are exempted, and do not require stamps, as will be seen from the several acts referred to by the compiler of the above abridgement of the statutes.

8. The granter's name and designation are essential, not properly as solemnities, but because no writing can have effect without them. Bonds were, by our ancient practice, frequently executed without filling up the creditor's name; and they passed from hand to hand, like notes payable to the bearer: But as there was no method for the creditor of a person possessed of these to secure them for his payment, all writings taken blank in the creditor's name are declared null, as covers to fraud; with the exception of indorsations of bills of exchange.

privileged
ds.

9. Certain privileged writings do not require the ordinary solemnities.

1. Holograph deeds (written by the granter himself) are effectual without witnesses. The date of no holograph writing, except a bill of exchange (see next parag.), can be proved by the granter's own assertion, in prejudice either of his heir or his creditors, but must be supported by other adminicles.

2. Testaments, if executed where men of skill and business cannot be had, are valid though they should not be quite formal: and let the subject of a testament be ever so valuable, one notary signing for the testator, before two witnesses, is in practice sufficient. Clergymen were frequently notaries before the Reformation; and, though they were afterwards prohibited to act as notaries, the case of testaments is excepted; so that these are supported by the attestation of one minister, with two witnesses. 3. Discharges to tenants are sustained without witnesses, from their presumed rusticity, or ignorance in business. 4. Mistive letters *in re mercatoria*, commissions, and fitted accounts in the course of trade, and bills of exchange, though they are not holograph, are, from the favour of commerce, sustained without the ordinary solemnities.

of ex-
age.

10. A bill of exchange is an obligation in the form of a mandate, whereby the drawer or mandate desires him to whom it is directed, to pay a certain sum, at the day and place therein mentioned, to a third party. Bills of exchange are drawn by a person in one country to his correspondent in another; and they have that name, because it is the exchange, or the value of money in one place compared with its value in another, that generally determines the precise extent of the sum contained in the draught. The creditor in the bill is sometimes called the possessor, or *porteur*. As parties to bills are of different countries, questions concerning them ought to be determined by the received custom of trading nations, unless where special statute interposes. For this reason, bills of exchange, though their form admits not of witnesses, yet prove their own dates, in questions either with the heir or creditors of the debtor; but this doctrine is not extended to inland bills payable to the drawer himself.

ir so-
nities
obli-
ons.

11. A bill is valid, without the designation either of the drawer or of the person to whom it is made payable: It is enough, that the drawer's subscription appears to be truly his; and one's being possessor of a bill marks him out to be the creditor if he bears the name given in the bill to the creditor: Nay, though

the person drawn on should not be designed, his acceptance presumes that it was he whom the drawer had in his eye. Bills drawn blank, in the creditor's name, fall under the statutory nullity; for though indorsations of bills are excepted from it, bills themselves are not. Not only the person drawn upon must sign his acceptance, but the drawer must sign his draught, before any obligation can be formed against the acceptor: Yet it is sufficient in practice, that the drawer signs before the bill be produced in judgement; though it should be after the death both of the creditor and acceptor. A creditor in a bill may transmit it to another by indorsation, though the bill should not bear *to his order*; by the same rule that other rights are transmissible by assignation, though they do not bear *to assignees*.

Obligations,

12. The drawer, by signing his draught, becomes liable for the value to the creditor in the bill, in case the person drawn upon either does not accept, or after acceptance does not pay; for he is presumed to have received value from the creditor at giving him the draught, though it should not bear *for value received*: But, if the drawer was debtor to the creditor in the bill before the draught, the bill is presumed to be given towards payment of the debt, unless it expressly bears *for value*. The person drawn upon, if he refuse to accept, while he has the drawer's money in his hands, is liable to him in damages. As a bill presumes value from the creditor, indorsation presumes value from the indorsee; who therefore, if he cannot obtain payment from the acceptor, has recourse against the indorser, unless the bill be indorsed in these words, *without recourse*.

13. Payment of a bill, by the acceptor, acquires both the drawer and him at the hands of the creditor: but it entitles the acceptor, if he was not the drawer's debtor, to an action of recourse against him; and, if he was, to a ground of compensation. Where the bill does not bear value in the hands of the person drawn upon, it is presumed that he is not the drawer's debtor, and consequently he has recourse against the drawer, *ex mandato*.

14. Bills, when indorsed, are considered as so many bags of money delivered to the onerous indorsee; which therefore carry right to the contents, free of all burdens that do not appear on the bills themselves. Hence, a receipt or discharge, by the original creditor, if granted on a separate paper, does not exempt the acceptor from second payment to the indorsee; hence, also, no ground of compensation competent to the acceptor against the original creditor can be pleaded against the indorsee: but, if the debtor shall prove, by the oath of the indorsee, either that the bill is indorsed to him for the indorser's own behoof, or that he paid not the full value for the indorsation, the indorsee is justly considered as but a name; and therefore all exceptions, receivable against the original creditor, will be sustained against him. A protested bill, after registration, cannot be transmitted by indorsation, but by assignation.

15. Bills must be negotiated by the possessor, against the person drawn upon, within a precise time, in order to preserve recourse against the drawer. In bills payable so many days after sight, the creditor has a discretionary power of fixing the payment somewhat sooner or later, as his occasions shall require. Bills payable on a day certain, need not be presented for acceptance till the day of payment, because that day can

L. w of
Scotland.

neither be prolonged nor shortened by the time of acceptance. For the same reason, the acceptance of bills, payable on a precise day, need not be dated: but, where a bill is drawn payable so many days after sight, it must; because there the term of payment depends on the date of acceptance.

Days of
grace.

16. Though bills are, in strict law, due the very day on which they are made payable, and may therefore be protested on the day thereafter; yet there are three days immediately following the day of payment, called *days of grace*, within any of which the creditor may protest the bill; but if he delay protesting till the day after the last day of grace, he loses his recourse. Where a bill is protested, either from not acceptance or not payment, the dishonour must be notified to the drawer or indorser, within three posts at farthest. This strictness of negotiation is confined to such bills as may be protested by the possessor upon the third day of grace: where, therefore, bills are indorsed after the days of grace are expired, the indorsee is left more at liberty, and does not lose his recourse, though he should not take a formal protest for not payment, if, within a reasonable time, he shall give the indorser notice of the acceptor's refusing to pay. Not only does the possessor, who neglects strict negotiation, lose his recourse against the drawer, where the person drawn upon becomes afterwards bankrupt; but though he should continue solvent: for he may in that case recover payment from the debtor, and so is not to be indulged in an unnecessary process against the drawer, which he has tacitly renounced by his negligence. Recourse is preserved against the drawer, though the bill should not be duly negotiated, if the person drawn upon was not his debtor; for there the drawer can qualify no prejudice by the neglect of diligence, and he ought not to have drawn on one who owed him nothing.

Privileges
of bills by
statute.

17. The privileges superadded to bills by statute are, that though, by their form, they can have no clause of registration, yet, if duly protested, they are registrable within six months after their date in case of not acceptance, or in six months after the term of payment in the case of not payment; which registration is made the foundation of summary diligence, either against the drawer or indorser in the case of not acceptance, or against the acceptor in the case of not payment. This is extended to inland bills, i. e. bills both drawn and made payable in Scotland. After acceptance, summary diligence lies against no other than the acceptor; the drawer and indorser must be pursued by an ordinary action. It is only the principal sum in the bill, and interest, that can be charged for summarily: the exchange, when it is not included in the draught, the re-exchange incurred by suffering the bill to be protested and returned, and the expence of diligence, must all be recovered by an ordinary action; because these are not liquid debts, and so must be previously constituted.

Inland bills.

18. Bills, when drawn payable at any considerable distance of time after date, are denied the privileges of bills: for bills are intended for currency, and not to lie as a security in the creditor's hands. Bills are not valid which appear *ex facie* to be donations. No extrinsic stipulation ought to be contained in a bill which deviates from the proper nature of bills: hence, a bill to which a penalty is adjoined, or with a clause of interest from the date is, null. Inland precepts drawn,

Certain
bills not
privileged.

not for money the medium of trade, but for fungibles, are null, as wanting writer's name and witnesses. It is not an agreed point whether promissory notes, without writer and witnesses, unless holograph, are probative.

Law
Scotla

19. So stood the law of Scotland, in regard to bills and promissory notes, previous to the statute 12 Geo. III. By that statute, however, the law of Scotland has undergone very material alterations. They are declared to have the same privileges, and to prescribe in six years after the term of payment. Bank notes and post bills are excepted from this prescription: nor does it run during the years of the creditor's minority. Inland bills and promissory notes must be protested within the days of grace, to secure recourse; and the dishonour notified within 14 days after the protest. Summary diligence may pass not only against the acceptor, but likewise against the drawer, and all the indorsees jointly and severally; and at the instance of any indorsee, though the bill was not protested in his name, upon his producing a receipt or letter from the protesting indorsee. This act was in force only for seven years after 15th May 1772, and to the end of the then next session of parliament. But as it was found by experience that it had been of great advantage to Scotland, it was made perpetual by the late act 23. Geo. III. so that it has now become a permanent part of the law of Scotland.

notes.

20. As for the solemnities essential to deeds signed in a foreign country, where they come to receive execution in Scotland, it is a general rule, that no law can be of authority beyond the dominions of the lawgiver. Hence, in strictness, no deed, though perfected according to the law of the place where it is signed, can have effect in another country where different solemnities are required to a deed of that sort. But this rigour is softened *ex comitate*, by the common consent of nations, that all personal obligations granted according to the law of that country where they are signed, are effectual everywhere; which obtains in obligations to convey heritage. Conveyances themselves, however, of heritable subjects must be perfected according to the law of the country where the heritage lies, and from which it cannot be removed.

21. A writing, while the grantor keeps it under his own power or his doer's, has no force; it becomes obligatory, only after it is delivered to the grantee himself, or found in the hands of a third person. As to which last, the following rules are observed. A deed found in the hands of one who is doer both for the grantor and grantee, is presumed to have been put in his hands as doer for the grantee. The presumption is also for delivery, if the deed appears in the hands of one who is a stranger to both. Where a deed is deposited in the hands of a third person, the terms of deposition may be proved by the oath of the depositary, unless where they are reduced into writing. A deed appearing in the custody of the grantee himself is considered as his absolute right; inasmuch that the grantor is not allowed to prove that it was granted in trust, otherwise than by a written declaration signed by the trustee, or by his oath.

Deliver
and de
tation o
deeds.

22. The following deeds are effectual without delivery. (1.) Writings containing a clause dispensing with the delivery; these are of the nature of revocable deeds, where the death of the grantor is equivalent to delivery,

What
effectu
withou
livery.

Law of Scotland. delivery, because after death there can be no revocation. (2.) Deeds in favour of children, even natural ones; for parents are the proper custodians or keepers of their children's writings. From a similar reason, postnuptial settlements by the husband to the wife need no delivery. (3.) Rights which are not to take effect till the grantor's death, or even where he reserves an interest to himself during his life; for it is presumed he holds the custody of these, merely to secure to himself such reserved interest. (4.) Deeds which the grantor lay under an antecedent natural obligation to execute, e. g. rights granted to a cautioner for his relief. (5.) Mutual obligations, e. g. contracts for every such deed, the moment it is executed, is a common evident to all the parties contractors. Lastly, The publication of a writing by registration is equivalent to delivery.

quantity of farm-wheat, sold without distinguishing the parcel to be delivered from the rest of the farm. (3.) The *periculum* lies on the vender till delivery, if he be obliged by a special article in the contract to deliver the subject at a certain place.

Law of Scotland.

4. *Location* is that contract where a hire is stipulated for the use of things, or for the service of persons. He who lets his work or the use of his property to hire, is the locator or lessor; and the other, the conductor or lessee. In the location of things, the lessor is obliged to deliver the subject, fitted to the use it was let for; and the lessee must preserve it carefully, put it to no other use, and, after that is over, restore it. Where a workman or artificer lets his labour, and if the work is either not performed according to contract, or if it be insufficient, even from mere unskilfulness, he is liable to his employer in damages, for he ought not, as an artificer, to have undertaken a work to which he was not equal. A servant hired for a certain term is entitled to his full wages, though from sickness or other accident he should be disabled for a part of his time: but if he die before the term, his wages are only due for the time he actually served. If a master dies, or without good reason turns off, before the term, a servant who eats in his house, the servant is entitled to his full wages, and to his maintenance till that term; and, on the other part, a servant who without ground deserts his service, forfeits his wages and maintenance, and is liable to his master in damages.

Location.

SECT. XV. *Of Obligations and Contracts arising from Consent, and of accessory Obligations.*

1. Contracts consensual (i. e. which might, by the Roman law, be perfected by the sole consent, without the intervention either of things or of writing,) are *sale, permutation, location, society, and mandate*. Where the subject of any of these contracts is heritable, writing is necessary.

2. *Sale* is a contract, by which one becomes obliged to give something to another, in consideration of a certain price in current money to be paid for it. Things consisting merely in hope, may be the subject of this contract, as the draught of a net. Commodities, where their importation or use is absolutely prohibited, cannot be the subject of sale; and even in run goods, no action lies against the vender for the delivery, if the buyer knew the goods were run. So far indeed has this principle been carried, and so anxious have our judges been to put a stop to the practice of smuggling, that in different cases which have occurred of action being brought at the distance of a foreign merchant against persons resident in Scotland for payment of goods which had been smuggled, a distinction has been made betwixt the case of the foreign merchant being or not being a native of Scotland. Where the foreign merchant was a native of Scotland, it has been presumed that he was acquainted with the revenue law of the country, and that he was in a manner *versans in re illicita*; and therefore action has been denied for recovery of the price of such goods: but where, on the other hand, the foreign merchant was not a native of Scotland, nowise amenable to, and even presumed ignorant of its laws, he has with justice been allowed action for the price of such goods, unless it were shown that he had in fact been *particeps criminis*, by aiding the smuggle. The same principle has regulated the decisions in the courts of England in cases of a similar nature, which have within these few years come before them.

3. Though this contract may be perfected before delivery of the subject, the property remains till then with the vender: (See N^o clxii. 9.) Yet till delivery, the hazard of its deterioration falls on the purchaser, because he has all the profits arising from it after the sale. On the other hand, the subject itself perishes to the vender: (1.) If it should perish through his fault, or after his undue delay to deliver it. (2.) If a subject is sold as a fungible, and not as an individual, or *corpus*, e. g. a

5. *Society or copartnership* is a contract, whereby the several partners agree concerning the communication of loss and gain arising from the subject of the contract. It is formed by the reciprocal choice which the partners make one of another; and so is not constituted in the case of co-heirs, or of several legatees in the same subject. A copartnership may be so constituted, that one of the partners shall, either from his sole right of property in the subject, or from his superior skill, be entitled to a certain share of the profits, without being subjected to any part of the loss; but a society, where one partner is to bear a certain proportion of loss, without being entitled to any share of the profits, called by the Romans *societas leonina*, is justly reprobated. All the partners are entitled to shares of profit and loss proportioned to their several stocks where it is not otherwise covenanted.

6. As partners are united, from a *delectus personæ*, in a kind of brotherhood, no partner can, without a special power contained in the contract, transfer any part of his share to another. All the partners are bound *in solidum* by the obligation of any one of them, if he subscribe by the *first* or social name of the company; unless it be a deed that falls not under the common course of administration. The company effects are the common property of the society subjected to its debts; so that no partner can claim a division thereof, even after the society is dissolved, till they are paid; and, consequently, no creditor of a partner can, by diligence, carry to himself the property of any part of the common stock, in prejudice of a company creditor: but he may, by arrestment, secure his debtor's share in the company's hands, to be made forthcoming to him at the close of the copartnership, in so far as it is not exhausted by the company debts.

7. Society being founded in the mutual confidence among

Law of
Scotland.

among the *socii*, is dissolved, not only by the renunciation, but by the death of any one of them, if it be not otherwise specially covenanted. A partner who renounces upon unfair views, or at a critical time, when his withdrawing may be fatal to the society, loses his partners from all their engagements to him, while he is bound to them for all the profits he shall make by his withdrawing, and for the loss arising thereby to the company. Not only natural, but civil death, *e. g.* arising from a sentence inflicting capital punishment, makes one incapable to perform the duties of a partner, and consequently dissolves the society. In both cases of death and renunciation, the remaining partners may continue the copartnership, either expressly, by entering into a new contract; or tacitly, by carrying on their trade as formerly. Public trading companies are now every day constituted, with rules very different from those which either obtained in the Roman law, or at this day obtain in private societies. The proprietors or partners in these, though they may transfer their shares, cannot renounce; nor does their death dissolve the company, but the shares of the deceased descend to his representative.

A joint
trade.

8. A *joint trade* is not a copartnership, but a momentary contract, where two or more persons agree to contribute a sum, to be employed in a particular course of trade, the produce whereof is to be divided among the adventurers; according to their several shares, after the voyage is finished. If, in a joint trade, that partner who is intrusted with the money for purchasing the goods, should, in place of paying them in cash, buy them upon credit, the furnisher who followed his faith alone in the sale, has no recourse against the other adventurers, he can only recover from them what of the buyer's share is yet in their hands. Where any one of the adventurers in a joint trade becomes bankrupt, the others are preferable to his creditors, upon the common stock, as long as it continues undivided, for their relief of all the engagements entered into by them on account of the adventure.

Mandate.

9. *Mandate* is a contract, by which one employs another to manage any business for him; and by the Roman law, it must have been gratuitous. It may be constituted tacitly, by one's suffering another to act in a certain branch of his affairs, for a tract of time together, without challenge. The mandatory is at liberty not to accept of the mandate; and, as his powers are solely founded in the mandant's commission, he must, if he undertakes it, strictly adhere to the directions given him: Nor is it a good defence, that the method he followed was more rational; for in that his employer was the proper judge. Where no special rules are prescribed, the mandatory, if he acts prudently, is secure, whatever the success may be; and he can sue for the recovery of all the expences reasonably disbursed by him in the execution of his office.

10. *Mandate* may be general, containing a power of administering the mandant's whole affairs; but no mandate implies a power of disposing gratuitously of the constituent's property, nor even of selling his heritage for an adequate price; but a general mandatory may sell such of the moveables as must otherwise perish. No mandatory can, without special powers, transfer doubtful claims belonging to his constituent, or refer them to arbiters.

Law of
Scotland.

11. *Mandates* expire, (1.) By the revocation of the employer, though only tacit, as if he should name another mandatory for the same business. (2.) By the renunciation of the mandatory; even after he has executed a part of his commission, if his office be gratuitous. (3.) By the death either of the mandant or mandatory: But if matters are not entire, the mandate continues in force, notwithstanding such revocation, renunciation, or death. Procuratories of resignation and precepts of seisin are made out in the form of mandates; but, because they are granted for the sole benefit of the mandatory, all of them, excepting precepts of *clarè constat*, are declared (by act 1693) to continue after the death either of the granter or grantee. Deeds which contain a clause or mandate for registration, are for the same reason made registrable after the death of either (by act 1693 and 1696.)

12. The favour of commerce has introduced a tacit mandate, by which masters of ships are empowered to contract in name of their exercitors or employers, for repairs, ship-provisions, and whatever else may be necessary for the ship or crew; so as to oblige not themselves only, but their employers. Whoever has the actual charge of the ship is deemed the master, though he should have no commission from the exercitors, or should be substituted by the master in the direction of the ship without their knowledge. Exercitors are liable, whether the master has paid his own money to a merchant for necessaries, or has borrowed money to purchase them. The furnisher or lender must prove that the ship needed repairs, provision, &c. to such an extent; but he is under no necessity to prove the application of the money or materials to the ship's use. If there are several exercitors, they are liable *singuli in solidum*. In the same manner the undertaker of any branch of trade, manufacture, or other land negotiation is bound by the contracts of the infitors whom he sets over it, in so far as relates to the subject of the *præpositura*.

13. Contracts and obligations, in themselves imperfect, receive strength by the contractor or his heirs doing any act thereafter which imports an approbation of them, and consequently supplies the want of an original legal consent. This is called *homologation*; and it takes place even in deeds intrinsically null, whether the nullity arises from the want of statutory solemnities, or from the incapacity of the granter. It cannot be inferred, (1.) By the act of a person who was not in the knowledge of the original deed; for one cannot approve what he is ignorant of. (2.) *Homologation* has no place where the act or deed, which is pleaded as such, can be ascribed to any other cause; for an intention to come under an obligation is not presumed.

14. *Quasi-contracts* are formed without explicit consent, by one of the parties doing something which by its nature either obliges him to the other party, or the other party to him. Under this class may be reckoned tutory, &c. the entry of an heir, *negotiorum gestio, indebiti solutio*. communion of goods between two or more common proprietors, and *mercium jactus levande navis causa*. *Negotiorum gestio* forms those obligations which arise from the management of a person's affairs, in his absence, by another, without an mandate. As such manager acts without authority from the proprietor, he ought to be liable in exact diligence, unless he has from

Law of Scotland.

Law of Scotland.

from friendship interposed in affairs which admitted no delay: and he is accountable for his intromissions with interest. On the other part, he is entitled to the recovery of his necessary disbursements on the subject, and to be relieved of the obligations in which he may have bound himself in consequence of the management.

15. *Indebiti solutio*, or the payment to one of what is not due to him, if made through any mistake, either of fact, or even of law, founds him who made the payment in an action against the receiver for repayment (*condictio indebiti*.) This action does not lie, (1.) If the sum paid was due *ex equitate*, or by a natural obligation: for the obligation to restore is founded solely in equity. (2.) If he who made the payment knew that nothing was due: for *qui consulto dat quod non debebat, præsumitur donare*.

Right of: ing com- n propi-

16. Where two or more persons become common proprietors of the same subject, either by legacy, gift, or purchase, without the view of copartnership, an obligation is thereby created among the proprietors to communicate the profit and loss arising from the subject, while it remains common: And the subject may be divided at the suit of any having interest. This division, where the question is among the common proprietors, is according to the valuation of their respective properties: But where the question is between the proprietors and those having servitudes upon the property, the superficies is only divided, without prejudice to the property. Commonities belonging to the king, or to royal boroughs, are not divisible. Lands lying runrig, and belonging to different proprietors, may be divided, with the exception of borough and incorporated acres; the execution of which is committed to the judge ordinary, or justices of the peace.

ex Rhodia ja. lu.

17. The throwing of goods overboard, for lightening a ship in a storm, creates an obligation, whereby the owners of the ship and goods saved are obliged to contribute for the relief of those whose goods were thrown overboard, that so all may bear a proportional loss of the goods ejected for the common safety. In this contribution, the ship's provisions suffer no estimation. A master who has cut his mast, or parted with his anchor, to save the ship, is entitled to this relief: but if he has lost them by the storm, the loss falls only on the ship and freight. If the ejection does not save the ship, the goods preserved from shipwreck are not liable in contribution. Ejection may be lawfully made, if the master and a third part of the mariners judge that measure necessary, though the owner of the goods should oppose it: and the goods ejected are to be valued at the price that goods of the same sort which are saved shall be afterwards sold for.

accessory obligations.

18. There are certain obligations which cannot subsist by themselves, but are *accessions* to, or make a part of, other obligations. Of this sort are *fidejussio*, and the obligation to pay interest. *Cautionry*, or *fidejussio*, is that obligation by which one becomes engaged as security for another, that he shall either pay a sum, or perform a deed.

cautionry.

19. A cautioner for a sum of money may be bound, either simply as cautioner for the principal debtor, or conjunctly and severally for and with the principal debtor. The first has, by our customs, the *beneficium ordinis*, or of discussion; by which the creditor is obliged to discuss the proper debtor, before he can in-

sist for payment against the cautioner. Where one is bound as full debtor with and for the principal, or conjunctly and severally with him, the two obligants are bound equally in the same obligation, each *in solidum*; and consequently, the cautioner, though he is but an accessory, may be sued for the whole, without either discussing or even citing the principal debtor. Cautioners for performance of facts by another, or for the faithful discharge of an office (e. g. for factors, tutors, &c.), cannot by the nature of their engagement be bound conjunctly and severally with the principal obligant, because the fact to which the principal is bound cannot possibly be performed by any other. In such engagements, therefore, the failure must be previously constituted against the proper debtor, before action can be brought against the cautioner for making up the loss of the party suffering.

20. The cautioner, who binds himself at the desire of the principal debtor, has an *actio mandati* or of relief against him, for recovering the principal and interest paid by himself to the creditor, and for necessary damages: which action lies *de jure*, though the creditor should not assign to him on payment. As relief against the debtor is implied in fidejussory obligations, the cautioner, where such relief is cut off, is no longer bound: hence the defence of prescription frees the cautioner, as well as the principal debtor.

21. But (1.) Where the cautionry is interposed to an obligation merely natural, the relief is restricted to the sums that have really turned to the debtor's profit. (2.) A cautioner who pays without citing the debtor, loses his relief, in so far as the debtor had a relevant defence against the debt, in whole or in part. Relief is not competent to the cautioner, till he either pays the debt, or is distressed for it; except, 1st, Where the debtor is expressly bound to deliver to the cautioner his obligation cancelled, against a day certain, and has failed; or, 2dly, Where the debtor is *vergens ad inopiam*; in which case the cautioner may, by proper diligence, secure the debtor's funds for his own relief, even before payment or distress.

22. A right of relief is competent *de jure* to the cautioner who pays, against his co-cautioners, unless where the cautioner appears to have renounced it. In consequence of this implied relief, a creditor, if he shall grant a discharge to any one of the cautioners, must, in demanding the debt from the others, deduct that part as to which he has cut off their relief by that discharge. Where the principal debtor, in a bond in which a cautioner is bound, grants bond of corroboration with a new cautioner, both cautioners, as they intervene for the same debt, and at the desire of the same debtor, have a mutual relief against each other; but where the cautioner in the first bond signs as a principal obligant in the corroboration, the cautioner in the new bond, it would seem, would be entitled to a total relief against the first cautioner. At same time, the decisions of the court of session are not perfectly at one upon this branch of the doctrine of cautionry.

23. Cautionry is also *judicial*, as in a suspension. It is sufficient to loose the cautioner, that when he became cautioner, the suspender had good reason to suspend, e. g. if the charger had at that period no title, or had not then performed his part, though these grounds of sus-

pension

Law of
Scotland.

pension should be afterwards taken off. In all maritime causes, where the parties are frequently foreigners, the defender must give caution *judicio fisci et judicatum solvi*: such cautioner gets free by the death of the defender before sentence; but he continues bound, though the cause should be carried from the admiral to the court of session. This sort of caution is only to be exacted in causes strictly maritime.

24. It happens frequently, that a creditor takes two or more obligants bound to him, all as principal debtors, without sifejussion. Where they are so bound, for the performance of facts that are in themselves indivisible, they are liable each for the whole or *singuli in solidum*. But, if the obligation be for a sum of money, they are only liable *pro rata*; unless, (1.) Where they are in express words bound conjunctly and severally; or, (2.) In the case of bills or promissory notes. One of several obligants of this sort, who pays the whole debt, or fulfils the obligation, is entitled to a proportional relief against the rest; in such manner, that the loss must, in every case, fall equally upon all the solvent obligants.

Interest of
money.

25. Obligations for sums of money are frequently accompanied with an obligation for the annual rent or interest thereof. *Interest (usura)* is the profit due by the debtor, of a sum of money to the creditor for the use of it. The canon law considered the taking of interest as unlawful: the law of Moses allowed it to be exacted from strangers; and all the reformed nations of Europe have found it necessary, after the example of the Romans, to authorize it at certain rates fixed by statute. Soon after the Reformation, our legal interest was fixed at the rate of 10 per cent. per annum; from which time it had been gradually reduced, till at last, by 12 Ann. stat. 2. c. 16. it was brought to five per cent. and has continued at that rate ever since.

26. Interest is due, either *by law* or *by paction*. It is due *by law*, either *from the force of statute*, under which may be included acts of sederunt, or *from the nature of the transaction*. Bills of exchange, and inland bills, though they should not be protested, carry interest from their date in case of not acceptance; or from the day of their falling due, in case of acceptance and not payment. Where a bill is accepted, which bears no term of payment, or which is payable on demand, no interest is due till demand be made of the sum, the legal voucher of which is a notorial protest. Interest is due by a debtor after denunciation, for all the sums contained in the diligence, even for that part which is made up of interest. Sums paid by cautioners on distress carry interest, not only as to the principal sum in the obligation, but as to the interest paid by the cautioner. Factors named by the court of session are liable for interest, by a special act of sederunt; see N^o clxxii. 11.

27. It arises *ex lege*, or from the nature of the transaction, that a purchaser in a sale is liable in interest for the price of the lands bought from the term of his entry, though the price should be arrested in his hands, or though the seller should not be able to deliver to him a sufficient progress or title to the lands; for no purchaser can in equity enjoy the fruits of the lands, while at the same time he retains the interest of the price; but lawful consignation of the

price made by a purchaser, upon the refusal of the person's having right to receive it, stops the currency of interest. Where one intermeddles with money belonging to another which carries interest, he ought to restore it *cum omni obventionem et causa*; and is therefore liable in the interest of it, as being truly an accessory of the subject itself. It is also from the nature of the transaction, that interest is in certain cases allowed to merchants or others in name of damages.

28. Interest is due *by express paction*, where there is a clause in a bond or obligation, by which money is made to carry interest. An obligation is not lawful, where it is agreed on, that the yearly interest of the sum lent, if it should not be paid punctually as it falls due, shall be accumulated into a principal sum bearing interest; but an obligation may be lawfully granted, not only for the sum truly lent, but for the interest to the day at which the obligation is made payable, whereby the intermediate interest is accumulated into a principal sum from the term of payment. Interest may be also due by *implied paction*: Thus where the interest upon a debt is by a letter promised for time past, such promise implies a paction for interest as long as the debt remains unpaid; thus also the use of payment of interest presumes a paction, and when interest is expressed for one term, it is presumed to be bargained for till payment.

29. The subject matter of all obligations consists either of *things* or of *facts*. Things exempted from commerce cannot be the subject of obligation. (See N^o clxii. 2.) One cannot be obliged to the performance of a fact naturally impossible; nor of a fact in itself immoral, for that is also in the judgement of law impossible. Since impossible obligations are null, no penalty or damage can be incurred for non-performance; but it is otherwise, if the fact be in itself possible, though not in the debtor's power; in which case the rule obtains, *locum facti impræstabilis subit damnatum et interesse*.

30. An obligation, to which a condition is objected, either naturally or morally impossible, is in the general case null; for the parties are presumed not to have been serious. But such obligation is valid, and the condition thereof held *pro non scripta*, (1.) In testaments; (2.) In obligations, to the performance of which the granter lies under a natural tie, as in bonds of provision to a child. Where an obligation is granted under a condition, lawful but unfavourable, e. g. that the creditor shall not marry without the consent of certain friends, no more weight is given to the condition than the judge thinks reasonable. A condition, which is in some degree in the power of the creditor himself, is held as fulfilled, if he has done all he could to fulfil it. Implement or performance cannot be demanded in a mutual contract, by that party who himself declines or cannot fulfil the counterpart.

31. *Donation*, so long as the subject is not delivered to the donee, may be justly ranked among obligations; and it is that obligation which arises from the mere good will and liberality of the granter. Donations imply no warrandice, but from the future facts of the donor. They are hardly revocable by our law for ingratitude, though it should be of the grossest kind: those betwixt man and wife are revocable by the

Law of
Scotland.General
properties
of obligation.

Donation.

Law of Scotland.

Law of Scotland.

the donor, even after the death of the donee; but remuneratory grants, not being truly donations, cannot be so revoked. That special sort of donation, which is constituted verbally, is called a *promise*. The Roman law entitled all donors to the *beneficium competentie*, in virtue of which they might retain such part of the donation as was necessary for their own subsistence. Our law allows this benefit to fathers, with respect to the provisions granted to their children; and to grandfathers, which is a natural consequence of children's obligation to aliment their indigent parents; but to no collateral relation, not even to brothers.

32. Donations made in contemplation of death, or *mortis causa*, are of the nature of legacies, and like them revocable: consequently, not being effectual in the grantor's life, they cannot compete with any of his creditors; not even with those whose debts were contracted after the donation. They are understood to be given from a personal regard to the donee, and therefore fall by his predecease. No deed, after delivery, is to be presumed a *donatio mortis causa*; for revocation is excluded by delivery.

33. Deeds are not presumed, *in dubio*, to be donations. Hence, a deed by a debtor to his creditor, if donation be not expressed, is presumed to be granted in security or satisfaction of the debt; but bonds of provision to children are, from the presumption of paternal affection, construed to be intended as an additional patrimony; yet a tocher, given to a daughter in her marriage contract, is presumed to be in satisfaction of all former bonds and debts; because marriage contracts usually contain the whole provisions in favour of the bride. One who alimments a person that is come of age, without an express paction for board, is presumed to have entertained him as a friend, unless in the case of those who earn their living by the entertainment or board of strangers. But alimony given to minors, who cannot bargain for themselves, is not accounted a donation; except either where it is presumed from the near relation of the person alimmenting, that it was given *ex pietate*; or where the minor had a father or curators, with whom a bargain might have been made.

SECT. XVI. *Of the Dissolution or Extinction of Obligations.*

clxxvi.
Extinction
of obligations
as, performance.

1. Obligations may be dissolved by *performance*, or *implement*, *consent*, *compensation*, *novation*, and *confusion*. (1.) By *specific performance*: thus, an obligation for a sum of money is extinguished by payment. The creditor is not obliged to accept of payment by parts, unless where the sum is payable by different divisions. If a debtor in two or more separate bonds to the same creditor, made an indefinite payment, without ascribing it at the time to any one of the obligations, the payment is applied, 1st, To interest, or to sums not bearing interest. 2^{dly}, To the sums that are least secured, if the debtor thereby incurs no rigorous penalty. But, 3^{dly}, If this application be penal on the debtor, e. g. by suffering the legal of an adjudication to expire, the payment will be applied so as to save the debtor from that forfeiture. Where one of the debts is secured by a cautioner, the other not, the appli-

cation is to be so made, *ceteris paribus*, that both creditor and cautioner may have equal justice done to them.

2. Payment made by the debtor upon a mistake in fact, to one whom he believed, upon probable grounds, to have the right of receiving payment, extinguishes the obligation. But payment made to one, to whom the law denies the power of receiving it, has not this effect; as if a debtor, seized by letters of caption, should make payment to the messenger; for *ignorantia juris neminem excusat*. In all debts, the debtor, if he be not interpellated, may safely pay before the term, except in tack duties or feu duties; the payment whereof, before the terms at which they are made payable, is construed to be collusive, in a question with a creditor of the landlord or superior. Payment is *in dubio* presumed, by the voucher of the debt being in the hands of the debtor; *chirographum, apud debitorem repertum, presumitur solutum*.

3. Obligations are extinguishable by the *consent* of the creditor, who, without full implement, or even any implement, may renounce the right constituted in his own favour. Though a discharge or acquittance granted by one whom the debtor *bona fide* took for the creditor, but who was not, extinguishes the obligation, if the satisfaction made by the debtor was real; yet where it is imaginary, the discharge will not screen him from paying to the true creditor the debt for which he had made no prior satisfaction. In all debts which are constituted by writing, the extinction, whether it be by specific performance or bare consent, must be proved, either by the oath of the creditor, or by a discharge in writing; and the same solemnities which law requires in the obligation, are necessary in the discharge: but, where payment is made, not by the debtor himself, but by the creditor's intromission with the rents of the debtor's estate, or by delivery to him of goods in name of the debtor, such delivery or intromission, being *facti*, may be proved by witnesses, though the debt should have been not only constituted by writing, but made real on the debtor's lands by adjudication.

4. A discharge, though it should be general, of all that the grantor can demand, extends not to debts of an uncommon kind, which are not presumed to have been under the grantor's eye. This doctrine applies also to general assignations. In annual payments, as of rents, feu-duties, interest, &c. three consecutive discharges by the creditor, of the yearly or termly duties, presume the payment of all precedings. Two discharges by the ancestor, and the third by the heir, do not infer this presumption, if the heir was ignorant of the ancestor's discharges. And discharges by an administrator, as a factor, tutor, &c. presume only the payment of all preceding duties incurred during his administration. This presumption arises from repeating the discharges thrice successively; and so does not hold in the case of two discharges, though they should include the duties of three or more terms.

5. Where the same person is both creditor and debtor to another, the mutual obligations, if they are for equal sums, are extinguished by *compensation*; if for unequal, still the lesser obligation is extinguished, and the greater diminished, as far as the course of debit and credit goes. To found compensation,

By competent.

tion,

L. w of
Scotland.

tion, (1.) Each of the parties must be debtor and creditor at the same time. (2.) Each of them must be debtor and creditor in his own right. (3.) The mutual debts must be of the same quality: hence, a sum of money cannot be compensated with a quantity of corns; because, till the prices are fixed, at which the corns are to be converted into money, the two debts are incommensurable. Lastly, Compensation cannot be admitted, where the mutual debts are not clearly ascertained, either by a written obligation, the sentence of a judge, or the oath of the party. Where this requires but a short discussion, sentence for the pursuer is delayed for some time, *ex æquitate*, that the defender may make good his ground of compensation. Where a debt for fungibles is ascertained in money by the sentence of a judge, the compensation can have no effect farther back than the liquidation; because, before sentence, the debts were incommensurable: but, where a debt for a sum of money is, in the course of a suit, constituted by the oath of the debtor, the compensation, after it is admitted by the judge, operates *retro*, in so far as concerns the currency of interest, to the time when, by the parties acknowledgement, the debt became due: for, in this case, the debtor's oath is not what creates the debt, or makes it liquid: it only declares that such a liquid sum was truly due before. Compensation cannot be offered after decree, either by way of suspension or reduction; unless it has been formerly pleaded, and unjustly repelled. Decrees in absence are excepted.

By retention.

6. The right of *retention*, which bears a near resemblance to compensation, is chiefly competent, where the mutual debts, not being liquid, cannot be the ground of compensation; and it is sometimes admitted *ex æquitate* in liquid debts, where compensation is excluded by statute: thus, though compensation cannot be pleaded after decree, either against a creditor or his assignee; yet, if the original creditor should become bankrupt, the debtor, even after decree, may retain against the assignee, till he gives security for satisfying the debtor's claim against the cedent. This right is frequently founded in the expence disbursed on work employed on the subject retained, and so arises from the mutual obligations incumbent on the parties. It has never been disputed that retention of goods was competent, until payment or satisfaction of the debt incurred in relation to these goods; but it was found, by the court of session, in a case which was very lately before them, that goods could not be retained by a manufacturer until payment of a prior debt; the debt incurred upon the goods in his hands being offered; and although the debtor had become bankrupt, and the manufacturer must otherwise rank as a common creditor for his prior debt. But retention may be sustained, though the debt due to him who claims it does not arise from the nature of the obligation by which he is debtor: thus, a factor on a land estate may retain the sums levied by him in consequence of his factory, not only till he be paid of the disbursements made on occasion of such estate, but also till he be discharged from the separate engagements he may have entered into on his constituent's account.

By novation.

7. Obligations are dissolved by *novation*, whereby one obligation is changed into another, without chan-

ging either the debtor or creditor. The first obligation being thereby extinguished, the cautioners in it are loosed, and all its consequences discharged; so that the debtor remains bound only by the last. As the creditor to whom a right is once constituted, ought not to lose it by implication, novation is not easily presumed, and the new obligation is construed to be merely corroborative of the old; but, where the second obligation expressly bears to be *in satisfaction* of the first, these words must necessarily be explained into novation. Where the creditor accepts of a new debtor, in place of the former who is discharged, this method of extinction is called *delegation*.

Law of
Scotland.

By delegation.

8. Obligations are extinguished *confusione*, where the debit and credit meet in the same person, either by succession or singular title, e. g. when the debtor succeeds to the creditor, or the creditor to the debtor, or a stranger to both; for one cannot be debtor to himself. If the succession, from which the *confusio* arises, happens afterwards to be divided, so as the debtor and creditor come again to be different persons; the *confusio* does not produce an extinction, but only a temporary suspension, of the debt.

By confusion.

SECT. XVII. Of Assignations.

1. Heritable rights, when they are clothed with investment, are transmitted by disposition, which is a writing containing procuratory of resignation and precept of seisin; but those which either require no seisin, or on which seisin has not actually followed, are transmissible by simple *assignation*. He who grants the assignation is called the *cedent*; and he who receives it, the *assignee* or *cessionary*: if the assignee conveys his right to a third person, the deed of conveyance is called a *translation*; and if he assigns it back to the cedent, a *retrocession*. Certain rights are, from the uses to which they are destined, incapable of transmission, as alimentary rights: others cannot be assigned by the person invested in them, without special powers given to him; as tacks, reversions: the transmission of a third sort, is not presumed to be intended, without an express conveyance; as of paraphernal goods, which are so proper to the wife, that a general assignation, by her to her husband, of all that did or should belong to her at her decease, does not comprehend them. A life rent right is, by its nature, incapable of a proper transmission; but its profits may be assigned while it subsists.

clxxvii.
Assignations.

2. Assignations must not only be delivered to the assignee, but intimated by him to the debtor. Intimations are considered as so necessary for completing the conveyance, that in a competition between two assignations, the last, if first intimated, is preferred.

Intimation
of assignations.

3. Though, regularly, intimation to the debtor is made by an instrument, taken in the hands of a notary, by the assignee or his procurator; yet the law admits equipollencies, where the notice of the assignment given to the debtor is equally strong. Thus, a charge upon letters of horning at the assignee's instance, or a suit brought by him against the debtor, supplies the want of intimation; these being judicial acts, which expose the conveyance to the eyes both of the judge and of the debtor; or the debtor's promise of payment by writing to the assignee, because that is in effect a corroborating

What not
fication is
equivalent
to intima-
tion.

Law of Scotland.

roboring of the original debt. The assignee's possession of the right, by entering into payment of the rents or interest, is also equal to an intimation; for it imports, not only notice to the debtor, but his actual compliance: but the debtor's private knowledge of the assignment is not sustained as intimation.

what fees not necessary.

4. Certain conveyances need no intimation. (1.) Indorsements of bills of exchange; for these are not to be fettered with forms, introduced by the laws of particular states. (2.) Bank notes are fully conveyed by the bare delivery of them; for as they are payable to the bearer, their property must pass with their possession. (3.) Adjudication, which is a judicial conveyance, and marriage, which is a legal one, carry the full right of the subjects thereby conveyed, without intimation: nevertheless, as there is nothing in these conveyances which can of themselves put the debtor *in mala fide*, he is therefore *in tuto* to pay to the wife, or to the original creditor in the debt adjudged, till the marriage or adjudication be notified to him. Assignments of moveable subjects, though they be intimated, if they are made *retenta possessione*, (the cedent retaining the possession), cannot hurt the cedent's creditors; for such rights are presumed, in all questions with creditors, to be collusive, and granted in trust for the cedent himself.

effects of signation.

5. An assignation carries to the assignee the whole right of the subject conveyed, as it was in the cedent; and consequently he may use diligence, either in his cedent's name while he is alive, or in his own.

6. After an assignation is intimated, the debtor cannot prove a payment, or compensation, by the oath of the cedent, who has no longer any interest in the debt; unless the matter has been made litigious by an action commenced prior to the intimation: but the debtor may refer to the oath of the assignee, who is in the right of the debt, that the assignment was gratuitous, or in trust for the cedent: either of which being proved, the oath of the cedent will affect the assignee. If the assignation be in part onerous, and in part gratuitous, the cedent's oath is good against the assignee, only in so far as his right is gratuitous. All defences competent against the original creditor in a moveable debt, which can be proved otherwise than by his oath, continue relevant against even an onerous assignee; whose right can be no better than that of his author, and must therefore remain affected with all the burdens which attended it in the author's person.

SECT. XVIII. Of Arrestments and POUNDINGS.

clxxviii. arrestment.

1. The diligences, whereby a creditor may affect his debtor's moveable subjects, are *arrestment* and *pounding*. By *arrestment* is sometimes meant the securing of a criminal's person till trial; but as it is understood in the rubric of this title, it is the order of a judge, by which he who is debtor in a moveable obligation to the arrester's debtor, is prohibited to make payment or delivery till the debt due to the arrester be paid or secured. The arrester's debtor is usually called the common debtor; because, where there are two or more competing creditors, he is debtor to all of them. The person in whose hands the diligence is used is styled the arrestee.

2. Arrestment may be laid on by the authority either

of the supreme court, or of an inferior judge. In the first case, it proceeds either upon special letters of arrestment, or on a warrant contained in letters of horning; and it must be executed by a messenger. The warrants granted by inferior judges are called precepts of arrestment, and they are executed by the officer proper to the court. Where the debtor to the common debtor is a pupil, arrestment is properly used in the hands of the tutor, as the pupil's administrator: this doctrine may perhaps extend to other general administrators, as commissioner, &c. But arrestment, used in the hands of a factor or steward, cannot found an action of forthcoming without calling the constituent. Where the debtor to the common debtor is a corporation, arrestment must be used in the hands of the directors or treasurer, who represent the whole body. Arrestment, when it is used in the hands of the debtor himself, is inept; for that diligence is intended only as a restraint upon third parties.

3. All debts in which one is personally bound, though they should be heritably secured, are grounds upon which the creditor may arrest the moveable estate belonging to his debtor. Arrestment may proceed on a debt, the term of payment whereof is not yet come, in case the debtor be *vergens ad inopiam*. If a debt be not yet constituted by decree or registration, the creditor may arise and execute a summons against his debtor for payment, on which pending action arrestment may be used, in the same manner as inhibition, which is called *arrestment upon a dependence*. If one's ground of credit be for the performance of a fact, or if his depending process be merely declaratory, without a conclusion of payment or delivery, such claims are not admitted to be sufficient grounds for arrestment.

4. Moveable debts are the proper subject of arrestment; under which are comprehended conditional debts, and even depending claims. For lessening the expence of diligence to creditors, all bonds which have not been made properly heritable by seisin are declared arrestable: but this does not extend to adjudications, wadsets, or other personal rights of lands, which are not properly debts. Certain moveable debts are not arrestable. (1.) Debts due by bill, which pass from hand to hand as bags of money. (2.) Future debts; for though inhibition extends to *adquirenda* as well as *adquisita*, yet arrestment is limited, by its warrant, to the debt due at the time of serving it against the arrestee. Hence, an arrestment of rents or interest carries only those that have already either fallen due or at least become current. Claims, depending on the issue of a suit, are not considered as future debts; for the sentence, when pronounced, has a retrospect to the period at which the claim was first founded. The like doctrine holds in conditional debts. (3.) Alimentary debts are not arrestable; for these are granted on personal considerations, and so are not communicable to creditors: but the paid interest due upon such debt may be arrested by the person who has furnished the alimony. One cannot secure his own effects to himself for his maintenance, so as they shall not be affectable by his creditors. Salaries annexed to offices granted by the king, and particularly those granted to the judges of the session, and the fees of servants, are considered as alimentary funds; but the surplus fee, over

What debts arrestable.

Law of
Scotland.

and above what is necessary for the servant's personal uses, may be arrested. It has also been found, that a wadset for a consignee after an order of redemption used, but before decreet of declarator, is not arrestable.

Effect of
breach of
arrestment.

5. If, in contempt of the arrestment, the arrestee shall make payment of the sum, or deliver the goods arrested, to the common debtor, he is not only liable criminally for breach of arrestment, but he must pay the debt again to the arrester. As the law formerly stood, an arrestment used at the market cross of Edinburgh, pier and shore of Leith, against a person furth of the kingdom, was good; so that if the arrestee made payment to his creditor after the date of the arrestment, he was found liable in second payment to the arrester, because he had done all in his power to notify his diligence. This, however, is very properly altered by § 3. of the act of the 23d Geo. III. which declares that an arrestment used at the market cross of Edinburgh, pier and shore of Leith, in the hands of any person out of the kingdom, without other sufficient notification, shall not interpel the arrestee from paying *bona fide* to the original creditor. Arrestment is not merely prohibitory, as inhibitions are; but is a step of diligence which founds the user in a subsequent action whereby the property of the subject arrested may be adjudged to him. It therefore does not, by our latter practice, fall by the death of the arrestee; but continues to subsist, as a foundation for an action of forthcoming against his heir, while the subject arrested remains *in medio*. Far less is arrestment lost, either by the death of the arrester, or of the common debtor.

Loosing of
arrestment.

6. Where arrestment proceeds on a depending action, it may be loosed by the common debtor's giving security to the arrester for his debt in the event it shall be found due. Arrestment founded on decrees, or on registered obligations, which in the judgement of law are decrees, cannot be loosed but upon payment or consignation; except, (1.) Where the term of payment of the debt is not yet come, or the condition has not yet existed. (2.) Where the arrestment has proceeded on a registered contract, in which the debts or mutual obligations are not liquid. (3.) Where the decree is suspended, or turned into a libel; for, till the suspension be discussed, or the pending action concluded, it cannot be known whether any debt be truly due. A loosing takes off the *nexus* which had been laid on the subject arrested; so that the arrestee may thereafter pay safely to his creditor, and the cautioner is substituted in place of the arrestment, for the arrester's security: yet the arrester may, while the subject continues with the arrestee, pursue him in a forthcoming, notwithstanding the loosing.

Forthcoming
on arrestment.

7. Arrestment is only an inchoated or begun diligence; to perfect it, there must be an action brought by the arrester against the arrestee, to make the debt or subject arrested forthcoming. In this action, the common debtor must be called for his interest, that he may have an opportunity of excepting to the lawfulness or extent of the debt on which the diligence proceeded. Before a forthcoming can be pursued, the debt due by the common debtor to the arrester must be liquidated; for the arrester can be no further entitled to the subject arrested than to the extent of the debt due to him by the common debtor. Where the sub-

ject arrested is a sum of money, it is, by the decree of forthcoming, directed to be paid to the pursuer towards satisfying his debt; where goods are arrested, the judge ordains them to be exposed to sale, and the price to be delivered to the pursuer. So that, in either case, decrees of forthcoming are judicial assignations to the arrester of the subject arrested.

Law of
Scotland.

8. In all competitions, regard is had to the dates, not of the grounds of debt, but of the diligences proceeding upon them. In the competition of arrestments, the preference is governed by their dates, according to the priority even of hours, where it appears with any certainty which is the first. But, as arrestment is but a begun diligence, therefore if a prior arrester shall neglect to insist in an action of forthcoming for such a time as may be reasonably construed into a desertion of his begun diligence, he loses his preference. But, as dereliction of diligence is not easily presumed, the distance of above two years, between the first arrestment and the decree of forthcoming, was found not to make such a *mora* as to entitle the posterior arrester to a preference. This rule of preference, according to the dates of the several arrestments, holds, by our present practice, whether they have proceeded on a decree or on a dependence; on debts not yet payable, or on debts already payable; provided the pendency shall have been closed, or the debt have become payable, before the issue of the competition.

Preference
in arrestments.

By act 23d Geo. III. § 2. it is enacted, that when a debtor is made bankrupt, in terms of the act 1696, as thereby extended (clxxxiii. 13.), all arrestments which shall have been used for attacking any personal effects of such bankrupt within thirty days prior to the bankruptcy, or within four calendar months immediately subsequent, shall be *pari passu* preferable: and in order to save as far as possible the expence of a multiplicity of arrestments, it is declared, that where the effects of a debtor are arrested by any creditor within thirty days before the bankruptcy, or within four months after it, and a process of forthcoming or multiplepointing is brought in which such arrestment is founded on, it shall be competent for any other creditor producing his interest, and making his claim in the said process, at any time before the expiration of the said four months, to be ranked in the same manner as if he had used the form of arrestment; the expence of raising the process, and of the diligence at the instance of the creditor who raises it, being always paid out of the common fund. We here again repeat, that the enactments of this statute are only temporary, and not yet a permanent part of the law of Scotland, whatever they may become when the subject is resumed by the legislature upon the expiry of the act.

9. In the competition of arrestments with assignations, an assignation by the common debtor, intimated before arrestment, is preferable to the arrestment. If the assignation is granted before arrestment, but not intimated till after it, the arrester is preferred.

10. **POINTING** is that diligence affecting moveable subjects, by which their property is carried directly to the creditor. No pointing can proceed, till a charge be given to the debtor to pay or perform, and the days thereof be expired, except pointings against vassals for their feu-duties, and pointings against tenants for rent, proceeding upon the landlord's own decree; in which

the

Law of Scotland.

Law of Scotland.

the ancient custom of pointing without a previous charge continues. A debtor's goods may be pointed by one creditor, though they have been arrested before by another; for arrestment being but an imperfect diligence, leaves the right of the subject still in the debtor, and so cannot hinder any creditor from using a more perfect diligence, which has the effect of carrying the property directly to himself.

11. No cattle pertaining to the plough, nor instruments of tillage, can be pointed in the time of labouring or tilling the ground, unless where the debtor has no other goods. By labouring time is understood, that time, in which that tenant, whose goods are to be pointed, is ploughing, though he should have been earlier or later than his neighbours; but summer fallowing does not fall under this rule.

12. In the execution of pointing, the debtor's goods must be appraised, first, on the ground of the lands where they are laid hold on, and a second time at the market cross of the jurisdiction, by the stated appraisers thereof; or, if there be none, by persons named by the messenger or other officer employed in the diligence. Next, the messenger must, after public intimation by three oyessees, declare the value of the goods according to the second appraisement, and require the debtor to make payment of the debt, including interest and expenses. If payment shall be offered to the creditor, or in his absence to his lawful attorney; or if, in case of refusal by them, consignation of the debt shall be made in the hands of the judge ordinary or his clerk, the goods must be left with the debtor; if not, the messenger ought to adjudge and deliver them over, at the appraised value, to the user of the diligence towards his payment: and the debtor is entitled to a copy of the warrant and executions, as a voucher that the debt is discharged in whole or in part by the goods pointed.

13. Ministers may point for their stipends, upon one appraisement on the ground of the lands, and landlords were always in use to point so, for their rents. Appraisement of the goods at the market cross of the next royal borough, or even of the next head borough of stewartry or regality, though these jurisdictions be abolished, is declared as sufficient as if they were carried to the head borough of the shire. Pointing, whether it be considered as a sentence, or as the execution of a sentence, must be proceeded in between sun-rising and sun-setting; or at least it must be finished before the going off of day-light.—The powers of the officer employed in the execution of pointings are not clearly defined by custom, in the case of a third party claiming the property of the goods to be pointed. This is certain, that he may take the oath of the claimant, upon the verity of his claim; and if from thence it shall appear that the claimant's title is collusive, he ought to proceed in the diligence; but if there remains the least doubt, his safest course is to deliver the goods to the claimant, and to express in his execution the reasons why pointing did not proceed.

14. Any person who stops a pointing *via facti*, on groundless pretences, is liable, both criminally, in the pains of deforcement (see N^o clxxxvi. 15.), and civilly, in the value of the goods which might have been pointed by the creditor.

By the foresaid statute 23 Geo. III. § 4. it is declared, that after a person is rendered bankrupt, as

thereby directed, no pointing of the moveables belonging to such bankrupt, within 30 days before his bankruptcy, or within four kalender months thereafter, shall give a preference to such pointer over the other lawful creditors of the bankrupt; but the goods so pointed shall be considered as *in medio*, and the person receiving the price of them shall be liable to make the same forthcoming, so as that all the other creditors of the bankrupt who are possessed of liquidate grounds of debt or decrees for payment, shall be entitled to their proportion of the same; provided they make their claim by summoning the pointer at any time before the expiration of the said four months, deducting always the expence of such pointing from the first end of the price of such goods, together with 20 *per cent.* on the appraised value, which the pointer shall retain to account of his debt in preference to the other creditors; reserving liberty to him to rank on the remaining sum for the full amount of the debt contained in his diligence. And it is by the said act further declared, that where any person concerned in trade or manufactures is bankrupt, as before-mentioned, it may be lawful for any creditor, to the amount of 100*l.* or any two creditors to the amount of 150*l.* or any three or more creditors to the amount of 200*l.* or upwards, to apply for sequestration of the estate real and personal belonging to the debtor; after awarding which, an interim factor, and then a trustee, shall be chosen by the creditors, who is to conduct the business of the sequestration, according to the various rules fixed and laid down by the statute. The act, however, expressly excludes all others, except those concerned in trade or manufactures, from the benefit of the sequestration; but it is probable, when it comes to be renewed or digested in another form, this part of it will suffer an alteration.

SECT. XIX. Of Prescription.

clxxix.

1. Prescription, which is a method, both of establishing and of extinguishing property, is either *positive* or *negative*. *Positive* prescription is generally defined, as the Roman *usucapio*. The acquisition of property (it should rather be, when applied to our law, the securing it against all further challenge) by the possessor's continuing his possession for the time which law has declared sufficient for that purpose: *negative*, is the loss or omission of a right, by neglecting to follow it forth, or use it, during the whole time limited by law. The doctrine of prescription, which is, by some writers, condemned as contrary to justice, has been introduced, that the claims of negligent creditors might not subsist forever, that property might be at last fixed, and forgeries discouraged, which the difficulty of detecting must have made exceeding frequent, if no length of time had limited the legal effect of writings.

2. Positive prescription was first introduced into our law by 1617, c. 12. which enacts, that whoever shall have possessed his lands, annualrents, or other heritages, peaceably in virtue of investments, for 40 years continually after their dates, shall not thereafter be disquieted in his right by any person pretending a better title. Under *heritages* are comprehended every right that is *fundo annexum*, and capable of continual possession.

Law of
Scotland.

sion. Continued possession, if proved as far back as the memory of man, presumes possession upwards to the date of the infeftment. The whole course of possession must by the act be founded on feifins; and consequently no part thereof on the bare right of appearance: but 40 years possession, without feifin, is sufficient in the prescription of such heritable rights as do not require feifin. The possession must also be without any *lawful* interruption, i. e. it must neither be interrupted *via facti*, nor *via juris*. The prescription of subjects not expressed in the infeftment as part and pertinent of another subject specially expressed, has been explained, N^o clxvii. 6.

3. The act requires, that the possessor produce, as his title of prescription, a charter of the lands preceding the 40 years possession, with the feifin following on it: and where there is no charter extant, feifins, one or more, standing together for 40 years, and proceeding either on retours or precepts of *clarè constat*. This has given rise to a reasonable distinction observed in practice, between the prescription of a singular successor, and of an heir. Singular successors must produce for their title of prescription, not only a feifin, but its warrant, as a charter, disposition, &c. either in their own person, or in that of their author: but the production, by an heir of feifins, one or more, standing together for 40 years, and proceeding on retours or precepts of *clarè constat*, is sufficient. The heir is not obliged to produce the retours or precepts on which his feifins proceed, nor is the singular successor obliged to produce the ground of his charter: so that if the title of prescription produced be a fair deed, and a sufficient title of property, the possessor is secure by the act, which admits no ground of challenge, but falsehood. A special statute, for establishing the positive prescription in moveable rights, was not necessary: for, since a title in writing is not requisite for the acquiring of these, the negative prescription, by which all right of action for recovering their property is cut off, effectually secures the possessor.

Negative
prescrip-
tion.

4. The negative prescription of obligations, by the lapse of 40 years, was introduced into our law long before the positive, (1469, c. 29.—1474, c. 55.) This prescription is now amplified by the foresaid act (1617), which has extended it to all actions competent upon heritable bonds, reversions, and others whatsoever; unless where the reversions are either incorporated in the body of the wadset-right, or registered in the register of reversions: And reversions so incorporated, or registered, are not only exempted from the negative prescription, but they are an effectual bar against any person from pleading the positive.

A shorter
negative
prescrip-
tion.

5. A shorter negative prescription is introduced by statute, in certain rights and debts. Actions of spuilzie, ejection, and others of that nature, must be pursued within three years after the commission of the fact on which the action is founded. As in spuilzies and ejections, the pursuer was entitled, *in odium* of violence, to a proof by his own oath *in litem*, and to the violent profits against the defender, the statute meant only to limit these special privileges by a three years prescription, without cutting off the right of action, where the claim is restricted to simple restitution. Under the general words, and others of that nature, are comprehended all

actions where the pursuer is admitted to prove his libel by his own oath *in litem*.

Law of
Scotland

6. Servants fees, house rents, men's ordinaries, (i. e. money due for board), and merchants accounts, fall under the triennial prescription, (by 1579, c. 83.) There is also a general clause subjoined to this statute, of *other the like debts*, which includes alimentary debts, wages due to workmen, and accounts due to writers, agents, or procurators. These debts may, by this act, be proved after the three years, either by the writing or oath of the debtor; so that they prescribe only as to the mean of proof by witnesses: but after the three years it behooves the creditor to refer to the debtor's oath, not only the constitution, but the subsistence of the debt. In the prescription of house rents, servants fees, and alimony, each term's rent, fee, or alimony, runs a separate course of prescription; so that in an action for these the claim will be restricted to the arrears incurred within the three years immediately before the citation: But, in accounts, prescription does not begin till the last article; for a single article cannot be called an account. Actions of removing must also be pursued within three years after the warning. Reductions of erroneous retours prescribe, if not pursued within 20 years.

Prescrip-
tion of ser-
vants fees,
&c.

7. Ministers stipends and multures prescribe in five years after they are due; and arrears of rent, five years after the tenant's removing from the lands. As the prescription of mails and duties was introduced in favour of poor tenants, that they might not suffer by neglecting to preserve their discharges, a proprietor of lands subject to a liferent, who had obtained a lease of all the liferented lands from the liferenter, is not entitled to plead it, nor a tacksmen of one's whole estate, who had by the lease a power of removing tenants. Bargains concerning moveables, or sums of money which are proveable by witnesses, prescribe in five years after the bargain. Under these are included sales, locations, and all other consensual contracts, to the constitution of which writing is not necessary. But all the above-mentioned debts, may, after the five years, be proved, either by the oath or the writing of the debtor; of which above, (par. 6.) A quinquennial prescription is established in arrestments, whether on decrees or depending actions: The first prescribe in five years after using the arrestment, and the last in five years after sentence is pronounced on the depending action.

Of mini-
sters sti-
pends, &c.

8. No person binding for or with another, either as cautioner or co-principal, in a bond or contract for a sum of money, continues bound after seven years from the date of the bond, provided he has either a clause of relief in the bond, or a separate bond of relief, intimated to the creditor, at his receiving the bond. But all diligence used within the seven years against the cautioner shall stand good. As this is a public law, intended to prevent the bad consequences of rash engagements, its benefit cannot, before the lapse of the seven years, be renounced by the cautioner: As it is correctory, it is strictly interpreted: Thus, bonds bearing a mutual clause of relief *pro rata*, fall not under it; nor bonds of corroboration, nor obligations, where the condition is not purified, or the term of payment not come within the seven years; because no diligence.

Limitation
of cautioner

Law of Scotland.

ligence can be used on these. The statute excludes all cautioneries for the faithful discharge of offices; these not being obligations in a bond or contract for sums of money. And practice has denied the benefit of it to all judicial cautioners, as cautioners in a suspension.—Actions of count and reckoning, competent either to minors against their tutors or curators, or *vice versa*, prescribe in ten years after the majority or death of the minor.

Prescription of holograph writings.

9. Holograph bonds, missive letters, and books of account, not attested by witnesses, prescribe in 20 years, unless the creditor shall thereafter prove the verity of the subscription by the debtor's oath. It is therefore sufficient to save from the effect of this prescription, that the constitution of the debt be proved by the party's oath after the 20 years; whereas, in stipends, merchants accounts, &c. not only the constitution, but the subsistence of the debt, must be proved by writing or the debtor's oath, after the term of prescription. Some lawyers extend this prescription of holograph writings to all obligations for sums not exceeding 100l. Scots, which are not attested by witnesses; because though these are in practice sustained, yet they ought not to have the same duration with deeds attested by witnesses. Though in the short prescriptions of debts, the right of action is for ever lost, if not exercised within the time limited: yet where action was brought on any of those debts, before the prescription was run, it subsisted, like any other right, for 40 years. As this defeated the purpose of the acts establishing these prescriptions, all processess upon warnings, spuilzies, ejections, or arrelements, or for payment of the debts contained in act 1669, c. 9. are by the said act joined with 1685, c. 14. declared to prescribe in five years, if not wakened within that time; see N^o clxxxiii. 26.

Function of obligations by cautioners.

10. Certain obligations are lost by the lapse of less than 40 years, without the aid of statute, where the nature of the obligation, and the circumstances of parties justify it: thus, bills which are not intended for lasting securities, produced no action, where the creditor had been long silent, unless the subsistence of the debt be proved by the debtor's oath; but the precise time was not fixed by practice. But the duration of bills is now limited to six years by the 12 Geo. III.; rendered perpetual by 23 Geo. III. Thus also, a receipt for bills granted by a writer to his employer, not insisted upon for 23 years, was found not productive of an action. The prescriptions of the restitution of minors, of the benefit of inventory, &c. are explained in their proper places.

bona fides in prescription.

11. In the positive prescription, as established by the act 1617, the continued possession for 40 years, proceeding upon a title of property not chargeable with falsehood, secures the possessor against all other grounds of challenge, and so presumes *bona fides, presumptione juris et de jure*. In the long negative prescription, *bona fides* in the debtor is not required: the creditor's neglecting to insist for so long a time, is construed as an abandoning of his debt, and so is equivalent to a discharge. Hence, though the subsistence of the debt should be referred to the debtor's own oath, after the 40 years, he is not liable.

12. Prescription runs *de momento in momentum*: the whole time defined by law must be completed, before

a right can be either acquired or lost by it; so that interruption, made on the last day of the 40th year, breaks its course. The positive prescription runs against the sovereign himself, even as to his annexed property; but it is generally thought he cannot suffer by the negative: he is secured against the negligence of his officers in the management of processess, by express statute, 1605, c. 14. The negative, as well as the positive prescription, runs against the church, though churchmen have but a temporary interest in their benefices. But because the rights of beneficiaries to their stipends are liable to accidents, through the frequent change of incumbents, 13 years possession does, by a rule of the Roman chancery which we have adopted, found a presumptive title in the beneficiary: but this is not properly prescription; for if by titles recovered, perhaps out of the incumbent's own hands, it shall appear that he has possessed titles or other subjects to a greater extent than he ought, his possession will be restricted accordingly. This right must not be confounded with that established in favour of churchmen, which is confined to church lands and rents, and constitutes a proper prescription upon a possession of 30 years.

Law of Scotland. Prescription, against whom it runs.

13. The clause in the act 1617, saving minors from prescription, is extended to the positive, as well as to the negative prescription; but the exception of minority is not admitted in the case of hospitals or children, where there is a continual succession of minors, that being a *casus insolitus*. Minors are expressly excepted in several of the short prescriptions, as 1579, c. 18.—1669, c. 9.; but where law leaves them in the common case, they must be subject to the common rules.

14. Prescription does not run *contra non valentem agere*, against one who is barred by some legal incapacity, from pursuing; for in such case, neither negligence nor dereliction can be imputed to him. This rule is, by a favourable interpretation, extended to wives, who *ex reverentia maritali* forbear to pursue actions competent to them against their husbands. On the same ground, prescription runs only from the time that the debt or right could be sued upon. Thus, inhibition prescribes only from the publishing of the deed granted to the inhibitor's prejudice; and in the prescription of removing, the years are computed only from the term at which the defender is warned to remove. Neither can prescription run against persons who are already in possession, and so can gain nothing by a pursuit. Thus, where a person, who has two adjudications affecting the same lands, is in possession upon one of them, prescription cannot run against the other during such possession.

15. Certain rights are incapable of prescription: Certain rights incapable of prescription. (1.) Things that law has exempted from commerce. (2.) *Res meræ facultatis*, e. g. a faculty to charge a subject with debts, to revoke, &c. cannot be lost by prescription; for faculties may, by their nature, be exercised at any time: hence, a proprietor's right of using any act of property on his own grounds cannot be lost by the greatest length of time. (3.) Exceptions competent to a person for eliding an action, cannot prescribe, unless the exception is founded on a right productive of an action, e. g. compensation; such right must be insisted on within the years of prescription. (4.) Obl-

Law of
Scotland.

(4.) Obligations of yearly pensions or payments, though no demand has been made on them for 40 years, do not suffer a total prescription, but still subsist as to the arrears fallen due within that period; because prescription cannot run against an obligation till it be payable, and each year's pension or payment is considered as a separate debt.

16. No right can be lost *non utendo* by one, unless the effect of that prescription be to establish it in another. Hence the rule arises, *juri sanguinis nunquam præscribitur*. Hence also, a proprietor of land cannot lose his property by the negative prescription, unless he who objects it can himself plead the positive. On the same ground, a superior's right of feu duties cannot be lost *non utendo*; because, being inherent in the superiority, it is truly a right of lands that cannot suffer the negative prescription, except in favour of one who can plead the positive; which the vassal cannot do, being destitute of a title. This rule applies also to parsonage tithes, which are an inherent burden upon all lands not specially exempted; and from which therefore the person liable cannot prescribe an immunity by bare non-payment: but such vicarage tithes as are only due where they are established by usage, may be lost by prescription. In all these cases, though the radical right cannot suffer the negative prescription, the bygone duties, not demanded within the 40 years, are lost to the proprietor, superior, or titular.

Interrup-
tion of pre-
scription.

17. Prescription may be interrupted by any deed whereby the proprietor or creditor uses his right or ground of debt. In all interruptions, notice must be given to the possessor of the subject, or the debtor, that the proprietor or creditor intends to sue upon his right. All writings whereby the debtor himself acknowledges the debt, and all processes for payment brought, or diligences used against him upon his obligation by horning, inhibition, arrestment, &c. must be effectual to interrupt prescription.

18. Interruptions, by citation upon libelled summonses, where they are not used by a minor, prescribe, if not renewed every seven years: but where the appearance of parties, or any judicial act has followed thereupon, it is no longer a bare citation, but an action which subsists for 40 years. It has been found, that the sexennial prescription of bills is not interrupted by a blank citation, as practised in the court of admiralty. Citations for interrupting the prescription of real rights must be given by messengers; and the summonses, on which such citations proceed, must pass the signet upon the bill, and be registered within 60 days after the execution, in a particular register appointed for that purpose: and where interruption of real rights is made *via facti*, an instrument must be taken upon it, and recorded in the said register; otherwise it can have no effect against singular successors.

19. Interruption has the effect to cut off the course of prescription, so that the person prescribing can avail himself of no part of the former time, but must begin a new course, commencing from the date of the interruption. Minority, therefore, is no proper interruption: for it neither breaks the course of prescription, nor is it a document or evidence taken by the minor on his right: it is a personal privilege competent to him, by which the operation of the prescription is in-

deed suspended during the years of minority, which are therefore discounted from it; but it continues to run after majority, and the years before and after the minority may be conjoined to complete it. The same doctrine applies to the privilege arising from one's incapacity to act.

20. Diligence used upon a debt, against any one of two or more co-obligants, preserves the debt itself, and so interrupts prescription against all of them; except in the special case of cautioners, who are not affected by any diligence used against the principal debtor. In the same manner, a right of annualrent, constituted upon two separate tenements, is preserved as to both from the negative prescription, by diligence used against either of them. But whether such diligence has also the effect to hinder the possessor of the other tenement by singular titles from the benefit of the positive prescription, may be doubted.

III. OF SUCCESSION.

SECT. XX. *Of Succession in Heritable Rights.*

clxxx.

1. Singular successors are those who succeed to a person yet alive, in a special subject by singular titles; but succession, in its proper sense, is a method of transmitting rights from the dead to the living. Heritable rights descend by succession to the *heir* properly so called; moveable rights to the *executors*, who are sometimes said to be heirs in moveables. Succession is either by *special destination*, which descends to those named by the proprietor himself; or *legal*, which devolves upon the persons whom the law marks out for successors, from a presumption, that the proprietor would have named them had he made a destination. The first is in all cases preferred to the other, as presumption must yield to truth.

2. In the succession of heritage, the heirs at law are otherwise called heirs general, heirs whatsoever, or heirs of line; and they succeed by the right of blood, in the following order. First, Descendants; among these, sons are preferred to daughters, and the eldest son to all the younger. Where there are daughters only, they succeed equally, and are called heirs portioners. Failing immediate descendants, grandchildren succeed; and in default of them, great-grandchildren; and so on *in infinitum*; preferring, as in the former case, males to females, and the eldest male to the younger.

3. Next after descendants, collaterals succeed; among whom the brothers *german* of the deceased have the first place. But as, in no case, the legal succession of heritage is, by the law of Scotland, divided into parts, unless where it descends to females; the immediate younger-brother of the deceased excludes the rest, according to the rule, *heritage descends*. Where the deceased is himself the youngest, the succession goes to the immediate elder brother, as being the least deviation from this rule. If there are no brothers german, the sisters german succeed equally: then brothers *consanguinean*, in the same order as brothers german; and failing them, sisters *consanguinean* equally. Next, the father succeeds. After him, his brothers and sisters, according to the rules already explained; then the grandfather; failing him, his brothers and sisters; and

so

Law of Scotland. so upwards, as far back as propinquity can be proved. Though children succeed to their mother, a mother cannot to her child: nor is there any succession by our law through the mother of the deceased; inasmuch that one brother *uterine*, i. e. by the mother only, cannot succeed to another, even in that estate which flowed originally from their common mother.

Succession in capita. 4. In heritage there is a *right of representation*, by which one succeeds, not from any title in himself, but in the place, and as representing some of his deceased ascendants. Thus, where one leaves a younger son, and a grandchild by his eldest, the grandchild, though farther removed in degree from the deceased than his uncle, excludes him, as coming in place of his father the eldest son. Hence arises the distinction between succession *in capita*, where the division is made into as many equal parts as there are *capita* or heirs, which is the case of heirs portioners; and succession *in stirpes*, where the remoter heirs draw no more among them than the share belonging to their ascendants or *stirps*, whom they represent; an example of which may be figured in the case of one who leaves behind him a daughter alive, and two grand daughters by a daughter deceased. In which case the two grand daughters would succeed equally to that half which would have belonged to their mother had she been alive.

Succession heirs-portioners. 5. In the succession of heirs portioners, indivisible rights, e. g. titles of dignity, fall to the eldest sister. A single right of superiority goes also to the eldest; for it hardly admits a division, and the condition of the vassal ought not to be made worse by multiplying superiors upon him. Where there are more such rights, the eldest may perhaps have her election of the best; but the younger sisters are entitled to a recompense, in so far as the divisions are unequal; at least, where the superiorities yield a constant yearly rent. The principal seat of the family falls to the eldest, with the garden and orchard belonging to it, without recompense to the younger sisters; but all other houses are divided amongst them, together with the lands on which they are built, as parts and pertinents of these lands. A *præcipuum*, however, is due only in the case of succession of heirs portioners *ab intestato*; and therefore there is no place for it where the succession is taken under a deed.

or of conquest. 6. Those heritable rights, to which the deceased did himself succeed as heir to his father or other ancestor, get sometimes the name of heritage in a strict sense, in opposition to the *feuda nova*, or feus of conquest, which he had acquired by singular titles, and which descend not to his heir of line, but of conquest. This distinction obtains only where two or more brothers or uncles, or their issue, are next in succession; in which case, the immediate younger brother, as heir of line, succeeds to the proper heritage, because that descends; whereas the conquest ascends to the immediate elder brother. It has no place in female succession, which the law divides equally among the heirs portioners. Where the deceased was the younger brother, the immediate elder brother is heir both of line and of conquest. An estate disposed by a father to his eldest son, is not conquest in the son's person, but heritage; because the son would have succeeded to it, though there had been no disposition. The heir of conquest succeeds to all rights affecting land, which require seisin to perfect them. But

teinds go to the heir of line; because they are merely a burden on the fruits, not the land. Tacks do not fall under conquest, because they are complete rights without seisin; nor personal bonds taken to heirs excluding executors.

Law of Scotland.

7. The heir of line is entitled to the succession, not only of subjects properly heritable, but to that sort of moveables called *heirship*, which is the best of certain kinds. This doctrine has been probably introduced, that the heir might not have a house and estate to succeed to, quite dismantled by the executor. In that sort which goes by pairs or dozens, the best pair or dozen is the heirship. There is no heirship in fungibles, or things estimated by quantity; as grain, hay, current money, &c. To entitle an heir to this privilege, the deceased must have been either, (1.) A prelate: (2.) A baron, i. e. who stood inest at his death in lands, though not erected into a barony; or even in a right of annualrent: Or, (3.) A burgher; not an honorary one, but a trading burgher of a royal borough, or at least one entitled to enter burgher in the right of his ancestor. Neither the heir of conquest, nor of tailzie, has right to heirship moveables.

8. As to succession by destination, no proprietor can settle any heritable estate, in the proper form of a testament; not even bonds excluding executors, though these are not heritable *ex sua natura*: But, where a testament is in part drawn up in the style of a deed *inter vivos*, such part of it may contain a settlement of heritage, though executors should be named in the testamentary part. The common method of settling the succession of heritage is by disposition, contract of marriage, or simple procuratory of resignation: and, though a disposition settling heritage should have neither precept nor procuratory, it founds an action against the heir of line to complete his titles to the estate; and thereafter divest himself in favour of the disponee. The appellation of tailzie, or entail, is chiefly used in the case of a land estate, which is settled on a long series of heirs substituted one after another. The person first called in the tailzie is the institute; the rest, the heirs of tailzie, or the substitutes.

9. Tailzies, when considered in relation to their several degrees of force, are either, (1.) Simple destinations. (2.) Tailzies with prohibitory clauses. (3.) Tailzies with prohibitory, resolutive, and irritant clauses. That is a simple destination, where the persons called to the succession are substituted one after another, without any restraint laid on the exercise of their property. The heirs, therefore, succeeding to such estate, are absolute fiars, and consequently may alter the destination at pleasure.

10. In tailzies with clauses prohibitory, e. g. declaring that it shall not be lawful to the heirs to contract debts or alien the lands in prejudice of the succession, none of the heirs can alien gratuitously. But the members of entail may contract debts which will be effectual to the creditors, or may dispose of the estate for onerous causes. In both these sorts the maker himself may alter the tailzie: except, (1.) Where it has been granted for an onerous cause, as in mutual tailzies: or, (2.) Where the maker is expressly disabled, as well as the institute or the heirs.

11. Where a tailzie is guarded with irritant and resolutive clauses, the estate entailed cannot be carried off

by

Law of
Scotland.

by the debt, or deed, of any of the heirs succeeding thereto, in prejudice of the substitutes. It was long doubted, whether such tailzies ought to be effectual, even where the superior's consent was adhibited; because they sunk the property of estates, and created a perpetuity of liferents. They were first explicitly authorized by 1685, c. 22. By this statute, the entail must be registered in a special register established for that purpose; and the irritant and resolute clauses must be inserted, not only in the procuratories, precepts, and seigns, by which the tailzies are first constituted, but in all the after conveyances thereof; otherwise they can have no force against singular successors. But a tailzie, even without these requisites, is effectual against the heir of the granter, or against the institute who accepts of it. It has been found, that an entail, though completed by infestment before the act 1685, was ineffectual, because not recorded in terms of the act.

Their re-
quisites.

Heirs of
entail, their
powers and
restrictions.

12. An heir of entail has full power over the entailed estate, except in so far as he is expressly fettered; and as entails are an unfavourable restraint upon property, and a frequent snare to trading people, they are *strictissimi juris*; so that no prohibition or irritancies are to be inferred by implication. By 10 George III. c. 51. heirs of entail are entitled (notwithstanding any restrictions in the deed of entail) to improve their estates by granting leases, building farm houses, draining, enclosing, and excambing, under certain limitations, and to claim repayment of three-fourths of the expence from the next heir of entail.—This act extends to all tailzies, whether made prior or posterior to the 1685.

Contra-
vention, by
whom in-
ferred.

13. An heir, who counteracts the directions of the tailzie, by aliening any part of the estate, charging it with debt, &c. is said to contravene. It is not the simple contracting of debt that infers contravention; the lands entailed must be actually adjudged upon the debt contracted. An heir may, where he is not expressly barred, settle rational provisions on his wife and children, without incurring contravention. It is not quite clear whether the heirs also of the contravener would forfeit their right from the acts or deeds of their predecessor where there is no express clause in the entailed settling it; and though the words of the act 1685 (which declares, that entails executed according to the directions of it, shall be effectual not only against the contravener and his heirs, but against creditors), may seem to favour the idea that heirs also would forfeit, the more favourable opinion has received the sanction of our supreme court. For the greater security, however, a clause is now usually inserted in tailzies, declaring, that the contravention of the heir in possession shall not affect his descendants, when such is the intention of the granter.

In what
cases an
heir may
sell.

14. When the heirs of the last person specially called in a tailzie come to succeed, the irritancies have no longer any person in favour of whom they can operate, and consequently, the fee, which was before tailzied, becomes simple and unlimited in the person of such heirs. By the late act 20th George II. for abolishing wardholdings, the king may purchase lands within Scotland, notwithstanding the strictest entail; and where the lands are in the hands of minors or fatuous persons, his majesty may purchase them from the curators or guardians. And heirs of entail may sell to their vas-

sals the superiorities belonging to the entailed estate; but in all these cases, the price is to be settled in the same manner that the lands or superiorities sold were settled before the sale.

Law
Scotl.

15. Rights, not only of land estates, but of bonds, are sometimes granted to two or more persons in conjunct fee. Where a right is so granted to two strangers, without any special clause adjected to it, each of them has an equal interest in the fee, and the part of the deceased descends to his own heir. If the right be taken to the two jointly, and the *longest liver* and their heirs, the several shares of the conjunct fiars are affectable by their creditors during their lives; but, on the death of any one of them, the survivor has the fee of the whole, in so far as the share of the predeceased remains free, after payment of his debts. Where the right is taken to the two in conjunct fee, and to the heirs of one of them, he to whose heirs the right is taken is the only fiar; the right of the other resolves into a simple liferent: yet where a father takes a right to himself and his son jointly, and to the son's heirs, such right being gratuitous, is not understood to strip the father of the fee, unless a contrary intention shall plainly appear from the tenor of the right.

Rights
taken i
conjunct
fee.

16. Where a right is taken to a husband and wife, in conjunct fee and liferent, the husband, as the *persona dignior*, is the only fiar: the wife's right resolves into a liferent, unless it be presumable, from special circumstances, that the fee was intended to be in the wife. Where a right of moveables is taken to husband and wife, the heirs of both succeed equally, according to the natural meaning of the words.

17. Heirs of provision are those who succeed to any subject, in virtue of a provision in the investiture, or other deed of settlement. This appellation is given most commonly to heirs of a marriage. These are more favourably regarded than heirs by simple destination, who have only the hope of succession; for heirs of a marriage, because their provisions are constituted by an onerous contract, cannot be disappointed of them by any gratuitous deed of the father. Nevertheless, as their right is only a right of succession, which is not designed to restrain the father from granting onerous or rational deeds, he continues to have the full power of selling the subject, or charging it with debts, unless a proper right of credit be given to the heir by the marriage contract, e. g. if the father should oblige himself to infest the heir in the lands, or make payment of the sum provided against a day certain, or when the child attains a certain age, &c.; for such rights, when perfected by infestment, or secured by diligence, are effectual against all the posterior deeds of the father, even onerous.

Heirs of
provision.

18. Though all provisions to children, by a marriage contract conceived in the ordinary form, being merely rights of succession, are postponed to every onerous debt of the granter, even to those contracted posterior to the provisions; yet where a father executes a bond of provision to a child actually existing, whether such child be the heir of a marriage or not, a proper debt is thereby created, which, though it be without doubt gratuitous, is not only effectual against the father himself and his heirs, but is not reducible at the instance even of his prior onerous creditors, if he was solvent at the time of granting it. A father may, not-

Effects o
provision
children.

withstanding.

Law of
Scotland.

withstanding a first marriage contract, settle a jointure on a second wife, or provide the children of a second marriage; for such settlements are deemed onerous; but where they are exorbitant, they will be restricted to what is rational: and in all such settlements, where the provisions of the first marriage contract are encroached upon, the heirs of that marriage have recourse against the father, in case he should afterwards acquire a separate estate, which may enable him to fulfil both obligations.

Provision
to heirs.

19. In marriage contracts, the conquest, or a certain part of it, is frequently provided to the issue; by which is understood whatever real addition shall be made to the father's estate during the marriage by purchase or donation. Conquest therefore must be free, i. e. what remains after payment of debts due by the father. As in other provisions, so in conquest, the father is still *fiar*, and may therefore dispose of it for onerous or rational causes. Where heritable rights are provided to the *heirs* of a marriage, they fall to the eldest son, for he is the heir at law in heritage. Where a sum of money is so provided, the word *heir* is applied to the subject of the provision, and so marks out the executor, who is the heir in moveables. When an heritable right is provided to the *bairns* (or issue) of a marriage, it is divided equally among the children, if no division be made by the father; for such destination cuts off the exclusive right of the legal heir. No provision granted to *bairns* gives a special right of credit to any one child as long as the father lives: the right is granted *familie*; so that the whole must indeed go to one or other of them; but the father has a power inherent in him, to divide it among them in such proportions as he thinks best, yet so as none of them may be entirely excluded, except in extraordinary cases.

Clause of
return.

20. A clause of return is that, by which a sum in a bond or other right, is in a certain event limited to return to the granter himself, or his heirs. When a right is granted for onerous causes, the creditor may defeat the clause of return, even gratuitously. But, where the sum in the right flows from the granter, or where there is any other reasonable cause for the provision of return in his favour, the receiver cannot disappoint it gratuitously. Yet since he is *fiar*, the sum may be either assigned by him for an onerous cause, or affected by his creditors.

Heirs.

21. An heir is, in the judgement of law, *eadem persona cum defuncto*, and so represents the deceased universally, not only in his rights, but in his debts: in the first view, he is said to be an heir *actiue*; in the second, *passiue*. From this general rule are excepted, heirs substituted in a special bond, and even substituted in a disposition *omnium bonorum*, to take effect at the granter's death; for such substitutes are considered as singular successors, and their right as an universal legacy, which does not subject the legatee *ultra valorem*: but heirs male or of tailzie, though their right be limited to special subjects, are liable, not merely to the extent of the subject entailed or provided, but *in solidum*; because such rights are designed to carry a universal character, and so infer a universal representation of the granter. The heir of line is primarily liable for the debts of his predecessor; for he is the most proper heir, and so must be discussed before any other can be pursued; next to him the heir of conquest, because he also succeeds to

the *universitas* of the whole heritable rights which his predecessor had acquired by singular titles; then, the heir male, or of a marriage; for their propinquity of blood subjects them more directly than any other heir of tailzie, who may possibly be a stranger; and who for that reason is not liable to be discussed, except for such of the predecessor's debts or deeds as relate specially to the lands tailzied; as to which he is liable even before the heir of line. Heirs portioners are liable *pro rata* for their predecessor's debts; but if any of them prove insolvent, the creditors may, after discussing her, insist for her share against the rest, who will be liable in so far as they are *lucrati* by the succession. Where an heir, liable *subsidiarie*, pays the predecessor's debt, he has relief against the heir who is more directly liable, in respect of whom he is not co-heir, but creditor.

Law of
Scotland.

22. Before an heir can have an active title to his ancestor's rights, he must be entered by service and retour. He who is entitled to enter heir, is, before his actual entry, called *apparent heir*. The bare right of *Apparent* apparenancy carries certain privileges with it. An *apparent* heir may defend his ancestor's titles against any third party who brings them under challenge. Tenants may safely pay him their rents; and after they have once acknowledged him by payment, he may compel them to continue it; and the rents not uplifted by the apparent heir belong to his executors, upon his death.

23. As an heir is, by his entry, subjected universally to his ancestor's debts, apparent heirs have therefore a *year* (*annus deliberandi*) allowed to them from the ancestor's decease, to deliberate whether they will enter or not: till the expiry of which, though they may be charged by creditors to enter, they cannot be sued in any process founded upon such charge. Though declaratory actions, and others which contain no personal conclusion, may be pursued against the apparent heir without a previous charge, action does not lie even upon these, within the year, if the heir cannot make the proper defences without incurring a passive title. But judicial sales, commenced against an ancestor, may by special act of sederunt be continued upon a citation of the heir, without waiting the year of deliberating. This *annus deliberandi* is computed, in the case of a posthumous heir, from the birth of such heir. An apparent heir, who, by immixing with the estate of his ancestor, is as much subjected to his debts as if he had entered, can have no longer a right to deliberate whether he will enter or not.

24. All services proceed on *briefes* from the *Service of* chancery, which are called *briefes of inquest*, and have been *heirs*, long known in Scotland. The judge, to whom the brief is directed, is required to try the matter by an inquest of 15 sworn men. The inquest, if they find the claim verified, must declare the claimant heir to the deceased, by a verdict or service, which the judge must attest, and return the brief, with the service proceeding on it, to the chancery; from which an extract is obtained called the *retour of the service*.

25. The service of heirs is either *general* or *special*, *general* and *A general* service vests the heir in the right of all heritable subjects, which either do not require seisin, or which have not been perfected by seisin in the person of the ancestor. A public right, therefore, according to

Law of
Scotland.

the feudal law, though followed by seisin, having no legal effects till it be confirmed by the superior, must, as a personal right, be carried by a general service. A special service, followed by seisin, vests the heir in the right of the special subjects in which the ancestor died in feft.

Entry by
inventory

26. If an heir, doubtful whether the estate of his ancestor be sufficient for clearing his debts, shall, at any time within the *annus deliberandi*, exhibit upon oath a full inventory of all his ancestor's heritable subjects to the clerk of the shire where the lands lie; or, if there is no heritage requiring seisin, to the clerk of the shire where he died; and if, after the same is subscribed by the sheriff or sheriff-depute, the clerk, and himself, and registered in the sheriff's books, the extract thereof shall be registered within forty days after expiry of the *annus deliberandi* in the general register appointed for that purpose, his subsequent entry will subject him no farther than to the value of such inventory. If the inventory be given up and registered within the time prescribed, the heir may serve on it, even after the year.

27. Creditors are not obliged to acquiesce in the value of the estate given up by the heir; but, if they be real creditors, may bring the estate to a public sale, in order to discover its true value; since an estate is always worth what can be got for it. An heir by inventory, as he is in effect a trustee for the creditors, must account for that value to which the estate may have been improved since the death of the ancestor, and he must communicate to all the creditors the cases he has got in transacting with any one of them.

Entry upon
a precept of
clare constat.

28. Practice has introduced an anomalous sort of entry, without the interposition of an inquest, by the sole consent of the superior; who, if he be satisfied that the person applying to him is the next heir, grants him a precept (called of *clare constat*, from the first words of its recital), commanding his bailie to inquest him in the subjects that belonged to his ancestor. The heir, by taking seisin on this precept, becomes *passive*, liable for all the debts of his ancestor; and on the other hand, acquires an active title, as to the subjects contained in the precept in questions with the superior or his heirs; and they may, when followed by seisin, afford a title of prescription: But as no person can be declared an heir by private authority, they cannot bar the true heir from entering after 20 years, as a legal entry would have done; the true heir, in such case, having it still in his power to set aside that right, and obtain himself regularly served at any time within the years of prescription. Of the same nature is the entry by hasp and staple, commonly used in burgage tenements of houses; by which the bailie, without calling an inquest, cognosces or declares a person heir, upon evidence brought before himself; and, at the same time, inquests him in the subject, by the symbol of the hasp and staple of the door. Charges given by creditors to apparent heirs to enter, stand in the place of an actual entry, so as to support the creditor's diligence (clxxii. 2.)

Entry by
hasp and
staple.

A special
service in-
cludes a ge-
neral one.

29. A general service cannot include a special one; since it has no relation to any special subject, and carries only that class of rights on which seisin has not proceeded: but a special service implies a general one of the same kind or character, and consequently carries

even such rights as have not been perfected by seisin. Service is not required to establish the heir's right in titles of honour, or offices of the highest dignity; for these descend *jure sanguinis*.

Law of
Scotland.

30. An heir, by immixing with his ancestor's estate without entry, subjects himself to his debts, as if he had entered; or, in our law phrase, incurs a passive title. The only passive title by which an apparent heir becomes liable universally for all his ancestor's debts, is *gestio pro herede*, or his behaving as none but an heir has right to do. Behaviour as heir is inferred from the apparent heir's intromission, after the death of the ancestor, with any part of the lands or other heritable subjects belonging to the deceased, to which he himself might have completed an active title by entry.

Passive
titles.

*Gestio pro
herede.*

31. This passive title is excluded, if the heir's intromission be by order of law; or if it be founded on singular titles, and not as heir to the deceased. But an apparent heir's purchasing any right to his ancestor's estate, otherwise than at public roup (auction), or his possessing it in virtue of rights settled in the person of any near relation of the ancestor, to whom he himself may succeed as heir, otherwise than upon purchase by public sale, is deemed behaviour as heir.

32. Behaviour as heir is also excluded, where the intromission is small, unless an intention to defraud the ancestor's creditors be presumable from the circumstances attending it. Neither is behaviour inferred against the apparent heir, from the payment of his ancestor's debt, which is a voluntary act, and profitable to the creditors; nor by his taking out of briefs to serve; for one may alter his purpose, while it is not completed: nor by his assuming the titles of honour belonging to his ancestor, or exercising an honorary office hereditary in the family; for these are rights annexed to the blood, which may be used without proper representation. But the exercising an heritable office of profit, which may pass by voluntary conveyance, and consequently is adjudgeable, may reasonably be thought to infer a passive title. Lastly, As passive titles have been introduced, merely for the security of creditors; therefore, where questions concerning behaviour arise among the different orders of heirs, they are liable to one another no farther than *in valorem* of their several intromissions.

33. Another passive title in heritage, may be incurred by the apparent heir's accepting a gratuitous right from the ancestor, to any part of the estate to which he himself might have succeeded as heir; and it is called *præceptio hæreditatis*, because it is a taking of the succession by the heir before it opens to him by the death of his ancestor. If the right be onerous, there is no passive title; if the consideration paid for it does not amount to its full value, the creditors of the deceased may reduce it, in so far as it is gratuitous, but still it infers no passive title.

*Præceptio
hæreditatis*

34. The heir incurring this passive title is no farther liable, than if he had at the time of his acceptance entered heir to the granter, and so subjected himself to the debts that were then chargeable against him; but with the posterior debts he has nothing to do, not even with those contracted between the date of the right and the inquest taken upon it, and he is therefore called *successor titulo lucrativo post contractum debitum*.

35. Neither

Law of Scotland.

35. Neither of these passive titles takes place, unless the subject intermeddled with or disposed be such as the intromitter or receiver would succeed to as heir. In this also, these two passive titles agree, that the intromission in both must be after the death of the ancestor; for there can be no *termini habilis* of a passive title, while the ancestor is alive. But in the following respect they differ: *Gestio pro herede*, being a vicious passive title founded upon a quasi delict, cannot be objected against the delinquent's heir, if process has not been litiscontested while the delinquent himself was alive; whereas the *successor titulo lucrativo* is by the acceptance of the disposition understood to have entered into a tacit contract with the granter's creditors, by which he undertakes the burden of their debts; and all actions founded on contract are transmissible against heirs.

Other passive titles.

36. An apparent heir, who is cited by the ancestor's creditor in a process for payment, if he offers any peremptory defence against the debt, incurs a passive title; for he can have no interest to object against it, but in the character of heir. In the same manner, the heir's not renouncing upon a charge to enter heir, infers it: But the effect of both these is limited to the special debt pursued for, or charged upon. This passive title, which is inferred from the heir's not renouncing, has no effect till decree pass against him; and even a renunciation offered after decree, if the decree be in absence, will entitle the heir to a suspension of all diligence against his person and estate, competent upon his ancestor's debts.

37. By the principles of the feudal law, an heir, when he is to complete his titles by special service, must necessarily pass over his immediate ancestor, e. g. his father, if he was not infest; and serve heir to that ancestor who was last vest and seized in the right, and in whose *hereditatis jacens* the right must remain, till a title be connected thereto from him. As this bore hard upon creditors who might think themselves secure in contracting with a person whom they saw for some time in the possession of an estate, and from thence concluded that it was legally vested in him; it is therefore provided by act 1695, that every person, passing over his immediate ancestor who had been three years in possession, and serving heir to one more remote, shall be liable for the debts and deeds of the person interjected, to the value of the estate to which he is served. This being correctory of the feudal maxims, has been strictly interpreted, so as not to extend to the gratuitous deeds of the person interjected, nor to the case where the interjected person was a naked fief, and possessed only civilly through the liferenter.

Reduction by the heir ex capite et li.

38. Our law, from its jealousy of the weakness of mankind while under sickness, and of the importunity of friends on that occasion, has declared that all deeds affecting heritage, if they be granted by a person on deathbed, (i. e. after contracting that sickness which ends in death), to the damage of the heir, are ineffectual, except where the debts of the granter have laid him under a necessity to alien his lands. As this law of deathbed is founded solely in the privilege of the heir, deathbed deeds, when consented to by the heir, are not reducible. The term properly opposed to deathbed is *liege poustie*, by which is understood a state of health; and it gets the name, because persons in

health have the *legitima potestas*, or lawful power, of disposing of their property at pleasure.

Law of Scotland.

39. The two extremes being proved, of the granter's sickness immediately before signing, and of his death following it, though at the greatest distance of time, did, by our former law, found a presumption that the deed was granted on deathbed, which could not have been elided but by a positive proof of the granter's convalescence; but now the allegation of deathbed is also excluded, by his having lived 60 days after signing the deed. The legal evidence of convalescence is the granter's having been, after the date of the deed, at kirk OR market unsupported; for a proof of either will secure the deed from challenge. The going to kirk or market must be performed when the people are met together in the church or churchyard for any public meeting, civil or ecclesiastical, or in the market place at the time of public market. No other proof of convalescence is receivable, because at kirk and market there are always present unsuspected witnesses, which we can hardly be sure of in any other case.

What constitutes a deathbed deed.

40. The privilege of setting aside deeds *ex capite lesit*, is competent to all heirs, not to heirs of line only, but of conquest, tailzie, or provision; not only to the immediate, but to remoter heirs, as soon as the succession opens to them. But, where it is consented to or ratified by the immediate heir, it is secured against all challenge, even from the remoter. Yet the immediate heir cannot, by any antecedent writing, renounce his right of reduction, and thereby give strength to deeds that may be afterwards granted *in lesit* to his hurt; for no private renunciation can authorize a person to act contrary to a public law; and such renunciation is presumed to be extorted through the fear of exheredation. If the heir should not use this privilege of reduction, his creditor may, by adjudication, transfer it to himself; or he may, without adjudication, reduce the deed, libelling upon his interest as creditor to the heir: But the granter's creditors have no right to this privilege, in regard that the law of deathbed was introduced, not in behalf of the granter himself, but of his heir.

To what heirs this reduction is competent.

41. The law of deathbed strikes against dispositions of every subject to which the heir would have succeeded, or from which he would have had any benefit, had it not been so disposed. Deathbed deeds granted in consequence of a full or proper obligation in *liege poustie*, are not subject to reduction; but, where the antecedent obligation is merely natural, they are reducible. By stronger reason, the deceased cannot, by a deed merely voluntary, alter the nature of his estate on deathbed to the prejudice of his heir, so as from heritable to make it moveable; but if he should, in *liege poustie*, exclude his apparent heir, by an irrevocable deed containing reserved faculties, the heir cannot be heard to quarrel the exercise of these faculties on deathbed.

What rights may be thus set aside.

42. In a competition between the creditors of the deceased and of the heir, our law (act 1661) has justly preferred the creditors of the deceased, as every man's estate ought to be liable, in the first place, for his own debt. But this preference is, by the statute, limited to the case where the creditors of the deceased have used diligence against their debtor's estate, within three years from his death; and therefore the heir's

Law of
Scotland.

creditors may, after that period, affect it for their own payment. All dispositions by an heir, of the ancestor's estate, within a year after his death, are null, in so far as they are hurtful to the creditors of the ancestor. This takes place, though these creditors should have used no diligence, and even where the dispositions are granted after the year: It is thought they are ineffectual against the creditors of the deceased who have used diligence within the three years.

clxxvi.

SECT. XXI. *Of Succession in Moveables.*Moveable
succession
by law.

1. In the succession of moveable rights, it is an universal rule, that the next in degree to the deceased (or next of kin) succeeds to the whole; and if there are two or more equally near, all of them succeed by equal parts, without that prerogative, which takes place in heritage, of the eldest son over the younger, or of males over females. Neither does the right of representation (explained N^o clxxx. 4.) obtain in the succession of moveables, except in the single case of a competition between the full blood and the half blood; for a niece by the full blood will be preferred before a brother by the half blood, though she is by one degree more remote from the deceased than her uncle. Where the estate of a person deceased consists partly of heritage, and partly of moveables, the heir in the heritage has no share of the moveables, if there are others as near in degree to the deceased as himself: But where the heir, in such case, finds it his interest to renounce his exclusive claim to the heritage, and betake himself to his right as one of the next of kin, he may collate or communicate the heritage with the others, who in their turn must collate the moveables with him; so that the whole is thrown into one mass, and divided equally among all of them. This doctrine holds, not only in the line of descendants, but of collaterals; for it was introduced, that the heir might in no case be worse than the other next of kin.

Succession
in move-
ables by de-
termination.

2. One may settle his moveable estate upon whom he pleases, excluding the legal successor, by a testament; which is a written declaration of what a person wills to be done with his moveable estate after his death. No testamentary deed is effectual till the death of the testator; who may therefore revoke it at pleasure, or make a new one, by which the first loses its force, according to the rule, *voluntas testatoris est ambulatoria usque ad mortem*; and hence testaments are called *last* or *latter wills*. Testaments, in their strict acceptation, must contain a nomination of executors, i. e. of persons appointed to administer the succession according to the will of the deceased: Yet nothing hinders one from making a settlement of moveables, in favour of an universal legatee, though he should not have appointed executors; and on the other part, a testament where executors are appointed is valid, though the person who is to have the right of succession should not be named. In this last case, if the executor nominated be a stranger, i. e. one who has no legal interest in the moveable estate, he is merely a trustee, accountable to the next of kin; but he may retain a third of the dead's part (explained par. 6.) for his trouble in executing the testament; in payment of which, lega-

Law of
Scotland.

cies, if any be left to him, must be imputed. The heir, if he be named executor, has right to the third as a stranger; but if one be named who has an interest in the legal succession, he has no allowance, unless such interest be less than a third. Nuncupative or verbal testaments are not, by the law of Scotland, effectual for supporting the nomination of an executor, let the subject of the succession be ever so small: But verbal legacies, not exceeding 100l. Scots, are sustained: and even where they are granted for more, they are ineffectual only as to the excess.

3. A legacy is a donation by the deceased, to be paid by the executor to the legatee. It may be granted either in the testament or in a separate writing. Legacies are not due till the granter's death; and consequently they can transmit no right to the executors of the legatee, in the event that the granter survives him. A case occurred some years ago, where a testator left a legacy payable when the legatee arrived at a certain age. The legatee survived the testator, but died before the legacy was payable. It was found, chiefly upon the authority of the Roman law, that the legacy vested in the legatee *à morte testatoris*, and upon his decease was due to the legatee's next of kin.

4. Legacies, where they are general, i. e. of a certain sum of money indefinitely, give the legatee no right in any one debt or subject; he can only insist in a personal action against the executor for payment out of the testator's effects. A special legacy, i. e. of a particular debt due to the deceased, or of a particular subject belonging to him, is of the nature of an assignation, by which the property of the special debt or subject vests, upon the testator's death, in the legatee, who can therefore directly sue the debtor or possessor: Yet as no legacy can be claimed till the debts are paid, the executor must be cited in such process, that it may be known, whether there are free effects sufficient for answering the legacy. Where there is not enough for payment of all the legacies, each of the general legatees must suffer a proportional abatement: But a special legatee gets his legacy entire, though there should be nothing over for payment of the rest; and, on the contrary, he has no claim, if the debt or subject bequeathed should perish, whatever the extent of the free exequy may be.

5. Minors, after puberty, can test without their curators, wives without their husbands, and persons interdicted without their interdictors: but bastards cannot test, except in the cases afterwards set forth, N^o clxxii. 3. As a certain share of the goods, falling under the communion that is consequent on marriage, belongs, upon the husband's decease, to his widow, *jure relicte*, and a certain share to the children, called the *legitime*, *portion natural*, or *bairns part of gear*; one who has a wife or children, though he be the absolute administrator of all these goods during his life, and consequently may alien them by a deed *inter vivos*, in *liege possie*, even gratuitously, if no fraudulent intention to disappoint the wife or children shall appear, yet cannot impair their shares gratuitously on deathbed: nor can he dispose of his moveables to their prejudice by testament, though it should be made in *liege possie*; since testaments do not operate till the death of the testator.

Law of Scotland

Division of the estate.

at which period the division of the goods in communion have their full effect in favour of the widow and children.

6. If a person deceased leaves a widow, but no child, his testament, or, in other words, the goods in communion, divide in two: one half goes to the widow: the other is the dead's part, i. e. the absolute property of the deceased, on which he can test, and which falls to his next of kin, if he dies intestate. Where he leaves children, one or more, but no widow, the children get one half as their legitime: the other half is the dead's part; which falls also to the children, if the father has not tested upon it. If he leaves both widow and children, the division is tripartite: the wife takes one third by herself; another falls, as legitime, to the children equally among them, or even to an only child, though he should succeed to the heritage; the remaining third is the dead's part. Where the wife predeceases without children, one half is retained by the husband, the other falls to her next of kin: Where she leaves children, the division ought also to be bipartite, by the common rules of society, since no legitime is truly due on a mother's death: yet it is in practice tripartite; two-thirds remain with the surviving father, as if one-third were due to him *proprio nomine*, and another as administrator of the legitime for his children; the remaining third, being the wife's share, goes to her children, whether of that or any former marriage; for they are all equally her next of kin.

at debts of the entry.

7. Before a testament can be divided, the debts owing by the deceased are to be deducted; for all executry must be free. As the husband has the full power of burdening the goods in communion, his debts affect the whole, and so lessen the legitime and the share of the relict, as well as the dead's part. His funeral charges, and the mournings and alimony due to the widow, are considered as his proper debts; but the legacies, or other gratuitous rights granted by him on deathbed, affect only the dead's part. Bonds bearing interest, due by the deceased, cannot diminish the relict's share, because such bonds, when due to the deceased, do not increase it. The funeral charges of the wife predeceasing, fall wholly on her executors who have right to her share. Where the deceased leaves no family, neither husband, wife, nor child, the testament suffers no division, but all is the dead's part.

8. The whole issue of the husband, not only by that marriage which was dissolved by his death, but by any former marriage, has an equal interest in the legitime; otherwise the children of the first marriage would be cut out, as they could not claim the legitime during their father's life. But no legitime is due, (1.) Upon the death of a mother. (2.) Neither is it due to grandchildren, upon the death of a grandfather. Nor, (3.) To children forisfamiliated, i. e. to such as, by having renounced the legitime, are no longer considered as *in familia*, and so are excluded from any farther share of the moveable estate than they have already received.

uncertainty of the time.

9. As the right in legitime is strongly founded in nature, the renunciation of it is not to be inferred by implication. Renunciation by a child of his claim of legitime has the same effect as his death, in favour of the other children entitled thereto; and consequently the share of the renouncer divides among the rest; but he does not thereby lose his right to the dead's part, if

he does not also renounce his share in the father's own entry. Nay, his renunciation of the legitime, where he is the only younger child, has the effect to convert the whole subject thereof into dead's part, which will therefore fall to the renouncer himself as next of kin, if the heir be not willing to collate the heritage with him. Yet it has been found that the renunciation of the only younger child made the whole legitime accrue to the heir without collation.

10. For preserving an equality among all the children who continue entitled to the legitime, we have adopted the Roman doctrine of *collatio honorum*, whereby the child, who has got a provision from his father, is obliged to collate it with the others, and impute it towards his own share of the legitime; but if from the deed of provision, the father shall appear to have intended it as a *præcipuum* to the child, collation is excluded. A child is not bound to collate an heritable subject provided to him, because the legitime is not impaired by such provision. As this collation takes place only in questions among children who are entitled to the legitime, the relict is not bound to collate donations given her by her husband, in order to increase the legitime; and on the other part, the children are not obliged to collate their provisions, in order to increase her share.

11. As an heir in heritage must complete his titles by entry, so an executor is not vested in the right of the moveable estate of the deceased without confirmation. Confirmation is a sentence of the commissary or bishop's court, empowering an executor, one or more, upon making inventory of the moveables pertaining to the deceased, to recover, possess, and administer them, either in behalf of themselves, or of others interested therein. Testaments must be confirmed in the commissariat where the deceased had his principal dwelling house at his death. If he had no fixed residence, or died in a foreign country, the confirmation must be at *Edinburgh*, as the *commune forum*; but if he went abroad with an intention to return, the commissariat within which he resided before he left Scotland, is the only proper court.

12. Confirmation proceeds upon an edict, which is affixed on the door of the parish church where the deceased dwelt, and serves to intimate to all concerned the day of confirmation, which must be nine days at least after publishing the edict. In a competition for the office of executor, the commissary prefers, *primo loco*, the person named to it by the deceased himself, whose nomination he ratifies or confirms, without any previous decerniture: this is called the confirmation of a testament testamentary. In default of an executor named by the deceased, universal disponees are by the present practice preferred; after them the next of kin; then the relict; then creditors; and, lastly, special legatees. All these must be decerned executors, by a sentence called a *decree-dative*; and if afterwards they incline to confirm, the commissary authorizes them to administer, upon their making inventory, and giving security to make the subject thereof forthcoming to all having interest; which is called the confirmation of a testament dative.

13. A creditor, whose debtor's testament is already confirmed, may sue the executor, who holds the office for all concerned, to make payment of his debt. Where there

Confirmation of a testament executor

Law of
Scotland.

there is no confirmation, he himself may apply for the office, and confirm as executor-creditor; which entitles him to sue for and receive the subject confirmed, for his own payment: and where one applies for a confirmation as executor-creditor, every co-creditor may apply to be conjoined with him in the office. As this kind of confirmation is simply a form of diligence, creditors are exempted from the necessity of confirming more than the amount of their debts.

14. A creditor, whose debt has not been constituted or his claim not closed by decree, during the life of his debtor, has no title to demand directly the office of executor *qua* creditor: but he may charge the next of kin who stands off, to confirm, who must either renounce within twenty days after the charge, or be liable for the debt; and if the next of kin renounces, the pursuer may constitute his debt, and obtain a decree *cognitionis causa*, against the *hereditas jacens* of the moveables, upon which he may confirm as executor-creditor to the deceased. Where one is creditor, not to the deceased, but to his next of kin who stands off from confirming, he may affect the moveables of the deceased, by obtaining himself decerned executor-dative to the deceased, as if he were creditor to him, and not to his next of kin.

Confirmation
ad omiffa
fa, &c.

15. Where an executor has either omitted to give up any of the effects belonging to the deceased in inventory, or has estimated them below their just value, there is place for a new confirmation, *ad omiffa, vel malè appretiatà*, at the suit of any having interest; and if it appears that he has not omitted or undervalued any subject *dolosè*, the commissary will ordain the subjects omitted, or the difference between the estimations in the principal testament and the true values, to be added thereto; but if *dole* shall be presumed, the whole subject of the testament *ad omiffa vel malè appretiatà*, will be carried to him who confirms it, to the exclusion of the executor in the principal testament.

Legitimate
&c. trans-
mit with-
out confir-
mation.

16. The legitimate and relic's share, because they are rights arising *ex lege*, operate *ipso jure*, upon the father's death, in favour of the relic and children; and consequently pass from them, though they should die before confirmation, to their next of kin: whereas the dead's part, which falls to the children or other next of kin in the way of succession, remains, if they should die before confirming, *in bonis* of the first deceased; and so does not descend to their next of kin, but may be confirmed by the person who, at the time of confirmation, is the next of kin to the first deceased. Special assignments, though neither intimated nor made public during the life of the granter, carry to the assignee the full right of the subjects assigned, without confirmation. Special legacies are really assignments, and so fall under this rule. The next of kin, by the bare possession of the *ipsa corpora* of moveables, acquires the property thereof without confirmation, and transmits it to his executors.

Partial con-
firmation.

17. The confirmation of any one subject by the next of kin, as it proves his right of blood, has been adjudged to carry the whole executry out of the testament of the deceased, even what was omitted, and to transmit all to his own executors. The confirmation of a stranger, who is executor nominated, as it is merely a trust for the next of kin, has the effect to establish the right of the next of kin to the subjects

confirmed, in the same manner as if himself had confirmed them.

Law of
Scotland.

Executo-
how far
liable.

18. Executry, though it carries a certain degree of representation of the deceased, is properly an office: executors therefore are not subjected to the debts due by the deceased, beyond the value of the inventory; but, at the same time, they are liable in diligence for making the inventory effectual to all having interest. An executor-creditor who confirms more than his debt amounts to, is liable in diligence for what he confirms. Executors are not liable in interest, even upon such bonds recovered by them as carried interest to the deceased, because their office obliges them to retain the sums they have made effectual, in order to a distribution thereof among all having interest. This holds though they should again lend out the money upon interest, as they do it at their own risk.

19. There are certain debts of the deceased called privileged debts, which were always preferable to every other. Under that name are comprehended, medicines furnished to the deceased on deathbed, physicians fees during that period, funeral charges, and the rent of his house, and his servants wages for the year or term current at his death. These the executors are in safety to pay on demand. All the other creditors, who either obtain themselves confirmed, or who cite the executor already confirmed, within six months after their debtor's death, are preferred, *pari passu*, with those who have done more timely diligence; and therefore no executor can either retain for his own debt, or pay a testamentary debt, so as to exclude any creditor, who shall use diligence within the six months, from the benefit of the *pari passu* preference; neither can a decree for payment of debt be obtained, in that period, against an executor, because, till that term be elapsed, it cannot be known how many creditors may be entitled to the fund in his hands. If no diligence be used within the six months, the executor may retain for his own debt, and pay the residue *primo venienti*. Such creditors of the deceased as have used diligence within a year after their debtor's death, are preferable on the subject of his testament to the creditors of his next of kin.

In what
cases the
may pay
without
sentence.

20. The only passive title in moveables is vitious intromission; which may be defined, an unwarrantable intermeddling with the moveable estate of a person deceased, without the order of law. This is not confined, as the passive titles in heritage are, to the persons interested in the succession, but strikes against all intruders whatever. Where an executor confirmed intruders with more than he has confirmed, he incurs a passive title; fraud being in the common case presumed from his not giving up in inventory the full subject intermeddled with. Vitious intromission is also presumed, where the repositories of a dying person are not sealed up, as soon as he becomes incapable of sense, by his nearest relations; or, if he dies in a house not his own, they must be sealed by the master of such house, and the keys delivered to the judge ordinary, to be kept by him, for the benefit of all having interest.

Vitious in-
tromission.

21. The passive title of vitious intromission does not take place where there is any probable title or circumstance that takes off the presumption of fraud. In consequence of this rule, necessary intromission, or *custodiæ causa*,

law of Scotland.

Law of Scotland.

causa, by the wife or children, who only continue the possession of the deceased, in order to preserve his goods for the benefit of all concerned, infers no passive title. And, upon the same principle, an intromitter, by contracting himself executor, and thereby subjecting himself to account, before action be brought against him on the passive titles, purges the vitiolity of his prior intromission: and where the intromitter is one who is interested in the succession, e. g. next of kin, his confirmation, at any time within a year from the death of the deceased, will exclude the passive title, notwithstanding a prior citation. As this passive title was intended only for the security of creditors, it cannot be sued upon by legatees; and since it arises *ex delicto*, it cannot be pleaded against the heir of the intromitter. As in delicts, any one of many delinquents may be subjected to the whole punishment, so any one of many intromitters may be sued *in solidum* for the pursuer's debt, without calling the rest; but the intromitter who pays, has an action of relief against the others for their share of it. If the intromitters are sued jointly, they are liable, not *pro rata* of their several intromissions, but *pro virili*.

22. The whole of a debtor's estate is subjected to the payment of his debts; and therefore, both his heirs and executors are liable for them, in a question with creditors: but a succession is by law divided into the heritable and the moveable estate, each of these ought, in a question between the several successors, to bear the burdens which naturally affect it. Action of relief is accordingly competent to the heir who has paid a moveable debt, against the executor; and *vice versa*. This relief is not cut off by the deceased's having disposed either his land estate or his moveables, with the burden of his *whole* debts; for such burden is not to be construed as an alteration of the legal succession, but merely as a farther security to creditors, unless the contrary shall be presumed from the special style of the disposition.

IV. OF LAST HEIRS AND BASTARDS.

1. By our ancient practice, feudal grants taken to the vassal, and to a special order of heirs, without settling the last termination upon *heirs whatsoever*, returned to the superior, upon failure of the special heirs therein contained: but now that feus are become patrimonial rights, the superior is, by the general opinion, held to be fully divested by such grant, and the right descends to the vassal's heirs at law. And even where a vassal dies without leaving any heir who can prove the remotest propinquity to him, it is not the superior, as the old law stood, but the king, who succeeds as last heir, both in the heritable and moveable estate of the deceased, in consequence of the rule, *Quod nullius est, cedit domino Regi*.

2. If the lands to which the king succeeds be holden immediately of himself, the property is consolidated with the superiority, as if resignation had been made in the sovereign's hand. If they are holden of a subject, the king, who cannot be vassal to his own subject, names a donatory; who, to complete his title, must obtain a decree of declaratory; and thereafter he is presented to the superior, by letters of presentation from the king under the quarter seal, in which the supe-

rior is charged to enter the donatory. The whole estate of the deceased is, in this case, subject to his debts, and to the widow's legal provisions. Neither the king nor his donatory is liable beyond the value of the succession. A person who has no heir to succeed to him, cannot alien his heritage *in leeto*, to the prejudice of the king, who is entitled to set aside such deed, in the character of *ultimus heres*.

3. A bastard can have no legal heirs, except those of his own body; since there is no succession but by the father, and a bastard has no certain father. The king therefore succeeds to him, failing his lawful issue, as last heir. Though the bastard, as absolute proprietor of his own estate, can dispose of his heritage in *liege poustie*, and of his moveables by any deed *inter vivos*; yet he is disabled, *ex defectu natalium*, from bequeathing by testament, without letters of legitimation from the sovereign. If the bastard has lawful children, he may test without such letters, and name tutors and curators to his issue. Letters of legitimation, let their clauses be ever so strong, cannot enable the bastard to succeed to his natural father, to the exclusion of lawful heirs.

4. The legal rights of succession, being founded in marriage, can be claimed only by those who are born in lawful marriage; the issue therefore of an unlawful marriage are incapable of succession. A bastard is excluded, (1.) From his father's succession; because law knows no father who is not marked out by marriage. (2.) From all heritable succession, whether by the father or mother; because he cannot be pronounced lawful heir by the inquest, in terms of the brief. And, (3.) From the moveable succession of his mother; for though the mother be known, the bastard is not her lawful child, and legitimacy is implied in all succession conferred by law. A bastard, though he cannot succeed *jure sanguinis*, may succeed by destination, where he is specially called to the succession by an entail or testament.

5. Certain persons, though born in lawful marriage, are incapable of succession. Aliens are, from their allegiance to a foreign prince, incapable of succeeding in *feudal rights*, without naturalization. Children born in a foreign state, whose fathers were natural born subjects, and not attained, are held to be natural born subjects. Persons educated in, or professing, the Popish religion, if they shall neglect, upon their attaining the age of 15, to renounce its doctrines by a signed declaration, cannot succeed in *heritage*; but must give place to the next Protestant heir, who will hold the estate irredeemably, if the Popish heir does not, within ten years after incurring the irritancy, sign the *formula* prescribed by the statute 1700, c. 3.

CHAP. III. Of ACTIONS.

HITHERTO of *Persons*, and *Rights*, the two first objects of law: *Actions* are its third object, whereby persons make their rights effectual.

SECT. I. Nature, Division, &c. of Actions.

1. An action may be defined, A demand regularly made and insisted in, before the judge competent, for the attainment of a right.

Law of
Scotland.Division of
actions.

taining or recovering of a right; and it suffers several divisions, according to the different natures of the rights pursued upon.

2. Actions are either real or personal. A real action is that which arises from a right in the thing itself, and which therefore may be directed against all possessors of that thing: thus, an action for the recovery, even of a moveable subject, when founded on a *jus in re*, is in the proper acceptation real; but real actions are, in vulgar speech, confined to such as are directed against heritable subjects. A personal action is founded only on an obligation undertaken for the performance of some fact, or the delivery of some subject; and therefore can be carried on against no other than the person obliged, or his heirs.

3. Actions, again, are either ordinary or rescissory. All actions are, in the sense of this division, ordinary, which are not rescissory. Rescissory actions are divided, (1.) Into actions of proper improbation. (2.) Actions of reduction-improbation. (3.) Actions of simple reduction. Proper improbations, which are brought for declaring writings false or forged, are noticed below, N^o clxxxvi. 32. Reduction-improbation is an action, whereby a person who may be hurt or affected by a writing, insists for producing or exhibiting it in court, in order to have it set aside, or its effect ascertained, under the certification that the writing, if not produced, shall be declared false and forged. This certification is a fiction of law, introduced that the production of writings may be more effectually forced, and therefore it operates only in favour of the pursuer. Because the summons in the action proceeds on alleged grounds of falsehood, his majesty's advocate, who is the public prosecutor of crimes, must concur in it.

4. As the certification in this process draws after it so heavy consequences, two terms are assigned to the defenders for production. After the second term is elapsed, intimation must be made judicially to the defender, to satisfy the production within ten days; and till these are expired, no certification can be pronounced. Certification cannot pass against deeds recorded in the books of session, if the defender shall, before the second term, offer a condescence of the dates of their registration, unless falsehood be objected: in which case, the original must be brought from the record to the court. But an extract from the inferior court is no bar to certification; the principal writing must be laid before the court of session on a proper warrant.

5. In an action of simple reduction the certification is only temporary, declaring the writings called for null, until they be produced; so that they recover their full force after production, even against the pursuer himself; for which reason, that process is now seldom used. Because its certification is not so severe as in reduction-improbation, there is but one term assigned to the defender for producing the deeds called for.

6. The most usual grounds of reduction of writings are, the want of the requisite solemnities; that the granter was minor, or interdicted, or inhibited; or that he signed the deed on deathbed, or was compelled or frightened into it, or was circumvented; or that he granted it in prejudice of his lawful creditors.

7. In reductions on the head of force, or fear, or

fraud and circumvention, the pursuer must libel the particular circumstances from which his allegation is to be proved. Reduction is not competent upon every degree of force or fear; it must be such as would shake a man of constancy and resolution. Neither is it competent, on that fear which arises from the just authority of husbands or parents, over their wives or children, nor upon the fear arising from the regular execution of lawful diligence by caption, provided the deeds granted under that fear relate to the ground of debt contained in the diligence; but if they have no relation to that debt, they are reducible *ex metu*.

8. Alienations granted by debtors after contracting of lawful debts, in favour of conjunct or confident persons, without just and necessary causes, and without a just price really paid, are, by the act 1621, declared to be null. One is deemed a prior creditor, whose ground of debt existed before the right granted by the debtor; though the written voucher of the debt should bear a date posterior to it. Persons are accounted conjunct, whose relation to the granter is so near, as to bar them from judging in his cause. Confident persons are those who appear to be in the granter's confidence, by being employed in his affairs or about his person; as a doer, steward, or domestic servant.

9. Rights, though gratuitous, are not reducible, if the granter had, at the date thereof, a sufficient fund for the payment of his creditors. Provisions to children are, in the judgement of law, gratuitous; so that their effect, in a question with creditors, depends on the solvency of the granter; but settlements to wives, either in marriage contracts, or even after marriage, are onerous, in so far as they are rational; and consequently are not reducible, even though the granter was insolvent. This rule holds also in rational tochers contracted to husbands: But it must, in all cases, be qualified with this limitation, *if the insolvency of the granter was not publicly known*; for if it was, fraud is presumed in the receiver of the right, by contracting with the bankrupt.

10. The receiver of the deed, if he be a conjunct or confident person, must instruct or support the onerous cause of his right, not merely by his own oath, but by some circumstances or adminicles. But where a right is granted to a stranger, the narrative of it expressing an onerous cause, is sufficient *per se* to secure it against reduction.

11. All voluntary payments or rights made by a bankrupt to one creditor, to disappoint the more timorous diligence of another, are reducible at the instance of that creditor who has used the prior diligence. A creditor, though his diligence be but begun by citation, may insist in a reduction of all posterior voluntary rights granted to his prejudice; but the creditor who neglects to complete his begun diligence within a reasonable time, is not entitled to reduce any right granted by the debtor, after the time that the diligence is considered as abandoned.

12. A prohibited alienation, when conveyed by the receiver to another who is not privy to the fraud, subsists in the person of the *bono fide* purchaser. In the case of moveable rights, this nullity is receivable by exception; but it must be declared by reduction, where the right is heritable.

Reduction-
improbation.Simple re-
duction.Grounds of
reduction.Law
Scotl
v

law of Scotland.

Law of Scotland.

13. By act 1696, c. 5. all alienations by a bankrupt, within 60 days before his bankruptcy, to one creditor in preference to another, are reducible, at the instance even of such co-creditors as had not used the least step of diligence. A bankrupt is there described by the following characters; diligence used against him by horning and caption; and insolvency, joined either with imprisonment, retiring to the sanctuary, absconding, or forcibly defending himself from diligence. It is sufficient that a caption is raised against the debtor, though it be not executed, provided he has retired to shun it. And by the late bankrupt statute 23d Geo. III. it is declared, that in all actions and questions arising upon the construction and effect of the act 1696; when a debtor is out of Scotland, or not liable to be imprisoned by reason of privilege or personal protection, a charge of horning executed against him, together with either an arrestment of any of his personal effects not loosed or discharged within fifteen days, or a poinding executed of any of his moveables, or a decree of adjudication of any part of his heritable estate, or sequestration by the act of a proper court, of all or any part of his estate or effects, heritable or moveable, for payment of debt, shall, when joined with insolvency, be held as sufficient proof of notour bankruptcy; and from and after the last step of such diligence, the said debtor, if insolvent, shall be held bankrupt. It is provided (by said act 1696), that all heritable bonds or rights on which feisin may follow, shall be reckoned, in a question with the granter's other creditors upon this act, to be of the date of the feisin following thereon. But this act was found to relate only to securities for former debts, and not to *nova debita*.

ions ei-
rei
ecuto-
or pe-

14. Actions are divided into *rei persecutorie*, and *pœnales*. By the first, the pursuer insists barely to recover the subject that is his, or the debt due to him; and this includes the damage sustained; for one is as truly a sufferer in his patrimonial interest by that damage, as by the loss of the subject itself. In penal actions, which always arise *ex delicto*, something is also demanded by way of penalty.

lizies.

15. Actions of spuilzie, ejection, and intrusion, are penal. An action of spuilzie is competent to one dispossessed of a moveable subject violently, or without order of law, against the person dispossessing: not only for being restored to the possession of the subject, if extant, or for the value, if it be destroyed, but also for the violent profits, in case the action be brought within three years from the spoliation. Ejection and intrusion are, in heritable subjects, what spuilzie is in moveables. The difference between the two first is, that in ejection, violence is used; whereas the intruder enters into the void possession, without either a title from the proprietor, or the warrant of a judge. The actions arising from all the three are of the same general nature.

raven-
of law-
srs.

16. The action of contravention of law-burrows is also penal. It proceeds on letters of law-burrows, (from *borgh*, a cautioner), which contain a warrant to charge the party complained upon, that he may give security not to hurt the complainer in his person, family, or estate. These letters do not require the previous citation of the party complained upon, because the caution which the law requires is only for doing

what is every man's duty; but, before the letters are executed against him, the complainer must make oath that he dreads bodily harm from him. The penalty of contravention is ascertained to a special sum, according to the offender's quality; the half to be applied to the sisk, and the half to the complainer. Contravention is not incurred by the uttering of reproachful words, where they are not accompanied, either with acts of violence, or at least a real injury; and as the action is penal, it is elided by any probable ground of excuse.

17. Penalties are the consequences of delict, or transgression; and as no heir ought to be accountable for the delict of his ancestor, farther than the injured person has really suffered by it, penal actions die with the delinquent, and are not transmissible against heirs. Yet the action, if it has been commenced and litigated in the delinquent's lifetime, may be continued against the heir, though the delinquent should die during the dependence. Some actions are *rei persecutorie* on the part of the pursuer, when he insists for simple restitution; which yet may be penal in respect of the defender: e. g. the action on the passive title of vicious intromission, by which the pursuer frequently recovers the debt due to him by the deceased, though it should exceed the value of the goods intermeddled with by the defenders.

Penal actions, whether transmissible against the pursuer.

18. The most celebrated division of actions in our law is into *petitory*, *possessory*, and *declaratory*. *Petitory* actions are those, where something is demanded from the defender, in consequence of a right of property, or of credit in the pursuer: Thus, actions for restitution of moveables, actions of poinding, of forthcoming, and indeed all personal actions upon contracts or quasi-contracts, are petitory. *Possessory* actions are those which are founded, either upon possession alone, as spuilzies; or upon possession joined with another title, as removings; and they are competent either for getting into possession, for holding it, or for recovering it; analogous to the interdicts of the Roman law, *quorum bonorum, uti possidetis, and unde vi*.

Actions petitory, and

possessory.

19. An action of molestation is a possessory action, competent to the proprietor of a land estate, against those who disturb his possession. It is chiefly used in questions of commonry, or of controverted marches. Where a declarator of property is conjoined with a process of molestation, the session alone is competent to the action. Actions on briefs of perambulation, have the same tendency with molestations, viz. the settling of marches between conterminous lands.

Of molestation.

20. The action of mails and duties is sometimes petitory, and sometimes possessory. In either case, it is directed against the tenants and natural possessors of land estates, for payment to the pursuer of the rents remaining due by them for past crops, and of the full rent for the future. It is competent, not only to a proprietor whose right is perfected by feisin, but to a simple disponee, for a disposition of lands includes a right to the mails and duties; and consequently to an adjudger, for an adjudication is a judicial disposition. In the petitory action, the pursuer, since he founds upon the right, not possession, must make the proprietor, from whom the tenants derive their right, party to the suit; and he must support his claim by titles of property or diligences, preferable to those in the petitor.

Of mails and duties

Law of
Scotland.
Possessory.

of his competitor. In the possessory, the pursuer who libels that he, his ancestors, or authors, have been seven years in possession, and that therefore he has the benefit of a possessory judgement, need produce no other title than a feisin, which is a title sufficient to make the possession of heritage lawful; and it is enough, if he calls the natural possessors, though he should neglect the proprietor. A possessory judgement founded on seven years possession, in consequence either of a feisin or a tack, has this effect, that though one should claim under a title preferable to that of the possessor, he cannot compete with him in the possession, till in a formal process of reduction he shall obtain the possessor's title declared void.

Possessory
judgement.

Declara-
tory action.

21. A *declaratory* action is that, in which some right is craved to be declared in favour of the pursuer, but nothing sought to be paid or performed by the defender, such as declarators of marriage, of irritancy, of expiry of the legal reversion, &c. Under this class may be also comprehended rescizory actions, which without any personal conclusion against the defender, tend simply to set aside the rights or writings libelled, in consequence of which a contrary right or immunity arises to the pursuer. Decrees upon actions that are properly declaratory confer no new right; they only declare what was the pursuer's right before, and so have a retrospect to the period at which that right first commenced. Declarators, because they have no personal conclusion against the defender, may be pursued against an apparent heir without a previous charge given him to enter to his ancestor; unless where special circumstances require a charge.

Action for
proving the
tenor.

22. An action for proving the tenor, whereby a writing, which is destroyed or amissing, is endeavoured to be revived, is in effect declaratory. In obligations that are extinguishable barely by the debtor's retiring or cancelling them, the pursuer, before a proof of the tenor is admitted, must condescend on such a *casus amissionis*, or accident by which the writing was destroyed, as shows it was lost when in the creditor's possession; otherwise bonds that have been cancelled by the debtor on payment, might be reared up as still subsisting against him: But in writings which require contrary deeds to extinguish their effect, as assignments, dispositions, charters, &c. it is sufficient to libel that they were lost, even *casu fortuito*.

Adminicles
in writings.

23. Regularly no deed can be revived by this action, without some adminicle in writing, referring to that which is libelled: for no written obligation ought to be raised up barely on the testimony of witnesses. If these adminicles afford sufficient conviction that the deed libelled did once exist, the tenor is admitted to be proved by witnesses, who must depose, either that they were present at signing the deed, or that they afterwards saw it duly subscribed. Where the relative writings contain all the substantial clauses of that which is lost, the tenor is sometimes sustained without witnesses. In a writing which is libelled to have contained uncommon clauses, all these must appear by the adminicles. Actions of proving the tenor are, on account of their importance, appropriated to the court of session; and, by the old form, the testimony of the witnesses could not be received but in presence of all the judges.

Multiple-
poin ding.

24. The action of double or multiple-poin ding may

be also reckoned *declaratory*. It is competent to a debtor, who is distressed, or threatened with distress, by two or more persons claiming right to the debt, and who therefore brings the several claimants into the field, in order to debate and settle their several preferences, that so he may pay securely to him whose right shall be found preferable. This action is daily pursued by an arrestee, in the case of several arrestments used in his hands for the same debt; or by tenants in the case of several adjudgers, all of whom claim right to the same rents. In these competitions, any of the competitors may bring an action of multiple-poin ding in name of the tenants, or other debtors, without their consent, or even though they should disclaim the process; since the law has introduced it as the proper remedy for getting such competitions determined: And while the subject in controversy continues *in medio*, any third person who conceives he has a right to it, may, though he should not be cited as a defender, produce his titles, as if he were an original party to the suit, and will be admitted for his interest in the competition. By the foresaid bankrupt statute, however, it is competent, in the case of a forthcoming or multiple-poin ding raised on an arrestment used within thirty days prior, or four kalendar months subsequent, to a bankruptcy, for any other creditor producing his interest, and making his claim, in the process, at any time before the expiration of the four months, to be ranked in the same manner as if he had used the form of arrestment.

25. Certain actions may be called *accessory*, because they are merely preparatory or subservient to other actions. Thus, exhibitions *ad deliberandum*, at the instance of an heir against the creditors or custodiers of his ancestor's writings, are intended only to pave the way for future processes. An action of *transference* is also of this sort, whereby an action, during the pendency of which the defender happens to die, is craved to be transferred against his representative, in the same condition in which it stood formerly. Upon the pursuer's death his heir may insist in the cause against the defender, upon producing either a retour or a confirmed testament, according as the subject is heritable or moveable. Transferences being but incidental to other actions, can be pronounced by that inferior judge alone before whom the principal cause depended; but where the representatives of the deceased live in another territory, it is the supreme court must transfer. Obligations may now be registered summarily after the creditor's death; which before was not admitted, without a separate process of registration, to which the granter was necessarily to be made a party.

26. A process of *wakening* is likewise accessory. An action is said to sleep, when it lies over not insisted in for a year, in which case its effect is suspended; but even then it may, at any time within the years of prescription, be revived or awakened by a summons, in which the pursuer recites the last step of the process, and concludes that it may be again carried on as if it had not been discontinued. An action that stands upon any of the inner-house rolls cannot sleep; nor an action in which decree is pronounced, because it has got its full completion: Consequently the decree may be extracted after the year, without the necessity of a waking.

27. An action of *transumpt* falls under the same class.

Law
Scotla

Accesso
actions.

Transfe
ence.

Wake

Trans
class.

law of Scotland.

Law of Scotland.

class. It is competent to those who have a partial interest in writings that are not in their own custody, against the possessors thereof, for exhibiting them, that they may be transumed for their behoof. Though the ordinary title in this process be an obligation by the defender to grant transumps to the pursuer, it is sufficient if the pursuer can show that he has an interest in the writings; but in this case, he must transume them on his own charges. Actions of transumpt may be pursued before any judge-ordinary. After the writings to be transumed are exhibited, full duplicates are made out, collated, and signed, by one of the clerks of court, which are called *transumps*, and are as effectual as an extract from the register.

acts.

28. Actions proceeded anciently upon briefs issuing from the chancery, directed to the justiciary or judge-ordinary, who tried the matter by a jury, upon whose verdict judgement was pronounced: And to this day we retain certain briefs, as of *inquest*, *terce*, *indistry*, *tutory*, *perambulation*, and perhaps two or three others: But summonses were, immediately upon the institution of the college of justice, introduced in the place of briefs. A summons, when applied to actions pursued before the session, is a writ in the king's name, issuing from his signet upon the pursuer's complaint, authorizing messengers to cite the defender to appear before the court and make his defences, with certification, if he fail to appear, that decree will be pronounced against him in terms of the certification of the summons.

summonses. *inducie legales*.

29. The days indulged by law to a defender, between his citation and appearance, to prepare for his defence are called *inducie legales*. If he is within the kingdom, 21 and 6 days, for the first and second diets of appearance, must be allowed him for that purpose; and if out of it, 60 and 15. Defenders residing in Orkney or Zetland must be cited on 40 days. In certain summonses which are privileged, the *inducie* are shortened: Spuilzies and ejections proceed on 15 days; wakenings and transferences, being but incidental, on six; (see the list of privileged summonses, in act of sederunt June 29. 1672.) A summons must be executed, i. e. served against the defender, so as the last diet of appearance may be within a year after the date of the summons; and it must be called within a year after that diet, otherwise it falls for ever. Offence against the authority of the court, acts of malversation in office by any member of the college of justice, and acts of violence and oppression committed during the dependence of a suit by any of the parties, may be tried without a summons, by a summary complaint.

concurse actions.

30. Though the Romans acknowledged a concurrence of actions in their proceedings, it is not known in the law of Scotland. Therefore, where an action is in part penal, e. g. a removing, spuilzie, &c. a pursuer who restricts his demand to, and obtains a decree merely for, restitution, cannot thereafter bring a new process for the violent profits. Yet the same fact may be the foundation both of a criminal and civil action, because these two are intended for different purposes; the one for satisfying the public justice, the other for indemnifying the private party: And though the defender should be absolved in the criminal trial, for want of evidence, the party injured may bring an action *ad ci-*

vilem effectum, in which he is entitled to refer the libel to the defender's oath.

Accumulation of actions.

31. One libel or summons may contain different conclusions on the same ground of right, rescissory, declaratory, petitory, &c. if they be not repugnant to each other: Nay, though different sums be due to one, upon distinct grounds of debt, or even by different debtors, the creditor may insist against them all in the same summons.

Defences.

32. Defences are pleas offered by a defender for eliding an action. They are either *dilatory*, which do not enter into the cause itself, and so can only procure an absolvitor from the *lis pendens*: Or, *peremptory*, which entirely cut off the pursuer's right of action. The first, because they relate to the forms of proceeding must be offered *in limine judicii*, and all of them at once. But peremptory defences may be proposed at any time before sentence. By an act of sederunt, however (1787), all defences, both dilatory and peremptory, so far as they are known, must be proposed at returning the summons, under a penalty; and the same enactment extends to the cases of suspensions and advocations. The writings to be founded upon by the parties also must be produced: the intention of the court, in framing the act of sederunt, being to accelerate as much as possible the decision of causes.

Litiscontestation.

33. A cause, after the parties had litigated it before the judge, was said by the Romans to be *litiscontestata*. By litiscontestation a judicial contract is understood to be entered into by the litigants, by which the action is perpetuated against heirs, even when it arises *ex delicto*. By our law, litiscontestation is not formed till an act is extracted, admitting the libel or defences to proof.

SECT. II. Of Probation.

clxxxiv.

Probation.

1. All allegations by parties to a suit, must be supported by proper proof. Probation is either by writing, by the party's own oath, or by witnesses. In the case of allegations, which may be proved by either of the three ways, a proof is said to be admitted *prout de prout de jure*; because, in such case, all the legal methods of *jure*; probation are competent to the party; if the proof he brings by writing be lame, he may have recourse either to witnesses or to his adversary's oath; but, if he should first take himself to the proof by oath, he cannot thereafter use any other probation (for the reason assigned par. 3.); and, on the contrary, a pursuer who has brought a proof by witnesses, on an extracted act, is not allowed to recur to the oath of the defender.—Single combat, as a sort of appeal to Providence, was, by our ancient law, admitted as evidence, in matters both civil and criminal. It was afterwards restricted to the case of such capital crimes where no other proof could be had; some traces of this blind method of trial remained even in the reign of James VI. who, by 1600, c. 12. might authorize duels on weighty occasions.

by single combat;

2. As obligations or deeds signed by the party himself, or his ancensors or authors, must be, of all evidence, the least liable to exception; therefore every debt or allegation may be proved by proper evidence in writing. The solemnities essential to probative deeds have been already explained, (N^o clxxiv. 3. *et seq.*). Books of account kept by merchants, tradesmen, and other dealers

Law of
Scotland.

in business, though not subscribed, are probative against him who keeps them; and, in case of furnishings by a shopkeeper, such books, if they are regularly kept by him, supported by the testimony of a single witness, afford a *semiplea probatio* in his favour, which becomes full evidence by his own oath in supplement. Notorial instruments and executions by messengers bear full evidence, that the solemnities therein set forth were used, not to be invalidated otherwise than by a proof of falsehood; but they do not prove any other extrinsic facts therein averred, against third parties.

Probation
oath of party
in reference.

3. Regularly, no person's right can be proved by his own oath, nor taken away by that of his adversary; because these are the bare averments of parties in their own favour. But, where the matter in issue is referred by one of the parties to the oath of the other, such oath, though made in favour of the deponent himself, is decisive of the point; because the reference is a virtual contract between the litigants, by which they are understood to put the issue of the cause upon what shall be deposed: and this contract is so strictly regarded, that the party who refers to the oath of the other cannot afterwards, in a civil action, plead upon any deed against the party deposing, inconsistent with his oath. To obviate the snares that may be laid for perjury, he to whose oath of verity a point is referred, may refuse to depose, till his adversary swear that he can bring no other evidence in proof of his allegation.

4. A defender, though he cannot be compelled to swear to facts in a libel properly criminal; yet may, in trespasses, where the conclusion is limited to a fine, or to damages. In general, an oath of party cannot either hurt or benefit third parties; being, as to them, *res inter alios acta*.

Qualified
oaths.

5. An oath upon reference is sometimes qualified by special limitations restricting it. The qualities which are admitted by the judges as part of the oath, are called *intrinsic*; those which the judge rejects or separates from the oath, *extrinsic*. Where the quality makes a part of the allegation which is relevantly referred to oath, it is intrinsic. Thus, because a merchant, suing for furnishings after the three years, must, in order to make a relevancy, offer to prove by the defender's oath, not only the delivery of the goods, but that the price is still due; therefore, though the defender should acknowledge upon oath his having received the goods, yet, if he adds, that he paid the price, this last part being a denial that the debt subsists, is intrinsic, since it is truly the point referred to oath. Where the quality does not import an extinction of the debt, but barely a counter-claim, or *mutua petitio*, against the pursuer, it is held as extrinsic, and must be proved *aliunde*. Neither can a defender who in his oath admits the constitution of a debt, get off by adjecting the quality of payment, where the payment ought by its nature to be vouched by written evidence.

Oaths in
supplement.

6. Oaths of verity are sometimes referred by the judge to either party, *ex officio*; which, because they are not founded on any implied contract between the litigants, are not finally decisive, but may be traversed on proper evidence afterwards produced. These oaths are commonly put by the judge for supplying a lame or imperfect proof, and are therefore called *oaths in supplement*. (See par. 2.)

Oath of
calumny.

7. To prevent groundless allegations, oaths of ca-

lumny have been introduced, by which either party may demand his adversary's oath, that he believes the fact contained in his libel or defences to be just and true. As this is an oath, not of verity, but only of opinion, the party who puts it to his adversary does not renounce other probation; and therefore no party is bound to give an oath of calumny, on recent facts of his own, for such oath is really an oath of verity. These oaths have not been so frequent since the act of sederunt, Feb. 1. 1715, whereby any party, against whom a fact shall be alleged, is obliged, without making oath, to confess or deny it; and, in case of calumnious denial, is subjected to the expence that the other party has thereby incurred.

8. In all oaths, whether of verity or calumny, the citation carries, or at least implies, a certification, that if the party does not appear at the day assigned for deposing, he shall be held *pro confesso*; from a presumption of his consciousness, that the fact upon which he declines to swear makes against him; but no party can be held *pro confesso*, if he be in the kingdom, without a previous personal citation used against him. Though an oath which resolves into a *non memin*, cannot be said to prove any point; yet where one so deposes upon a recent fact, to which he himself was privy, his oath is considered as a dissembling of the truth, and he is held *pro confesso*, as if he had refused to swear.

A non m
mini oath

9. An oath *in litem*, is that which the judge refers to a pursuer, for ascertaining either the quantity or the value of goods which have been taken from him by the defender without order of law, or the extent of his damages. An oath *in litem*, as it is the affirmation of a party in his own behalf, is only allowed where there is proof that the other party has been engaged in some illegal act, or where the public policy has made it necessary, (see N° clxxiii. 11.) This oath, as to the quantities, is not admitted, where there is a concurring testimony of witnesses brought in proof of it. When it is put as to the value of goods, it is only an oath of credulity; and therefore it has always been subject to the modification of the court.

Oath in
litem.

10. The law of Scotland rejects the testimony of witnesses, (1.) In payment of any sum above 100l. Scots., all which must be proved either *scripto vel juramento*. (2.) In all gratuitous promises, though for the smallest trifle. (3.) In all contracts, where writing is either essential to their constitution (see N° clxxiv. 2.), or where it is usually adhibited, as in the borrowing of money. And it is a general rule, subject to the restrictions mentioned in the next part, that no debt or right, once constituted by writing, can be taken away by witnesses.

Probation
by witness
in what
cases
rejected.

11. On the other part, probation by witnesses is admitted to the extent of 100l. Scots, in payments, nuncupative legacies, and verbal agreements which contain mutual obligations. And it is received to the highest extent, (1.) In all bargains which have known engagements naturally arising from them, concerning moveable goods. (2.) In facts performed in satisfaction even of a written obligation, where such obligation binds the party precisely to the performance of them. (3.) In facts which with difficulty admit of a proof by writing, even though the effect of such proof should be the extinction of a written obligation, especially if the facts import fraud or violence; thus, a bond is reducible

in what
admitted.

L A W.

Law of Scotland.

cible *ex delo*, on a proof by witnesses. Lastly, All intromission by a creditor with the rents of his debtor's estate payable in grain, may be proved by witnesses; and even intromission with the silver rent, where the creditor has entered into the total possession of the debtor's lands.

What persons rejected as witnesses.

12. No person, whose near relation to another bars him from being a judge in his cause, can be admitted as a witness for him; but he may against him, except a wife or child, who cannot be compelled to give testimony against the husband or parent, *ob reverentiam personæ, et metum perjurii*. Though the witness, whose propinquity to one of the parties is objected to, be as nearly related to the other, the objection stands good.

13. The testimony of infamous persons is rejected, i. e. persons who have been guilty of crimes that law declares to infer infamy, or who have been declared infamous by the sentence of a judge; but *infamia facti* does not disqualify a witness. Pupils are inhabile witnesses; being, in the judgement of law, incapable of the impressions of an oath. And in general witnesses otherwise exceptionable may, where there is a penury of witnesses arising from the nature or circumstances of the fact, be received *cum nota*; that is, their testimony, though not quite free from suspicion, is to be conjoined with the other evidence, and to have such weight given it as the judge shall think it deserves.

Purgation of witnesses.

14. All witnesses, before they are examined in the cause, are purged of partial counsel; that is, they must declare, that they have no interest in the suit, nor have given advice how to conduct it; that they have got neither bribe nor promise, nor have been instructed how to depose; and that they bear no enmity to either of the parties. These, because they are the points put to a witness before his making oath, are called *initialia testimoniæ*. Where a party can bring present proof of a witness's partial counsel, in any of the above particulars, he ought to offer it before the witness be sworn; but, because such objection, if it cannot be instantly verified, will be no bar to the examination, law allows the party in that case to protest for *reprobator*, before the witness is examined; i. e. that he may be afterwards allowed to bring evidence of his enmity, or other inability. *Reprobator* is competent even after sentence, where protestation is duly entered; but in that case, the party insisting must consign 100l. Scots, which he forfeits if he succumb. This action must have the concurrence of the king's advocate, because the conclusion of it imports perjury; and for this reason, the witness must be made a party to it.

Diligence against witnesses.

15. The interlocutory sentence or warrant, by which parties are authorized to bring their proof, is either by way of act, or of incident diligence. In an act, the lord ordinary who pronounces it is no longer judge in the process; but in an incident diligence, which is commonly granted upon special points, that do not exhaust the cause, the lord ordinary continues judge. If a witness does not appear at the day fixed by the warrant of citation, a second warrant is granted of the nature of a caption, containing a command to messengers to apprehend and bring him before the court. Where the party to whom a proof is granted, brings none within the term allowed by the warrant, an interlocutor is pronounced, circumducing the term, and pre-

cluding him from bringing evidence thereafter. Where evidence is brought, if it be upon an act, the lord ordinary on the acts, after the term for providing is elapsed, declares the proof concluded; and thereupon a state of the case is prepared by the ordinary on concluded causes, which must be judged by the whole lords; but if the proof be taken upon an incident diligence, the import of it may be determined by the lord ordinary in the cause.

16. Where facts do not admit a direct proof, presumptions are received as evidence which, in many cases make as convincing a proof as the direct. Presumptions are consequences deduced from facts known or proved, which infer the certainty, or at least a strong probability, of another fact to be proved. This kind of probation is therefore called *artificial*, because it requires a reasoning to infer the truth of the point in question, from the facts that already appear in proof. Presumptions are either, 1. *juris et de jure*; 2. *juris*; or, 3. *hominis* or *judicis*. The first sort obtains, where statute or custom establishes the truth of any point upon a presumption; and it is so strong, that it rejects all proof that may be brought to elide it in special cases. Thus, the testimony of a witness, who forwardly offers himself without being cited, is, from a presumption of his partiality, rejected, let his character be ever so fair; and thus also, a minor, because he is by law presumed incapable of conducting his own affairs, is upon that presumption disabled from acting without the consent of his curators, though he should be known to behave with the greatest prudence. Many such presumptions are fixed by statute.

17. *Præsumptiones juris* are those which our law books or decisions have established, without founding any particular consequence upon them, or statuting *super præsumpto*. Most of this kind are not proper presumptions inferred from positive facts, but are founded merely on the want of a contrary proof; thus, the legal presumptions for freedom, for life, for innocence, &c. are in effect so many negative propositions, that servitude, death, and guilt, are not to be presumed, without evidence brought by him who makes the allegation. All of them, whether they be of this sort, or proper presumptions, as they are only conjectures formed from what commonly happens, may be elided, not only by direct evidence, but by other conjectures, affording a stronger degree of probability to the contrary. *Præsumptiones hominis* or *judicis*, are those which arise daily from the circumstances of particular cases; the strength of which is to be weighed by the judge.

18. A *fiction juris* differs from a presumption. Things are presumed, which are likely to be true; but a fiction of law assumes for truth what is either certainly false, or at least is as probably false as true. Thus an heir is feigned or considered in law as the same person with his ancestor. Fictions of law must, in their effects, be always limited to the special purposes of equity for which they were introduced; see an example, N^o clxxxiii. 3.

SECT. III. Of Sentences and their Executions.

1. Property would be most uncertain, if debateable points might, after receiving a definitive judgement, be brought again in question, at the pleasure of either of the

Circumduction.

Law of Scotland.
Res judicata.
Decrees *in foro*.

the parties: every state has therefore fixed the character of final to certain sentences or decrees, which in the Roman law are called *res judicata*, and which exclude all review or rehearing.

2. Decrees of the court of session, are either *in foro contradictoria*, where both parties have litigated the cause, or in absence of the defender. Decrees of the session *in foro* cannot, in the general case, be again brought under the review of the court, either on points which the parties neglected to plead before sentence (which we call *competent* and *omitted*), or upon points pleaded and found insufficient (proposed and repelled). But decrees, though *in foro*, are reversible by the court, where either they labour under essential nullities; e. g. where they are *ultra petita*, or not conformable to their grounds and warrants, or founded on an error in calcul, &c.; or where the party against whom the decree is obtained has thereafter received evidence sufficient to overturn it, of which he knew not before.

Two consecutive interlocutors are final.

3. As parties might formerly reclaim against the sentences of the session, at any time before extracting the decree, no judgement was final till extract; but now, a sentence of the inner house, either not reclaimed against within six sederunt days after its date, or adhered to upon a reclaiming bill, though it cannot receive execution till extract, makes the judgement final as to the court of session. And by an order of the house of lords, March 24. 1725, no appeal is to be received by them from sentences of the session, after five years from extracting the sentence; unless the person entitled to such appeal be minor, clothed with a husband, *non compos mentis*, imprisoned, or out of the kingdom. Sentences pronounced by the lord ordinary have the same effect, if not reclaimed against, as if they were pronounced in presence; and all petitions against the interlocutor of an ordinary must be preferred within eight sederunt days after signing such interlocutor.

Decrees in absence.

4. Decrees, in absence of the defender, have not the force of *res judicata* as to him; for where the defender does not appear, he cannot be said to have subjected himself by the judicial contract which is implied in litiscontestation; a party therefore may be restored against these, upon paying to the other his costs in recovering them. The sentences of inferior courts may be reviewed by the court of session,—before decree, by advocacy,—and after decree, by suspension or reduction; which two last are also the methods of calling in question such decrees of the session itself, as can again be brought under the review of the court.

Decrees reviewed either by reduction or suspension.

5. Reduction is the proper remedy, either where the decree has already received full execution by payment, or where it decrees nothing to be paid or performed, but simply declares a right in favour of the pursuer. Suspension is that form of law by which the effect of a sentence condemnatory, that has not yet received execution, is stayed or postponed till the cause be again considered. The first step towards suspension is a bill preferred to the lord ordinary on the bills. This bill, when the desire of it is granted, is a warrant for issuing letters of suspension which pass the signet; but if the presenter of the bill shall not, within 14 days after passing it, expedite the letters, execution may by act of sederunt 1677 proceed on the sen-

tence. In practice, however, it is usual for the charger to put up a protestation in the minute book for production of the suspension, which may be expedited at any time before this is done; and if the suspender shall allow the protestation to be extracted, the suit falls. Suspensions of decrees *in foro* cannot pass, but by the whole lords in time of session, and by three in vacation time; but other decrees may be suspended by any one of the judges. By the late act of sederunt (1787), in order to remedy the abuse of presenting a multiplicity of bills of suspension of the decrees of inferior judges in small cases which have passed in absence, it is declared, that all bills of suspension of decrees by inferior judges, in absence, of the defenders in causes under 12l. sterling value, shall be refused and remitted to the inferior judge, if competent: the suspender, however, before being heard in the inferior court, reimbursing the charger of the expences incurred by him previous to the remit.

Law of Scotland.

6. As suspension has the effect of staying the execution of the creditor's legal diligence, it cannot, in the general case, pass without caution given by the suspender to pay the debt, in the event it shall be found due. Where the suspender cannot, from his low or suspected circumstances, procure unquestionable security, the lords admit juratory caution, i. e. such as the suspender swears is the best he can offer; but the reasons of suspension are, in that case, to be considered with particular accuracy at passing the bill. Decrees in favour of the clergy, of universities, hospitals, or parish-schoolmasters, for their stipends, rents, or salaries, cannot be suspended, but upon production of discharges, or on consignation of the sums charged for. A charger, who thinks himself secure without a cautioner, and wants despatch, may, where a suspension of his diligence is sought, apply to the court to get the reasons of suspension summarily discussed on the bill.

Suspender must give caution.

7. Though he, in whose favour the decree suspended is pronounced, be always called the charger, yet a decree may be suspended before a charge be given on it. Nay, suspension is competent even where there is no decree, for putting a stop to any illegal act whatsoever: thus, a building, or the exercise of a power which one assumes unwarrantably, is a proper subject of suspension. Letters of suspension are considered merely as a prohibitory diligence; so that the suspender, if he would turn provoker, must bring an action of reduction. If, upon discussing the letters of suspension, the reasons shall be sustained, a decree is pronounced, suspending the letters of diligence on which the charge was given *simpliciter*; which is called a *decree of suspension*, and takes off the effect of the degree suspended. If the reasons of suspension be repelled, the court find the letters of diligence orderly proceeded, i. e. regularly carried on: and they ordain them to be put to farther execution.

Suspension when coarcted.

8. Decrees are carried into execution, by diligence, either against the person or against the estate of the debtor. The first step of personal execution is by letters of horning which pass by a warrant of the court of session, on the decrees of magistrates of boroughs, sheriffs, admirals, and commissaries. If the debtor does not obey the will of the letters of horning within the days of the charge, the charger, after denouncing

Execution of decrees.

Law of Scotland.

That persons secured against caption.

Prisoners must be closely confined.

him rebel, and registering the horning, may apply for letters of caption, which contain a command, not only to messengers, but to magistrates, to apprehend and imprison the debtor. All messengers and magistrates, who refuse their assistance in executing the caption, are liable *judicialiter* for the debt; and such subsidiary action is supported by the execution of the messenger, employed by the creditor, expressing that they were charged to concur, and would not. Letters of caption contain an express warrant to the messenger, in case he cannot get access, to break open all doors and other lock-fast places.

9. Law secures peers, married women, and pupils, against personal execution by caption upon civil debts. Such commoners also as are elected to serve in parliament, are secured against personal execution by the privilege of parliament. No caption can be executed against a debtor within the precincts of the king's palace of Holyroodhouse; but this privilege of sanctuary afforded no security to criminals, as that did which was by the canon law conferred on churches and religious houses. Where the personal presence of a debtor, under caption, is necessary in any of our supreme courts, the judges are empowered to grant him a protection, for such time as may be sufficient for his coming and going, not exceeding a month. Protection from diligence is also granted by the court of session under the late bankrupt statute, where it is applied for, with concurrence of the trustee, or a certain number of the creditors, as the case may require.

10. After a debtor is imprisoned, he ought not to be indulged the benefit of the air, not even under a guard; for creditors have an interest, that their debtor be kept under close confinement, that, by the *squalor carceris*, they may be brought to pay their debt: and any magistrate or jailor, who shall suffer the prisoner to go abroad, without a proper attestation, upon oath, of the dangerous state of his health, is liable *subsidiarie* for the debt. Magistrates are in like manner liable if they shall suffer a prisoner to escape through the insufficiency of their prison: but if he shall escape under night, by the use of instruments, or by open force, or by any other accident which cannot be imputed to the magistrate or jailor, they are not chargeable with the debt; provided they shall have immediately after his escape, made all possible search for him. A case lately occurred where a messenger having apprehended a person for a debt, upon letters of caption, delivered him over to the provost of the burgh, and took a receipt for him. The provost allowed him to remain at the inn all night, and afterwards allowed him what is called *open gaol*, by which he had access to the court-house, under the same roof with the prison, where he transacted business. As the person at whose instance he was apprehended upon the caption, considered that the magistrates had not kept the debtor in prison as commanded by the letters, he brought an action against them for the debt, although the debtor had not so much as attempted to make his escape. It was contended by the magistrates, that they were not liable, having only followed the usual practice of the burgh: but the court of session, considering the magistrates as principal keepers of the prison, and as such having no discretionary power, were of opinion, that the debtor had never been imprisoned in the eye of law, and

therefore found the magistrates liable; and their judgment was affirmed upon an appeal. Regularly, no prisoner for debt upon letters of caption, though he should have made payment, could be released without letters of suspension, containing a charge to the jailor to let him at liberty; because the creditor's discharge could not take off the penalty incurred by the debtor for contempt of the king's authority: but to save unnecessary expence to debtors in small debts, jailors are empowered to let go prisoners where the debt does not exceed 200 merks Scots, upon production of a discharge in which the creditor consents to his release.

11. Our law from a consideration of compassion, allows insolvent debtors to apply for a release from prison upon a *cessio bonorum*, i. e. upon their making over to the creditors all their estate real and personal. This must be insisted for by way of action, to which all the creditors of the prisoner ought to be made parties. The prisoner must, in this action, which is cognizable only by the court of session, exhibit a particular inventory of his estate, and make oath that he has no other estate than is therein contained, and that he has made no conveyance of any part of it, since his imprisonment, to the hurt of his creditors. He must also make oath, whether he has granted any disposition of his effects before his imprisonment, and condescend on the persons to whom, and on the cause of granting it; that the court may judge, whether, by any collusive practice, he has forfeited his claim to liberty.

12. A fraudulent bankrupt is not allowed this privilege; nor a criminal who is liable in any delictum or indemnification to the party injured or his executors, though the crime itself should be extinguished by a pardon. A disposition granted on a *cessio bonorum* is merely in farther security to the creditors, not in satisfaction or *in solutum* of the debts. If, therefore, the debtor should acquire any estate after his release, such estate may be attached by his creditors, as if there had been no *cessio*, except in so far as is necessary for his subsistence. Debtors, who are set free on a *cessio bonorum*, are obliged to wear a habit proper to dyvours or bankrupts. The lords are prohibited to dispense with this mark of ignominy, unless, in the summons and process of *cessio*, it be libelled, sustained, and proved, that the bankruptcy proceeds from misfortune. And bankrupts are condemned to submit to the habit, even where no suspicion of fraud lies against them, if they have been dealers in an illicit trade.

13. Where a prisoner for debt declares upon oath, before the magistrate of the jurisdiction, that he has not wherewith to maintain himself, the magistrate may set him at liberty, if the creditor, in consequence of whose diligence he was imprisoned, does not aliment him within ten days after intimation made for that purpose. But the magistrate may, in such case, detain him in prison, if the creditor chooses to bear the burden of the aliment rather than release him. The statute authorizing this release, which is usually called the *act of grace*, is limited to the case of prisoners for civil debts.

14. Decrees are executed against the moveable estate of the debtor by arrestment or pouding; and against his heritable estate, by inhibition, or adjudication. If one be condemned, in a removing or other process, to quit the possession of lands, and refuses, notwithstanding

a charge, letters of ejection are granted of course, or daining the sheriff to eject him, and to enter the obtainer of the decree into possession. Where one opposes by violence the execution of a decree, or of any lawful diligence, which the civil magistrate is not able by himself and his officers to make good, the execution is enforced *manu militari*.

nished by a pecuniary fine to be applied to his use. By the law of Scotland, no private party, except the person injured, or his next of kin, can accuse criminally; but the king's advocate, who in this question represents the community, has a right to prosecute all crimes *in vindictam publicam*, though the party injured should refuse to concur. Smaller offences, as petty riots, injuries, &c. which do not demand the public vengeance, pass generally by the appellation of *delicta*, and are punished either by fine or imprisonment.

Law of Scotland

Decrees arbitral.

15. A decree arbitral, which is a sentence proceeding on a submission to arbiters, has some affinity with a judicial sentence, though in most respects the two differ. A submission is a contract entered into by two or more parties who have disputable rights or claims, whereby they refer their differences to the final determination of an arbiter or arbiters, and oblige themselves to acquiesce in what shall be decided. Where the day within which the arbiters are to decide, is left blank in the submission, practice has limited the arbiters power of deciding to a year. As this has proceeded from the ordinary words of style, empowering the arbiters to determine betwixt and the day of

2. The essence of a crime is, that there be an intention in the actor to commit; for an action in which the will of the agent has no part is not a proper object either of rewards or punishments: hence arises the rule *crimen dolo contrahitur*. Simple negligence does not therefore constitute a proper crime. Yet where it is extremely gross, it may be punished arbitrarily. Far less can we reckon in the number of crimes, those committed by an idiot or furious person: but lesser degrees of tauty, which only darken reason, will not afford a total detence, though they may save from the *pæna ordinaria*. Actions committed in drunkenness are not to be considered as involuntary, seeing the drunkenness itself, which was the first cause of the action, is both voluntary and criminal.

What essential to crimes.

Submission.

next to come; therefore, where a submission is indefinite, without specifying any time, like all other contracts or obligations, it subsists for 40 years. Submissions, like mandates, expire by the death of any of the parties submitters before sentence. As arbiters are not vested with jurisdiction, they cannot compel witnesses to make oath before them, or havers of writings to exhibit them; but this defect is supplied by the court of session, who, at the suit of the arbiters, or of either of the parties, will grant warrant for citing witnesses, or for the exhibition of writing. For the same reason, the power of arbiters is barely to decide; the execution of the decree belongs to the judge. Where the submitters consent to the registration of the decree arbitral, performance may be enforced by summary diligence.

3. On the same principle, such as are in a state of infancy, or in the confines of it, are incapable of a criminal action, dole not being incident to that age; but the precise age at which a person becomes capable of dole, being fixed neither by nature nor by statute, is by our practice to be gathered by the judge, as he best can, from the understanding and manners of the person accused. Where the guilt of a crime arises chiefly from statute, the actor, if he is under puberty, can hardly be found guilty; but, where nature itself points out its deformity, he may, if he is *proximus pubertati*, be more easily presumed capable of committing it: yet, even in that case, he will not be punished *pæna ordinaria*.

Powers of arbiters.

16. The power of arbiters is wholly derived from the consent of parties. Hence where their powers are limited to a certain day, they cannot pronounce sentence after that day. Nor can they subject parties to a penalty higher than that which they have agreed to in the submission. And where a submission is limited to special claims, sentence pronounced on subjects not specified in the submission is null, as being *ultra vires compromissi*.

4. One may be guilty of a crime, not only by perpetrating it himself, but being accessory to a crime committed by another; which last is by civilians styled *ope et consilio*, and, in our law phrase, *art and part*. A person may be guilty, art and part, either by giving advice or counsel to commit the crime; or, 2. By giving warrant or mandate to commit it; or, 3. By actually assisting the criminal in the execution. It is generally agreed by doctors, that, in the more atrocious crimes, the adviser is equally punishable with the criminal; and that, in the slighter, the circumstances arising from the adviser's lesser age, the jocular or careless manner of giving advice, &c. may be received as pleas for softening the punishment. One who gives mandate to commit a crime, as he is the first spring of action, seems more guilty than the person employed as the instrument in executing it; yet the actor cannot excuse himself under the pretence of orders which he ought not to have obeyed.

Accessories, or art and part.

Decrees arbitral, how far reducible.

17. But, on the other hand, as submissions are designed for a most favourable purpose, the amicable compiling of differences, the powers thereby conferred on arbiters receive an ample interpretation. Decrees arbitral are not reducible upon any ground, except corruption, bribery, or falsehood.

5. Assistance may be given to the committer of a crime, not only in the actual execution, but previous to it, by furnishing him, intentionally, with poison, arms, or the other means of perpetrating it. That sort of assistance which is not given till after the criminal act, and which is commonly called *abetting*, though it be of itself criminal, does not infer art and part of the principal

clxxxvi.

SECT. IV. Of Crimes.

Crimes,

1. The word *crime*, in its most general sense, includes every breach either of the law of God or of our country; in a more restricted meaning, it signifies such transgressions of law as are punishable by courts of justice. Crimes were, by the Roman law, divided into public and private. Public crimes were those that were expressly declared such by some law or constitution, and which, on account of their more atrocious nature and hurtful consequences, might be prosecuted by any member of the community. Private crimes could be pursued only by the party injured, and were generally pu-

public, and

private.

Treason.

ins of
treason.

principal crime; as if one should favour the escape of a criminal, knowing him to be such, or conceal him from justice.

6. Those crimes that are in their consequences most hurtful to society, are punished capitally, or by death; others escape with a lesser punishment, sometimes fixed by statute, and sometimes arbitrary, i. e. left to the discretion of the judge, who may exercise his jurisdiction, either by fine, imprisonment, or a corporal punishment. Where the punishment is left, by law, to the discretion of the judge, he can in no case extend it to death. The single escape of the criminal falls on conviction, in all capital trials, though the sentence should not express it.

7. Certain crimes are committed more immediately against God himself; others, against the state; and a third kind, against particular persons. The chief crime in the first class, cognizable by temporal courts, is *blasphemy*, under which may be included *atheism*. This crime consists in the denying or vilifying the Deity, by speech or writing. All who curse God or any of the persons of the blessed Trinity, are to suffer death, even for a single act; and those who deny him, if they persist in their denial. The denial of a Providence, or of the authority of the holy Scriptures, is punishable capitally for the third offence.

8. No prosecution can now be carried on for witchcraft or conjuration. But all who undertake, from their skill in any occult science, to *tell fortunes, or discover stolen goods*, are to suffer imprisonment for a year, stand in the pillory four times in that year, and find surety for their future good behaviour.

9. Some crimes against the state are levelled directly against the supreme power, and strike at the constitution itself: others discover such a contempt of law, as tends to baffle authority, or slacken the reins of government. *Treason, crimen majestatis*, is that crime which is aimed against the majesty of the state; and can be committed only by those who are subjects of that state either by birth or residence. Soon after the union of the two kingdoms in 1707, the laws of treason, then in force in England, were made ours by 7 Ann. c. 21. both with regard to the facts constituting that crime, to the forms of trial, the corruption of blood, and all the penalties and forfeitures consequent on it.

10. It is high treason, by the law of England, to imagine the death of the king, queen consort, or of the heir apparent of the crown; to levy war against the king, or adhere to his enemies; to counterfeit the king's coin, or his great or privy seal; to kill the chancellor, treasurer, or any of the 12 judges of England, while they are doing their offices: which last article is by the forenamed act 7 Ann. applied to Scotland, in the case of slaying any judge of the session or of justice sitting in judgement. Those who wash, clip, or lighten, the proper money of the realm; who advisedly affirm by writing or printing, that the pretender has any right to the crown, that the king and parliament cannot limit the succession to it, or who hold correspondence with the pretender, or any person employed by him, are also guilty of treason.

11. The forms of proceeding in the trial of treason, whether against peers or commoners, are set forth in a small treatise, published by order of the house of lords

in 1709, subjoined to a collection of statutes concerning treason. By the conviction upon this trial, the whole estate of the traitor forfeits to the crown. His blood is also corrupted, so that, on the death of an ancestor, he cannot inherit; and the estate which he cannot take, falls to the immediate superior as escheat, *ob defectum heredis*, without distinguishing whether the lands hold of the crown, or of a subject. No attainer for treason shall, after the death of the pretender and all his sons, hurt the right of any person, other than that of the offender, during his natural life; the rights of creditors and other third parties, in the case of forfeiture on treason, must be determined by the law of England.

12. *Misprison of treason*, from *meprendre*, is the overlooking or concealing of treason. It is inferred by one's bare knowledge of the crime, and not discovering it to a magistrate or other person entitled by his office to take examination; though he should not in the least degree assent to it. The forenamed act 7 Ann. makes the English law of misprison ours. Its punishment is, by the law of England, perpetual imprisonment, together with the forfeiture of the offender's moveables, and of the profits of his heritable estate, during his life; that is, in the style of our law, his single and lierent escheat.

13. The crime of *sedition* consists in the raising commotions or disturbances in the state. It is either verbal or real. Verbal sedition, or leasing-making, is inferred from the uttering of words tending to create discord between the king and his people. It is punished either by imprisonment, fine, or banishment, at the discretion of the judge. Real sedition is generally committed by convocating together any considerable number of people, without lawful authority, under the pretence of redressing some public grievance, to the disturbing of the public peace. Those who are convicted of this crime are punished by the confiscation of their goods; and their lives are at the king's will. If any persons, to the number of 12, shall assemble, and being required by a magistrate or constable to disperse, shall nevertheless continue together for an hour after such command, the persons disobeying shall suffer death and confiscation of moveables.

14. Judges, who, wilfully or through corruption, use their authority as a cover to injustice or oppression, are punished with the loss of honour, fame and dignity. Under this head may be called *theftbote* (from *bote*, "compensation"), which is the taking a consideration in money or goods from a thief to exempt him from punishment, or connive at his escape from justice. A sheriff or other judge, guilty of this crime, forfeits his life and goods. And even a private person, who takes *theftbote*, suffers as the principal thief. The buying of disputed claims, concerning which there is a pending process, by any judge or member either of the session or of an inferior court, is punished by the loss of the delinquent's office, and all the privileges thereto belonging.

15. *Deforcement* is the opposition given, or resistance made, to messengers or other officers, while they are employed in executing the law. The court of session is competent to this crime. It is punishable with the confiscation of moveables, the one half to the king, and the other to the creditor at whose suit the diligence

Scotland.

was used. Armed persons, to the number of three or more, assisting in the illegal running, landing, or exporting of prohibited or uncustomed goods, or any who shall resist, wound, or maim any officer of the revenue, in the execution of his office, are punishable with death and the confiscation of moveables.

Breach of
arrestment.

16. *Breach of arrestment* (see N^o lxxviii. 5.) is a crime of the same nature with deforcement, as it imports a contempt of the law and of our judges. It subjects to an arbitrary corporal punishment, and the escheat of moveables; with a preference to the creditor for his debt, and for such farther sum as shall be modified to him by the judge. Under this head of crimes against good government and police, may be reckoned the *forestalling of markets*; that is, the buying of goods intended for a public market, before they are carried there; which for the third criminal act infers the escheat of moveables; as also slaying salmon in forbidden time, destroying plough graith in time of tillage, slaying or houghing horses or cows in time of harvest, and destroying or spoiling growing timber; as to the punishment of which, see statutes 1503. c. 72. — 1587, c. 82. and 1689, c. 16.—1. Geo. I. St. 2. c. 48.

Forestalling, &c.

Murder.

17. Crimes against particular persons may be directed either against life, limb, liberty, chastity, goods, or reputation. *Murder* is the wilful taking away of a person's life, without a necessary cause. Our law makes no distinction betwixt premeditated and sudden homicide: both are punished capitally. Casual homicide, where the actor is in some degree blameable; and homicide in self-defence, where the just bounds of defence have been exceeded; are punished arbitrarily: but the slaughter of night thieves, housebreakers, assistants in masterful depredations, or rebels denounced for capital crimes, may be committed with impunity. The crime of *demenbration*, or the cutting off a member, is joined with that of murder; but in practice its punishment has been restricted to the escheat of moveables, and an assythment or indemnification to the party. *Mutilation*, or the disabling of a member, is punished at the discretion of the judge.

Self-murder.

18. *Self-murder* is as highly criminal as the killing our neighbour; and for this reason, our law has, contrary to the rule, *crimina morte extinguuntur*, allowed a proof of the crime, after the offender's death, that his single escheat might fall to the king or his donatory. To this end, an action must be brought, not before the judiciary, but the session, because it is only intended *ad civilem effectum*, for proving and declaring the self-murder; and the next of kin to the deceased must be made a party to it.

Parricide.

19. The punishment of parricide, or of the murder of a parent, is not confined, by our law, to the criminal himself. All his posterity in the right line are declared incapable of inheriting; and the succession devolves on the next collateral heir. Even the cursing or beating of a parent infers death, if the person guilty be above 16 years; and an arbitrary punishment, if he be under it. A presumptive or statutory murder is constituted by 1690, c. 21. by which any woman who shall conceal her pregnancy, during its whole course, and shall not call for, or make use of, help in the birth, is to be reputed the murderer, if the child be dead, or amissing. This act was intended to dis-

courage the unnatural practice of women making away with their children begotten in fornication, to avoid church censures.

Law of
Scotland

20. *Duelling*, is the crime of fighting in single combat, on previous challenges given and received. Fighting in a duel, without license from the king, is punishable by death; and whatever person, principal or second, shall give a challenge to fight a duel, or shall accept a challenge, or otherwise engage therein, is punished by banishment and escheat of moveables, though no actual fighting should ensue.

Duelling.

21. *Haimfueken* from *haim* "home," and *socken* "to Haimfueck or pursue") is the assaulting or beating of a person in his own house. The punishment of this crime is nowhere defined, except in the books of the Majesty, which makes it the same as that of a rape; and it is, like rape, capital by our practice. The assault must be made in the proper house of the person assaulted, where he lies and rises daily and nightly; so that neither a public house, nor even a private, where one is only transiently, falls within the law.

Ken.

22. Any party to a law suit, who shall slay, wound, or otherwise invade his adversary, at any period of time between executing the summons and the complete execution of the decree, or shall be accessory to such invasion, shall lose his cause. The sentence pronounced on this trial, against him who has committed the battery, is not subject to reduction, either on the head of minority, or on any other ground whatever: and if the person prosecuted for this crime shall be denounced for not appearing, his liferent, as well as single escheat, falls upon the denunciation.

Battery.

23. The crime of *wrongous imprisonment* is inferred, by granting warrants of commitment in order to trial, proceeding on informations not subscribed, or without expressing the cause of commitment; by receiving or detaining prisoners on such warrants; by refusing to a prisoner a copy of the warrant of commitment; by detaining him in close confinement, above eight days after his commitment; by not releasing him on bail, where the crime is bailable; and by transporting persons out of the kingdom, without either their own consent, or a lawful sentence. The persons guilty of a wrongous imprisonment are punished by a pecuniary mulct, from 6000l. down to 400l. Scots, according to the rank of the person detained; and the judge, or other person guilty, is over and above subjected to pay to the person detained a certain sum *per diem* proportioned to his rank, and is declared incapable of public trust. All these penalties may be insisted for by a summary action before the session, and are subject to no modification.

Wrongous
imprisonment.

24. *Adultery*, is the crime by which the marriage bed is polluted. This crime could neither by the Roman nor Jewish law be committed, but where the guilty woman was the wife of another: by ours, it is adultery, if either the man or woman be married. We distinguish between simple adultery, and that which is notorious or manifest. Open and manifest adulterers, who continue incorrigible, notwithstanding the censures of the church, are punished capitally. This crime is distinguished by one or other of the following characters: where there is issue procreated between the adulterers; or where they keep bed and company together notoriously; or where they give scandal to the

Adultery.

Law of
Scotland.

the church, and are, upon their obstinate refusing to listen to its admonitions, excommunicated. The punishment of simple adultery, not being defined by statute, is left to the discretion of the judge; but custom has made the falling of the single escheat one of its penalties.

Bigamy.

25. *Bigamy* is a person's entering into the engagements of a second marriage, in violation of a former marriage vow still subsisting. Bigamy, on the part of the man, has been tolerated in many states, before the establishment of Christianity, even by the Jews themselves; but it is prohibited by the precepts of the gospel, and it is punished by our law, whether on the part of the man or of the woman, with the pains of perjury.

incest.

26. *Incest*, is committed by persons who stand within the degrees of kindred forbidden in Lev. xviii. and is punished capitally. The same degrees are prohibited in affinity, as in consanguinity, Lev. xviii. 13. *et seq.* As this crime is repugnant to nature, all children, whether lawful or natural, stand on an equal footing: *civilis ratio civilia jura corrumpere potest, non vero naturalia*. It is difficult indeed to bring a legal proof of a relation merely natural, on the side of the father; but the mother may be certainly known without marriage.

ape.

27. There is no explicit statute making rape, or the ravishing of women, capital; but it is plainly supposed in act 1612, c. 4. by which the ravisher is exempted from the pains of death, only in the case of the woman's subsequent consent, or her declaration that she went off with him of her own free will; and even then, he is to suffer an arbitrary punishment, either by imprisonment, confiscation of goods, or a pecuniary fine.

Theft.

28. *Theft* is defined, A fraudulent intermeddling with the property of another, with a view of making gain. Our ancient law proportioned the punishment of the theft to the value of the goods stolen; heightening it gradually, from a slight corporal punishment to a capital, if the value amounted to thirty-two pennies Scots, which in the reign of David I. was the price of two sheep. In several latter acts, it is taken for granted, that this crime is capital. But where the thing stolen is of small value, we consider it not as theft but as pickery, which is punished either corporally or by banishment. The breaking of orchards, and the stealing of green wood, is punished by a fine, which rises as the crime is repeated.

effect of
theft.

29. Theft may be aggravated into a capital crime, though the value of the thing stolen be trifling; as theft twice repeated, or committed in the night, or by landed men; or of things set apart for sacred uses. The receivers and concealers of stolen goods, knowing them to be such, suffer as thieves. Those who barely harbour the person of the criminal within 48 hours either before or after committing the crime, are punished as partakers of the theft. Such as sell goods belonging to thieves or lawless persons who dare not themselves come to market, are punished with banishment and the escheat of moveables.

robbery,
c.

30. Theft attended with violence is called *robbery*; and in our old statutes, *rief* or *stouthrief*; under which class may be included *forming*, or the taking of meat and drink by force, without paying for it. *Stouthrief* came at last to be committed so audaciously, by bands of men

affiliated together, that it was thought necessary to vest all our freeholders with a power of holding courts upon forners and rievvers, and condemning them to death. Nay, all were capitally punished, who, to secure their lands from depredation, paid to the rievvers a yearly contribution, which got the name of *black mail*. An act also passed, commanding to banishment a band of forners, who were originally from *Egypt*, called *gyffies*, and adjudging to death all that should be reputed *Egyptians*, if found thereafter within the kingdom. Robbery committed on the seas is called *piracy*, and is punished capitally by the high admiral. Several of the facts which constitute this crime are set forth in a British statute, 8 Geo. I. c. 24.

Law of
Scotland.

31. *Falseness*, in a large sense, is the fraudulent imitation or suppression of truth, to the damage of another. The lives and goods of persons convicted of using false weights or measures were, by our old law, in the king's mercy: and their heirs could not inherit but upon a remission. The latest statute against this crime punishes it by confiscation of moveables. That particular species of falseness, which consists in the falsifying of writings, passes by the name of *forgery*. Our practice has now of a long time, agreeably to the Roman law, made this crime capital; unless the forgery be of executions, or other writings of smaller moment; in which case, it is punished arbitrarily.

Falseness.

Forgery.

32. The writing must not only be fabricated, but put to use or founded on, in order to infer this crime. And though it be strictly criminal, yet the trial of it is proper to the court of session; but where improbation is moved against a deed by way of exception, the inferior judge, before whom the action lies, is competent to it *ad civilem effectum*. When it is pleaded as an exception, our practice, to discourage affected delays, obliges the defender, who moves it, to consign 40l. Scots; which he forfeits, if his plea shall appear calumnious.

33. Where a person, found guilty of forgery by the court of session is by them remitted to the judiciary, an indictment is there exhibited against him, and a jury sworn, before whom the decree of session is produced, in place of all other evidence of the crime, in respect of which the jury find the pannel guilty; so that that decree being pronounced by a competent court, is held as full proof, or, in the style of the bar, as *probatio probata*.

34. *Perjury*, which is the judicial affirmation of a Perjury. falseness on oath, really constitutes the *crimen falsi*; for he who is guilty of it does, in the most solemn manner, substitute falseness in the place of truth. To constitute this crime, the violation of truth must be deliberately intended by the swearer; and therefore reasonable allowances ought to be given to forgetfulness or misapprehension, according to his age, health, and other circumstances. The breach of a promissory oath does not infer this crime; for he who promises on oath may sincerely intend performance when he swears, and so cannot be said to call on God to attest a falseness. Though an oath, however false, if made upon reference in a civil question, concludes the cause, the person perjured is liable to a criminal trial; for the effect of the reference can go no further than the private right of the parties.

35. Notwithstanding the mischievous consequences

Law of
Scotland.

of perjury to society, it is not punished capitally, but by confiscation of moveables, imprisonment for a year, and infamy. The court of session is competent to perjury *incidenter*, when, in any examination upon oath, taken in a cause depending before them, a person appears to have sworn falsely: but in the common case, that trial is proper to the judiciary. *Subornation of perjury* consists in tampering with persons who are to swear in judgement, by directing them how they are to depose: and it is punished with the pains of perjury.

Stellionate.

36. The crime of *stellionate*, from *stellio*, includes every fraud which is not distinguished by a special name; but is chiefly applied to conveyances of the same numerical right, granted by the proprietor to different dispoonees. The punishment of stellionate must necessarily be arbitrary, to adapt it to the various natures and different aggravations of the fraudulent acts. The persons guilty of that kind of it, which consists in granting double conveyances, are by our law declared infamous, and their lives and goods at the king's mercy. The cognizance of *fraudulent bankruptcy* is appropriated to the court of session, who may inflict any punishment on the offender that appears proportioned to his guilt, death excepted,

Usury.

37. The crime of *usury*, before the Reformation, consisted in the taking of any interest for the use of money; and now in taking a higher rate of interest than is authorized by law. It is divided into *usura manifesta*, or direct; and *velata*, or covered. One may be guilty of the first kind, either where he covenants with the debtor for more than the lawful interest on the loan-money: or where one receives the interest of a sum before it is due, since thereby he takes a consideration of the use of money before the debtor has really got the use of it. Where a debt is clogged with an uncertain condition, by which the creditor runs the hazard of losing his sum, he may covenant for a higher interest than the legal, without the crime of usury: for there the interest is not given merely in consideration of the use of the money, but of the danger undertaken by the creditor.

38. Covered usury, is that which is committed under the mask, not of a loan, but of some other contract; e. g. a sale or an improper wadset. And in general, all obligations entered into with an intention of getting more than the legal interest for the use of money, however they may be disguised, are usurious. As a farther guard against this crime, the taking more than the legal interest for the forbearance of payment of money, merchandise, or other commodities, by way of loan, exchange, or other contrivance whatever, or the taking a bribe for the loan of money, or for delaying its payment when lent, is declared usury. Where usury is proved, the usurious obligation is not only declared void, but the creditor, if he has received any unlawful profits, forfeits the treble value of the sums or goods lent. Usury when it is to be pursued criminally, must be tried by the judiciary: but where the libel concludes only for voiding the debt, or restitution, the session is the proper court.

Injury.

39. *Injury*, in its proper acceptation, is the reproaching or affronting our neighbour. Injuries are either verbal or real. A verbal injury, when directed against a private person, consists in the uttering contu-

melious words, which tend to expose our neighbour's character by making him little or ridiculous. It does not seem that the twitting one with natural defects without any sarcastical reflections, though it be inhuman, falls under this description, as these imply no real reproach in the just opinion of mankind. Where the injurious expressions have a tendency to blacken one's moral character, or fix some particular guilt upon him, and are deliberately repeated in different companies, or handed about in whispers to confidants, it then grows up to the crime of slander: and where a person's moral character is thus attacked, the *animus injuriandi* is commonly inferred from the injurious words themselves, unless special circumstances be offered to take off the presumption, *ex gr.* that the words were uttered in judgement in one's own defence, or by way of information to a magistrate, and had some foundation in fact. Though the cognizance of slander is proper to the commissaries, who, as the *judices Christianitatis*, are the only judges of scandal; yet, for some time past, bare verbal injuries have been tried by other criminal judges, and even by the session. It is punished either by a fine, proportioned to the condition of the persons injuring and injured, and the circumstances of time and place; or if the injury import scandal, by publicly acknowledging the offence; and frequently the two are conjoined. The calling one a bankrupt is not, in strict speech, a verbal injury, as it does not affect the person's moral character; yet, as it may hurt his credit in the way of business, it founds him in an action of damages, which must be brought before the judge-ordinary. A real injury is inflicted by any fact, by which a person's honour or dignity is affected; as striking one with a cane, or even aiming a blow without striking; spitting in one's face; assuming a coat of arms, or any other mark of distinction proper to another, &c. The composing and publishing defamatory libels may be reckoned of this kind. Real injuries are tried by the judge-ordinary, and punished either by fine or imprisonment, according to the demerit of the offenders.

40. After having shortly explained the several crimes punishable by our law, this treatise may be concluded with a few observations on criminal jurisdiction, the forms of trial, and the methods by which crimes may be extinguished. Criminal jurisdiction is founded, 1. *Ratione domicilii*, if the defender dwells within the territory of the judge. Vagabonds, who have no certain *domicile*, may be tried wherever they are apprehended. 2. *Ratione delicti*, if the crime was committed within the territory. Treason is triable, by the English law, in any county that the king should appoint; and, by a temporary act now expired, treason committed in certain Scots counties was made triable by the court of judiciary, wherever it should sit.

41. No criminal trial can proceed, unless the person accused is capable of making his defence. Absents therefore cannot be tried; nor fatuous nor furious persons, *durante furore*, even for crimes committed while they were in their senses. For a like reason, minors who had no curators, could not, by the Roman law, be tried criminally; but our practice considers every person who is capable of dole, to be also sufficiently qualified for making his defence in a criminal trial.

42. No person can be imprisoned in order to stand trial.

Law of
Scotland.Criminal
jurisdiction.What persons are
triable.

Commitment.

trial for any crime, without a warrant in writing expressing the cause, and proceeding upon a subscribed information, unless in the case of indignities done to judges, riots, and the other offences specially mentioned in 1701, c. 6. Every prisoner committed in order to trial, if the crime of which he is accused be not capital, is entitled to be released upon bail, the extent of which is to be modified by the judge, not exceeding 12,000 merks Scots for a nobleman, 6000 for a landed gentleman, 2000 for every other gentleman or burgess, and 600 for any other inferior person. That persons who, either from the nature of the crime with which they are charged, or from their low circumstances, cannot procure bail, may not lie for ever in prison untried, it is lawful for every such prisoner to apply to the criminal judge, that his trial may be brought on. The judge must, within 24 hours after such application, issue letters directed to messengers, for intimating to the prosecutor to fix a diet for the prisoner's trial, within 60 days after the intimation, under the pain of wrongous imprisonment: And if the prosecutor does not insist within that time, or if the trial is not finished in forty days more when carried on before the justiciary, or in thirty when before any other judge; the prisoner is, upon a second application, setting forth that the legal time is elapsed, entitled to his freedom, under the same penalty.

43. Upon one's committing any of the grosser crimes, it is usual for a justice of the peace, sheriff, or other judge, to take a precognition of the facts, i. e. to examine those who were present at the criminal act, upon the special circumstances attending it, in order to know whether there is ground for a trial, and to serve as a direction to the prosecutor, how to set forth the facts in the libel; but the persons examined may insist to have their declarations cancelled before they give testimony at the trial. Justices of the peace, sheriffs, and magistrates of boroughs, are also authorized to receive informations, concerning crimes to be tried in the circuit-courts; which informations are to be transmitted to the justice-clerk 40 days before the sitting of the respective courts. To discourage groundless criminal trials, all prosecutors, where the defender was absolved, were condemned by statute, in costs, as they should be modified by the judge, and besides were subjected to a small fine, to be divided between the fisc and the defender: And where the king's advocate was the only pursuer, his informer was made liable. This sufficiently warrants the present practice of condemning vexatious prosecutors in a pecuniary mulct, though far exceeding the statutory sum.

44. The forms upon trial in criminal accusations, differ much from those observed in civil actions, if we except the case of such crimes as the court of session is competent to, and of lesser offences tried before inferior courts. The trial of crimes proceeds either upon indictment, which is sometimes used when the person to be tried is in prison; or by criminal letters issuing from the signet of the justiciary. In either case, the defender must be served with a full copy of the indictment or letters, and with a list of the witnesses to be brought against him, and of the persons who are to pass on the inquest, and 15 free days must intervene between his being so served and the day of appearance.

When the trial proceeds upon criminal letters, the private prosecutor must give security, at raising the letters, that he will report them duly executed to the justiciary, in terms of 1535, c. 35.; and the defender, if he be not already in prison, is, by the letters, required to give caution, within a certain number of days after his citation, for his appearance upon the day fixed for his trial: And if he gives none within the days of the charge, he may be denounced rebel, which infers the forfeiture of his moveables.

45. That part of the indictment, or of the criminal letters, which contains the ground of the charge against the defender, and the nature or degree of the punishment he ought to suffer, is called the *libel*. All libels must be special, setting forth the particular facts inferring the guilt, and the particular place where these facts were done. The time of committing the crime may be libelled in more general terms, with an alternative as to the month, or day of the month: but as it is not practicable, in most cases, to libel upon the precise circumstances of accession that may appear in proof, libels against accessories are sufficient, if they mention, in general, that the persons prosecuted are guilty art and part.

46. The defender in a criminal trial may raise letters of exculpation, for citing witnesses in proof of his defences against the libel, or of his objections against any of the jury or witnesses; which must be executed to the same day of appearance with that of the indictment or criminal letters.

47. The diets of appearance, in the court of justiciary, are peremptory: the criminal letters must be called on the very day on which the defender is cited: and hence, if no accuser appears, their effect is lost, *instantia perit*, and new letters must be raised. If the libel, or any of the executions, shall to the prosecutor appear informal, or if he be diffident of the proof, from the absconding of a necessary witness, the court will, upon a motion made by him, desert the diet *pro loco et tempore*; after which new letters become also necessary. A defender, who does not appear on the very day to which he is cited, is declared fugitive; in consequence of which his single escheat falls. The defender, after his appearance in court is called the *panel*.

48. The two things to be chiefly regarded in a criminal libel, are, 1. The relevancy of the facts, i. e. their sufficiency to infer the conclusion; 2. Their truth. The consideration of the first belongs to the judge of the court; that of the other, to the jury or assize. If the facts libelled be found irrelevant, the panel is dismissed from the bar; if relevant, the court remits the proof thereof to be determined by the jury; which must consist of 15 men picked out by the court from a greater number, not exceeding 45, who have been all summoned, and given in list to the defender at serving him with a copy of the libel.

49. Crimes cannot, like debts, be referred to the defender's oath; for no person is compellable to swear against himself, where his life, limb, liberty, or estate is concerned, nor even in crimes which infer infamy; because one's good name is, in right estimation, as valuable as his life. There is one exception however to this rule in trying the crime of usury, which may be proved

Law of
Scotland.

proved by the usurer's own oath, notwithstanding the rule, *Nemo tenetur jurare in suam turpitudinem*. Crimes therefore are in the general case proveable only by the defender's free confession, or by writing, or by witnesses. No extrajudicial confession, unless it is adhered to by the pannel in judgement, can be admitted as evidence.

Socii criminis.

50. All objections relevant against a witness in civil cases are also relevant in criminal. No witness is admitted, who may gain or lose by the event of the trial. *Socii criminis*, or associates in the same crime, are not admitted against one another, except either in crimes against the state, as treason; in occult crimes, where other witnesses cannot be had, as forgery; or in thefts or depredations committed in the Highlands. The testimony of the private party injured may be received against the pannel, where the king's advocate is the only prosecutor, if from the nature of the crime, there must needs be a penury of witnesses, as in rape, robbery, &c.

Verdict of
a jury.

51. After all the witnesses have been examined in court, the jury are shut up in a room by themselves, where they must continue, excluded from all correspondence, till their verdict or judgement be subscribed by the foreman (or chancellor) and clerk; and according to this verdict the court pronounces sentence, either absolving or condemning. It is not necessary, by the law of Scotland, that a jury should be unanimous in finding a person guilty; the narrowest majority is as sufficient against the pannel, as for him. Juries cannot be punished on account of an erroneous verdict, either for or against the pannel.

Powers of
a jury.

52. Though the proper business of a jury be to inquire into the truth of the facts found relevant by the court, for which reason they are sometimes called the *inquest*; yet, in many cases, they judge also in matters of law or relevancy. Thus, though an objection against a witness should be repelled by the court, the jury are under no necessity to give more credit to his testimony than they think just: And in all trials of art and part, where special facts are not libelled, the jury, if they return a general verdict, are indeed judges not only of the truth, but the relevancy of the facts that are sworn to by the witnesses. A general verdict, is that which finds in general terms, that the pannel is guilty or not guilty, or that the libel or defences are proved or not proved. In a special verdict, the jury finds certain facts proved, the import of which is to be afterwards considered by the court.

Sentences.

53. Criminal judges must now suspend for some time the execution of such sentences as affect life or limb, that so condemned criminals, whose cases deserve favour, may have access to apply to the king for mercy. No sentence of any court of judicature, south of the river Forth, importing either death or demembration, can be executed in less than 30 days; and, if north of it in less than 40 days, after the date of the sentence. But corporal punishments, less than death or dismembering, e. g. whipping, pillory, &c. may be inflicted eight days after sentence on this side Forth, and twelve days after sentence beyond it.

Extinction
of crimes.

54. Crimes are extinguished, 1. By the death of the criminal: both because a dead person can make

no defence, so that his trial is truly a judging upon the hearing of one side; and because, though his guilt should be ever so notorious, he is after death carried beyond the reach of human penalties: Such trials therefore can have no effect, but to punish the innocent heir, contrary to that most equitable rule, *Culpa tenet suos auctores*. 2. Crimes may be extinguished by a remission from the sovereign. But a remission, though it secures the delinquent from the public resentment, the exercise of which belongs to the crown, cannot cut off the party injured from his claim of damages, over which the crown has no prerogative. Whoever therefore founds on a remission, is liable in damages, to the private prosecutor, in the same manner as if he had been tried and found guilty. Even general acts of indemnity passed in parliament, though they secure against such penalties as law inflicts upon the criminal merely *per modum pene*, yet do not against the payment of any pecuniary fine that is given by statute to the party injured, nor against the demand of any claim competent to him in name of damages.

55. Lesser injuries, which cannot be properly said to affect the public peace, may be extinguished, either by the private party's expressly forgiving him, or by his being reconciled to the offender, after receiving the injury. Hence arises the rule, *Disimulatione tollitur injuria*. But where the offence is of a higher nature, the party injured, though he may pass from the prosecution, in so far as his private interest is concerned, cannot preclude the king's advocate, or procurator-fiscal, from insisting *ad vindictam publicam*.

56. Crimes are also extinguished by prescription, which operates by the mere lapse of time, without any act either of the sovereign or of the private sufferer. Crimes prescribe in 20 years; but in particular crimes, the prescription is limited by statute to a shorter time. No person can be prosecuted upon the act against wrongous imprisonment, after three years. High treason, committed within his majesty's dominions, suffers likewise a triennial prescription, if indictment be not found against the traitor within that time. All actions brought upon any penal statute made or to be made, where the penalty is appropriated to the crown, expire in two years after committing the offence; and where the penalty goes to the crown or other prosecutor, the prosecutor must sue within one year, and the crown within two years after the year ended. Certain crimes are, without the aid of any statute, extinguished by a shorter prescription than twenty years. By our old law, in the cases of rape, robbery, and hamesucken, the party injured was not heard after a silence of twenty-four hours; from a presumption, that persons could not be so grossly injured, without immediately complaining: And it is probable, that a prosecution for these crimes, if delayed for any considerable time, would be cast even at this day, or at least the punishment restricted. Lesser injuries suffer also a short prescription; law *presuming* forgiveness, from the nature of the offence, and the silence of the party. The particular space of time sufficient to establish this presumption must be determined by the judge, according to circumstances.

Law
ScotlaPrescrip
tion.

Englishman (with a week's preparation) would understand the laws of Normandy, collected in their *grand coutumier*, as well, if not better, than a Frenchman bred within the walls of Paris.

The Latin, which succeeded the French for the entry and enrolment of pleas, and which continued in use for four centuries, answers so nearly to the English (oftentimes word for word) that it is not at all surprising it should generally be imagined to be totally fabricated at home, with little more art or trouble than by adding Roman terminations to English words. Whereas in reality it is a very universal dialect, spread throughout all Europe at the irruption of the northern nations; and particularly accommodated and moulded to answer all the purposes of the lawyers with a peculiar exactness and precision. This is principally owing to the simplicity, or (if the reader pleases) the poverty and baldness of its texture, calculated to express the ideas of mankind just as they arise in the human mind, without any rhetorical flourishes, or perplexed ornaments of style: for it may be observed, that those laws and ordinances, of public as well as private communities, are generally the most easily understood, where strength and perspicuity, not harmony or elegance of expression, have been principally consulted in compiling them. These northern nations, or rather their legislators, though they resolved to make use of the Latin tongue in promulgating their laws, as being more durable and more generally known to their conquered subjects than their own Teutonic dialects, yet (either through choice or necessity) have frequently intermixed therein some words of a Gothic original: which is, more or less, the case in every country of Europe, and therefore not to be imputed as any peculiar blemish in our English legal latinity. The truth is, what is generally denominated *law-Latin* is in reality a mere technical language, calculated for eternal duration, and easy to be apprehended both in present and future times; and on those accounts best suited to preserve those memorials which are intended for perpetual rules of action. The rude pyramids of Egypt have endured from the earliest ages, while the more modern and more elegant structures of Attica, Rome, and Palmyra, have sunk beneath the stroke of time.

As to the objection of locking up the law in a strange and unknown tongue, this is of little weight with regard to records; which few have occasion to read, but such as do, or ought to, understand the rudiments of Latin. And besides, it may be observed of the law-Latin, as the very ingenious Sir John Davis observes of the law-French, "that it is so very easy to be learned, that the meanest wit that ever came to the study of the law doth come to understand it almost perfectly in ten days without a reader."

It is true, indeed, that the many terms of art, with which the law abounds, are sufficiently harsh when Latinized (yet not more so than those of other sciences), and may, as Mr Selden observes, give offence "to some grammarians of squeamish stomachs, who would rather choose to live in ignorance of things the most useful and important, than to have their delicate ears wounded by the use of a word unknown to Cicero, Sallust, or the other writers of the Augustan age." Yet this is no more than must unavoidably happen when things of modern use, of which the Romans had no

idea, and consequently no phrases to express them, come to be delivered in the Latin tongue. It would puzzle the most classical scholar to find an appellation, in his pure Latinity, for a constable, a record, or a deed of feoffment: it is therefore to be imputed as much to necessity as ignorance, that they were styled in our forensic dialect, *constabularius*, *recordum*, and *feoffamentum*. Thus again, another uncouth word of our ancient laws (for I defend not the ridiculous barbarisms sometimes introduced by the ignorance of modern practisers), the substantive *murdrum*, or the verb *murdrare*, however harsh and unclassical it may seem, was necessarily framed to express a particular offence; since no other word in being, *occidere*, *interficere*, *necare*, or the like, was sufficient to express the intention of the criminal, or *quo animo* the act was perpetrated; and therefore by no means came up to the notion of murder at present entertained by law; viz. a killing *with malice aforethought*.

A similar necessity to this produced a similar effect at Byzantium, when the Roman laws were turned into Greek for the use of the oriental empire; for without any regard to Attic elegance, the lawyers of the imperial courts made no scruple to translate *fidei commissarios*, Φιδει κομισσαριους; *cubiculum*; κουβικλιον; *filiumfamilias*, παιδα-Φαμιλιας; *repudium*, ρεπυδιον; *compromissum*, κομπρομισσον; *reverentia et obsequium*, ρεσερεντια και οσσεκιον; and the like. They studied more the exact and precise import of the words, than the neatness and delicacy of their cadence. And it may be suggested, that the terms of the law are not more numerous, more uncouth, or more difficult to be explained by a teacher, than those of logic, physics, and the whole circle of Aristotle's philosophy; nay, even of the politer art of architecture and its kindred studies, or the science of rhetoric itself. Sir Thomas More's famous legal question contains in it nothing more difficult, than the definition which in his time the philosophers currently gave of their *materia prima*, the groundwork of all natural knowledge; that it is *neque quid, neque quantum, neque quale, neque aliquid eorum quibus ens determinatur*; or its subsequent explanation by Adrian Heereboard, who assures us, that *materia prima non est corpus, neque per formam corporeitatis, neque per simplicem essentiam: est tamen ens, et quidem substantia, licet incompleta; habetque actum ex se entitativum, et simul est potentia subjectiva*. The law, therefore, with regard to its technical phrases, stands upon the same footing with other studies, and requests only the same indulgence.

This technical Latin continued in use from the time of its first introduction, till the subversion of our ancient constitution under Cromwell: when, among many other innovations in the law, some for the better and some for the worse, the language of our records was altered and turned into English. But, at the restoration of King Charles, this novelty was no longer countenanced; the practisers finding it very difficult to express themselves so concisely or significantly in any other language but the Latin. And thus it continued without any sensible inconvenience till about the year 1730, when it was again thought proper that the proceedings at law should be done into English, and it was accordingly so ordered by statute 4 Geo II. c. 26. This was done, in order that the common people might have knowledge and understanding of what

was alleged or done for and against them in the process and pleadings, the judgment and entries in cause. Which purpose it is doubtful how well it has answered; but there is reason to suspect, that the people, are now, after many years experience, altogether as ignorant in matters of law as before. On the other hand, these inconveniences have already arisen from the alteration; that now many clerks and attorneys are hardly able to read, much less to understand, a record even of so modern a date as the reign of George I. And it has much enhanced the expence of all legal proceedings: for since the practisers are confined (for the sake of the stamp duties, which are thereby considerably increased) to write only a stated number of words in a sheet; and as the English language, through the multitude of its particles, is much more verbose than the Latin; it follows, that the number of sheets must be very much augmented by the change. The translation also of technical phrases, and the names of writs and other process, were found to be so very ridiculous (a writ of *nisi prius*, *quare impedit*, *fiat facias*, *habas corpus*, and the rest, not being capable of an English dress with any degree of seriousness), that in two years time a new act was obliged to be made, 6 Geo. II. c. 14. which allows all technical words to continue in the usual language, and has thereby defeated every beneficial purpose of the former statute.

Trial by Wager of Law, (*vadiatio legis*;) a species of trial, in the English law, so called, as another species is styled "wager of battel," *vadiatio duelli*, (see BATTLE); because, as in the wager of battel, the defendant gave a pledge, gage, or *vadium*, to try the cause by battel; so here he was to put in sureties or *vadios*, that at such a day he will make his law, that is, take the benefit which the law has allowed him. (See the article TRIAL). For our ancestors considered, that there were many cases where an innocent man, of good credit, might be overcome by a multitude of false witnesses; and therefore established this species of trial, by the oath of the defendant himself: for if he will absolutely swear himself not chargeable, and appears to be a person of reputation, he shall go free, and for ever acquitted of the debt, or other cause of action.

The manner of waging and making law is this. He that has waged, or given security to make his law, brings with him into court eleven of his neighbours: a custom which we find particularly described so early as in the league between Alfred and Guthrun the Dane; for by the old Saxon constitution every man's credit in courts of law depended upon the opinion which his neighbours had of his veracity. The defendant then, standing at the end of the bar, is admonished by the judges of the nature and danger of a false oath. And if he still persists, he is to repeat, this or the like oath: "Hear this, ye justices, that I do not owe unto Richard Jones the sum of ten pounds, nor any penny thereof, in manner and form as the said Richard hath declared against me. So help me God." And thereupon his eleven neighbours or compurgators shall avow upon their oaths, that they believe in their consciences that he saith the truth; so that himself must be sworn *de fidelitate*, and the eleven *de credulitate*.

In the old Swedish or Gothic constitution, wager

of law was not only permitted, as it is in *criminal* cases, unless the fact be extremely clear against the prisoner; but was also absolutely required, in many *civil* cases: which an author of their own very justly charges as being the source of frequent perjury. This, he tells us, was owing to the Popish ecclesiastics, who introduced this method of purgation from their canon law; and, having sown a plentiful crop of oaths in all judicial proceedings, reaped afterwards an ample harvest of perjuries: for perjuries were punished in part by pecuniary fines, payable to the coffers of the church. But with us in England wager of law is never required; and then only admitted, where an action is brought upon such matters as may be supposed to be privately transacted between the parties, and wherein the defendant may be presumed to have made satisfaction without being able to prove it. Therefore it is only in actions of debt upon simple contract, or for amercement, in actions of detinue, and of account, where the debt may have been paid, the goods restored, or the account balanced, without any evidence of either. And by such wager of law (when admitted) the plaintiff is perpetually barred; for the law, in the simplicity of the ancient times, presumed that no one would forswear himself for any worldly thing. Wager of law, however, lieth in a real action, where the tenant alleges he was not legally summoned to appear, as well as in mere personal contracts.

The wager of law was never permitted but where the defendant bore a fair and unrepachable character; and it was also confined to such cases where a debt might be supposed to be discharged, or satisfaction made in private, without any witnesses to attest it: and many other prudential restrictions accompanied this indulgence. But at length it was considered, that (even under all its restrictions) it threw too great a temptation in the way of indigent or profligate men: and therefore by degrees new remedies were devised, and new forms of action were introduced, wherein no defendant is at liberty to wage his law. So that now no plaintiff need at all apprehend any danger from the hardness of his debtor's conscience, unless he voluntarily chooses to rely on his adversary's veracity, by bringing an obsolete, instead of a modern action. Therefore, one shall hardly hear at present of an action of *debt* brought upon a simple contract: that being supplied by an action of *trespass on the case* for the breach of a promise or *assumpsit*; wherein, though the specific debt cannot be recovered, yet damages may, equivalent to the specific debt. And, this being an action of *trespass*, no law can be waged therein. So, instead of an action of *detinue* to recover the very thing detained, an action of *trespass on the case* in *trover and conversion* is usually brought; wherein, though the horse or other specific chattel cannot be had, yet the defendant shall pay damages for the conversion, equal to the value of the chattel; and for this *trespass* also no wager of law is allowed. In the room of actions of *account*, a bill in equity is usually filed: wherein, though the defendant answers upon his oath, yet such oath is not conclusive to the plaintiff; but he may prove every article by other evidence, in contradiction to what the defendant has sworn. So that wager of law is quite out of use, being avoided by the mode of bringing the action; but still it is not out of force.

And

And therefore, when a new statute inflicts a penalty, and gives an action of debt for recovering it, it is usual to add, "in which no wager of law shall be allowed:" otherwise a hardy delinquent might escape any penalty of the law, by swearing he had never incurred, or else had discharged it.

Custom-House Laws. The expedient of exacting duties on goods imported, or exported, has been adopted by every commercial nation in Europe. The attention of the British legislature has not been confined to the object of raising a revenue alone, but they have attempted by duties, exemptions, drawbacks, bounties, and other regulations, to direct the national trade into those channels that contribute most to the public benefit. And, in order to obtain every requisite information, all goods, exported or imported, whether liable to duty or not, are required to be entered at the respective custom-houses; and, from these entries, accounts are regularly made up of the whole British trade, distinguishing the articles, their quantity and value, and the countries which supply or receive them.

The objects of the British legislature may be reduced to the following heads.

First, To encourage the employment of British shipping and seamen, for the purpose of supplying our navy when public exigencies require.

Secondly, To increase the quantity of money in the nation, by prohibiting the exportation of British coin, by encouraging exportation, and discouraging importation, and by promoting agriculture, fisheries, and manufactures. For these purposes, it is penal to entice certain manufacturers abroad, or export the tools used in their manufactures: the exportation of raw materials is, in most instances, prohibited; and their importation permitted free from duty, and sometimes rewarded with a bounty. The exportation of some goods, manufactured to a certain length only (for example white cloth), is loaded with a duty, but permitted duty free when the manufacture is carried to its full extent. The importation of rival manufactures is loaded with heavy duties, or absolutely prohibited. These restrictions are most severe towards nations with which the balance of trade is supposed against us, or which are considered as our most formidable rivals in power or commerce. Upon this principle the commerce with France, till lately, laboured under the heaviest restrictions.

Thirdly, To secure us plenty of necessaries for subsistence and manufacture, by discouraging the exportation of some articles that consume by length of time, and regulating the corn trade according to the exigencies of the seasons.

Fourthly, To secure the trade of the colonies to the mother country, and preserve a mutual intercourse, by encouraging the produce of their staple commodities, and restraining their progress in these manufactures which they receive from us in exchange.

The foundation of our commercial regulations is the famous act of navigation, which was first enacted during the time of the Commonwealth, and adopted by the first parliament after the Restoration. The substance of this act, and subsequent amendments, is as follows:

1. Goods from Asia, Africa, and America, may not

be imported, except in British ships duly navigated, or ships belonging to the British plantations; and they can only be imported from the place of their production or manufacture, or the port where they are usually first shipped for transportation. Goods of the Spanish or Portuguese plantations, imported from Spain and Portugal in British ships, bullion, and some other inconsiderable articles, are excepted.

The restriction on European goods is not universal, but extends to several of the bulkiest articles. Russian goods, masts, timber, boards, salt, pitch, rosin, tar, hemp, flax, raisins, figs, prunes, olives, oil, corn, sugar, potashes, wine, and vinegar, may not be imported, except in ships belonging to Great Britain or Ireland, legally manned; nor Turkey goods and currants, except in ships British built; or in ships belonging to the country where these goods are produced or manufactured, or first shipped for exportation, and, if imported in foreign ships, they pay alien's duty.

In order to entitle a ship to the privileges of a British ship, it must be built in Britain, and belong entirely to British subjects; and the master, and three-fourths of the mariners, must be British subjects, except in case of death, or unavoidable accidents. In time of war, the proportion of British mariners required is generally confined to one-fourth; and the same proportion only is required in the Greenland fishery.

No goods may be imported into, or exported from, the plantations in Asia, Africa, or America, except in ships built in Britain, Ireland, or the plantations, or prize ships, manned by British subjects, duly registered, and legally navigated.

The following goods, enumerated in the act of navigation and subsequent acts, may not be exported from the plantations, except to some other plantation, or to Britain: Tobacco, cotton wool, indigo, ginger, fullic, and other dyeing wood, molasses, hemp, copper ore, beaver skins and other furs, pitch, tar, turpentine, masts, yards, and bolspirts, coffee, pimento, coconuts, whale fins, raw silk, pot and pearl ashes. Rice and sugar were formerly comprehended in this list, but their exportation is now permitted under certain restrictions.

Iron may not be imported to Europe, except to Ireland; and none of the non-enumerated may be imported to any country north of Cape Finisterre, except the bay of Biscay and Ireland.

2. For the more effectual prevention of smuggling, no goods may be imported in vessels belonging to British subjects; and no wine, in any vessel whatever, unless the master have a manifest on board, containing the name, measure, and built of the ship, the place to which it belongs, and a distinct enumeration of the goods on board, and places where they were laden. If the ship be cleared from any place under his majesty's dominions, the manifest must be attested by the chief officer of the customs, or chief magistrate, who is required to transmit a copy thereof to the place of destination. Shipmasters must deliver copies of this manifest to the first customhouse officer who goes on board within four leagues of the shore, and also to the first who goes on board within the limits of any port, and must deliver the original manifest to the customhouse at their arrival, and make report of their cargo

upon oath. If the report disagree with the manifest, or either disagree with the cargo on board, the ship-matter is liable in the penalty of 200*l.* The proprietors of the goods must enter them, and pay the duties within 20 days; otherwise they may be carried to the customhouse, and sold by auction, if not relieved within six months; and the overplus of the value, after paying duty and charges, paid to the proprietors.

3. The importation of cattle, beef, mutton, and pork, except from Ireland, woollen cloths, malt, and various articles of hardware, cutlery, and earthen ware, is prohibited: Also the following goods from Germany and the Netherlands; olive oil, pitch, tar, potashes, rosin, salt, tobacco, wines, except Rhenish wine, and Hungary wines from Hamburg.

4. The importation of various other goods is restricted by particular regulations, respecting the time and place of importation, the packages, the burden of the ship, the requisition of a license, and other circumstances.

To guard more effectually against clandestine trade, the importation of some articles is only permitted in ships of a certain burden, whose operations are not easily concealed. Spirits must be imported in ships of 100 tons or upwards, except rum, and spirits of British plantations, which are only restricted to 70 tons; wine, 60 tons; tea, tobacco, and snuff, 50 tons; salt, 40 tons. Wine, spirits, and tobacco are also restricted in respect of the packages in which they may be imported.

5. Diamonds and precious stones, flax, flax seed, linen rags, beaver wool, wool for clothiers, linen yarn unbleached, and most drugs used in dyeing, may be imported duty free.

6. All goods imported are liable to duties, except such as are expressly exempted. The revenue of customs is of great antiquity in Britain, but was remodelled at the restoration of Charles II. A subsidy of tonnage on wines, and of poundage, or 1*s.* per pound value of other goods, was granted during the king's life, and, after several prolongations, rendered perpetual. A book of rates was composed for ascertaining these values; and articles not rated paid duty according to the value, as affirmed upon oath by the importer. If the goods be valued too low by the importer, the customhouse officer may seize them, upon paying to the proprietor the value he swore to, and 10 per cent. for profit; such goods to be sold, and the overplus paid into the customs. Various additional duties have been imposed; some on all goods, some on particular kinds; some according to the rates, some unconnected with the rates; some with an allowance of certain abatements, some without any allowance; the greater part to be paid down in ready money, and a few for which security may be granted; often with variations, according to the ship's place and circumstances of importation. The number of branches amounted to upwards of 50; and sometimes more than 10 were chargeable on the same articles. By this means, the revenue of the customs has become a subject of much intricacy. The inconveniences which this gave rise to are now removed by the consolidation act; which appoints one fixed duty for each ar-

ticle free from fractions, instead of the various branches to which they were formerly subject.

7. Goods of most kinds may be exported duty free when regularly entered; and those that have paid duty on importation are generally entitled to drawback of part, sometimes of the whole, when re-exported within three years, upon certificate that the duties were paid on importation, and oath of their identity. In some cases, a bounty is given on manufactured goods, when the materials from which they are manufactured have paid duty on importation; and manufactures subject to excise, have generally the whole or part of the excise duties returned.

8. The following goods are prohibited to be exported; white ashes, horns, unwrought hides of black cattle, tallow, corn, brass, copper, engines for knitting stockings, tools for cotton, linen, woollen, silk, iron and steel manufactures, wool, woolfells, woollen yarn, fullers earth, fulling clay, and tobacco-pipe clay.

9. The object of the laws respecting the corn trade is to encourage agriculture, by not only permitting the free exportation, but rewarding it with a bounty when the prices are low, and checking the importation by a heavy duty; and to prevent scarcity, by prohibiting the exportation when the prices are high, and permitting importation at an easy duty. Various temporary laws have been enacted for these purposes, and sometimes other expedients employed in times of scarcity, such as prohibiting the distillery from corn, and manufacture of starch.

10. Bounties are allowed on the exportation of refined sugar, sail-cloth, linen under limited prices, silk stuffs of British manufacture, cordage, spirits when barley is under 2*s.* beef, pork, and the following kinds of fish, salmon, herrings, pilchards, cod, ling, flake, and sprats.

Various other bounties are allowed for the encouragement of our fisheries. Ships from 150 to 300 tons employed in the Greenland whale fishery, and conforming to the regulations prescribed, are allowed 30*s.* per ton. Vessels employed in the herring fishery receive 20*s.* per ton, besides a bounty on the herrings caught and cured, amounting in some cases to 4*s.* per barrel. Other bounties are granted to a limited number of the most successful vessels employed in the herring and Newfoundland fisheries, and in the southern whale fishery.

It is unnecessary and impracticable, in this place, to enter into a full detail of our customhouse laws. Indeed, all that can be admitted into a work of this kind, must convey but very imperfect information; and even that little becomes useless in a short time from alterations in the law. We have therefore only marked the general outlines in the present article; which, however, will be sufficient to enable the reader to judge of the principles upon which the British legislature has acted. How far the means employed have contributed to the ends proposed, and how far the ends themselves are always wise; or whether a trade encumbered by fewer restrictions would not prove more extensive and beneficial; has often been a subject of discussion.

Mercantile Laws. The laws relating to commercial and

and maritime affairs approach nearer to uniformity through the different countries of Europe, than those on other subjects. Some of the fundamental regulations have been taken from the Roman law; others have been suggested by experience, during the progress of commerce; and the whole have been gradually reduced to a system, and adopted into the laws of trading nations, but with some local varieties and exceptions.

The British legislature has enacted many statutes respecting commerce; yet the greater part of our mercantile law is to be collected from the decisions of our courts of justice, founded on the custom of merchants. A proof of such custom, where no direct statute interferes, determines the controversy, and becomes a precedent for regulating like cases afterwards. The existence of a custom not formerly recognized, is, in England, determined by a jury of merchants.

The most common mercantile contracts are those between buyer and seller; between factor and employer; between partners; between the owners, masters, mariners, and freighters of ships; between insurers and the owners of the subject insured; and between the parties concerned in transacting bills of exchange. See FACTORAGE, SALE, PARTNERSHIP, INSURANCE, BILL, &c. and the next article.

Maritime Laws. The most ancient system of maritime laws is that of Rhodes, which was in force during the time of the Grecian empire, and afterwards incorporated into the Roman law. Although, in some parts, not applicable to the present state of trade, and, in others, now hardly intelligible, it contains the groundwork of the most equitable and beneficial rules observed in modern commerce. A like system was set forth by Richard I. of England, called the *Statutes of Oleron*; and another, by the town of Wisby, in the island of Gothland. From these systems, improved and enlarged in the course of time, our general maritime law is derived. The jurisdiction of matters purely maritime belongs, in England, to the court of admiralty, which proceeds on the civil law; but their proceedings are subject to the controul, and their decisions to the review, of the superior courts.

We shall here consider the obligations which subsist between the masters or owners of ships, the freighters, and the furnishers of provisions or repairs.

1. *Masters and Freighters.* A charter party is a contract between the master and freighters, in which the ship and voyage is described, and the time and conditions of performing it are ascertained.

The freight is most frequently determined for the whole voyage, without respect to time. Sometimes it depends on the time.

In the former case, it is either fixed at a certain sum for the whole cargo; or so much per ton, barrel bulk, or other weight or measure; or so much per cent. on the value of the cargo. This last is common on goods sent to America; and the invoices are produced to ascertain the value.

The burden of the ship is generally mentioned in the contract, in this manner, *one hundred tons, or thereby*; and the number mentioned ought not to differ above 5 tons, at most, from the exact measure. If a certain sum be agreed on for the freight of the ship, it must all be paid, although the ship, when measured, should

prove less, unless the burden be warranted. If the ship be freighted for transporting cattle, or slaves, at so much a head, and some of them die on the passage, freight is only due for such as are delivered alive; but, if for lading them, it is due for all that were put on board.

When a whole ship is freighted, if the master suffers any other goods besides those of the freighter to be put on board, he is liable for damages.

It is common to mention the number of days that the ship shall continue at each port to load or unload. The expression used is, *work weather days*; to signify, that Sundays, holidays, and days when the weather stops the work, are not reckoned. If the ship be detained longer, a daily allowance is often agreed on, in name of *demurrage*.

If the voyage be completed in terms of the agreement, without any misfortune, the master has a right to demand payment of the freight before he delivers the goods. But if the safe delivery be prevented by any fault or accident, the parties are liable, according to the following rules.

If the merchant do not load the ship within the time agreed on, the master may engage with another, and recover damages.

If the merchant load the ship, and recal it after it has set sail, he must pay the whole freight; but if he unload it before it sets sail, he is liable for damages only.

If a merchant loads goods which it is not lawful to export, and the ship be prevented from proceeding on that account, he must pay the freight notwithstanding.

If the shipmaster be not ready to proceed on the voyage at the time agreed on, the merchant may load the whole, or part of the cargo, on board another ship, and recover damages; but chance, or notorious accident, by the marine law, releases the master from damages.

If an embargo be laid on the ship before it sails, the charter party is dissolved, and the merchant pays the expence of loading and unloading; but if the embargo be only for a short limited time, the voyage shall be performed when it expires, and neither party is liable for damages.

If the shipmaster sails to any other port than that agreed on, without necessity, he is liable for damages; if through necessity, he must sail to the port agreed on, at his own expence.

If a ship be taken by the enemy, and retaken or ransomed, the charter-party continues in force.

If the master transfer the goods from his own ship to another, without necessity, and they perish, he is liable for the value; but if his own ship be in imminent danger, the goods may be put on board another ship at the risk of the owner.

If a ship be freighted out and home, and a sum agreed on for the whole voyage, nothing is due till it return; and the whole is lost if the ship be lost on the return.

If a certain sum be specified for the homeward voyage, it is due, although the factor abroad should have no goods to send home.

In the case of a ship freighted to Madeira, Carolina, and home, a particular freight fixed for the homeward

ward voyage, and an option reserved for the factor at Carolina to decline it, unless the ship arrived before 1st of March: the shipmaster, foreseeing he could not arrive there within that time, and might be disappointed of a freight, did not go there at all. He was found liable in damages, as the obligation was absolute on his part, and conditional only on the other.

If the goods be damaged without fault of the ship or master, the owner is not obliged to receive them and pay freight, but he must either receive the whole, or abandon the whole; he cannot choose those that are in best order, and reject the others. If the goods be damaged through the insufficiency of the ship, the master is liable for the same; but, if it be owing to stress of weather, he is not accountable. It is customary for shipmasters, when they suspect damage, to take a *protest against wind and weather*, at their arrival. But as this is the declaration of a party, it does not bear credit, unless supported by collateral circumstances.

If part of the goods be thrown overboard, or taken by the enemy, the part delivered pays freight.

The shipmaster is accountable for all the goods received on board, by himself or mariners, unless they perish by the act of God, or of the king's enemies.

Shipmasters are not liable for leakage on liquors; nor accountable for the contents of packages, unless packed and delivered in their presence.

Upon a principle of equity, that the labourer is worthy of his hire, differences arising with regard to freight, when the case is doubtful, ought rather to be determined in favour of the shipmaster.

2. *Ship and Owners with Creditors.* When debts are contracted for provisions or repairs to a ship, or arise from a failure in any of the above-mentioned obligations, the ship and tackle, and the owners, are liable for the debt, as well as the master.

By the mercantile law, the owners are liable in all cases, without limitation; but by statute, they are not liable for embezzlement beyond their value of ship, tackle, and freight.

A shipmaster may pledge his ship for necessary repairs during a voyage; and this hypothecation is implied by the maritime law when such debts are contracted. This regulation is necessary, and is therefore adopted by all commercial nations; for, otherwise, the master might not find credit for necessary repairs, and the ship might be lost. If repairs be made at different places, the last are preferable.

The relief against the ship is competent to the court of admiralty in England, only when repairs are finished during the course of a voyage; for the necessity of the case extends no further. If a ship be repaired at home (e. g. upon the river Thames), the creditor is only entitled to relief at common law.

The creditor may sue either the master or owners; but if he undertook the work on the special promise of the one, the other is not liable.

If the master buys provisions on credit, the owners are liable for the debt, though they have given him money to pay them.

If a ship be mortgaged, and afterwards lost at sea, the owners must pay the debt; for the mortgage is

only an additional security, though there be no express words to that purpose in the covenant.

If a ship be taken by the enemy, and ransomed, the owners are liable to pay the ransom, though the ransomer die in the hands of the captors.

3. *Owners of ship and cargo with each other.* There is a mutual obligation which subsists between all the owners of a ship and cargo. In time of danger, it is often necessary to incur a certain loss of part for the greater security of the rest; to cut a cable; to lighten the ship, by throwing part of the goods overboard; to run it ashore; or the like: and as it is unreasonable that the owners of the thing exposed for the common safety should bear the whole loss, it is defrayed by an equal contribution among the proprietors of the ship, cargo, and freight. This is the famous *Lex Rhodia de jactu*, and is now called a *general average*.

The custom of valuing goods which contribute to a general average, is not uniform in all places. They are generally valued at the price they yield at the port of destination, charges deducted; and goods thrown overboard are valued at the price they would have yielded there. Sailors wages, clothes and money belonging to passengers, and goods belonging to the king, pay no general average; but proprietors of gold and silver, in case of goods being thrown overboard, contribute to the full extent of their interest.

The following particulars are charged as general average: Damage sustained in an engagement with the enemy; attendance on the wounded, and rewards given for service in time of danger, or gratuities to the widows or children of the slain; ransom; goods given to the enemy in the nature of a ransom; charges of bringing the ship to a place of safety when in danger from the enemy, or waiting for convoy; charges of quarantine; goods thrown overboard; masts or rigging cut; holes cut in the ship to clear it of water; pilotage, when a leak is sprung; damage, when voluntarily run aground, and expence of bringing it afloat; goods lost by being put in a lighter; the long boat lost in lightening the ship in time of danger; hire of cables and anchors; charges of laying in ballast, victualling, and guarding the ship when detained; charges at law, in reclaiming the ship and cargo; interest and commission on all these disbursements.

Though goods put on board a lighter, and lost, are charged as a general average; yet if the lighter be saved, and the ship with the rest of the goods be lost, the goods in the lighter belong to their respective proprietors, without being liable to any contribution.

If part of the goods be plundered by a pirate, the proprietor or shipmaster is not entitled to any contribution.

The essential circumstances that constitute a general average are these; the loss must be the effect of a voluntary action; and the object of that action the common safety of the whole. Quarantine, which is allowed, seems not to fall within this description.

Game-Laws. See the article GAME.

Sir William Blackstone, treating of the alterations in our laws, and mentioning franchises granted of chase and free warren, as well to preserve the breed of animals, as to indulge the subject, adds, "From a similar principle to which, though the forest laws are now mitigated, and by degrees grown entirely obsolete; yet from this root has sprung a *bastard slip*, known by the name of the *game law*, now arrived to and wantoning in its highest vigour: both founded upon the same unreasonable notion of permanent property in wild creatures; and both productive of the same tyranny to the commons; but with this difference, that the forest laws established only one mighty hunter throughout the land; *the game laws have raised a little Nimrod in every manor.* And in one respect the ancient law was much less unreasonable than the modern; for the king's grantee of a chase or free warren, might kill game in every part of his franchise; but now, though a freeholder of less than 100l. a year *is forbidden to kill partridge upon his own estate*, yet nobody else (not even the lord of the manor, unless he hath a grant of free warren) can do it without *committing a trespass and subjecting himself to an action.*

Under the article GAME, the destroying such beasts and fowls as are ranked under that denomination, was observed (upon the old principles of the forest law) to be a trespass and offence in all persons alike, who have not authority from the crown to kill game (which is royal property) by the grant of either a free warren, or at least a manor of their own. But the laws called the *game laws* have also inflicted additional punishments (chiefly pecuniary) on persons guilty of this general offence, unless they be people of such rank or fortune as is therein particularly specified. All persons, therefore, of what property or distinction soever, that kill game out of their own territories, or even upon their own estates, without the king's licence expressed by the grant of a franchise, are guilty of the first original offence of encroaching on the royal prerogative. And those indigent persons who do so, without having such rank or fortune as is generally called a *qualification*, are guilty, not only of the original offence, but of the aggravations also created by the statutes for preserving the game: which aggravations are so severely punished, and those punishments so implacably inflicted, that the offence against the king is seldom thought of, provided the miserable delinquent can make his peace with the lord of the manor. The only rational footing upon which this offence, thus aggravated, can be considered as a crime, is, that in low and indigent persons it promotes idleness, and takes them away from their proper employments and callings: which is an offence against the public police and economy of the commonwealth.

The statutes for preserving the game are many and various, and not a little obscure and intricate; it being remarked, that in one statute only, 5 Ann. c. 14. there is false grammar in no fewer than six places, besides other mistakes: the occasion of which, or what denomination of persons were probably the penners of these statutes, it is unnecessary here to inquire. It may be in general sufficient to observe, that the *qualifications* for killing game, as they are usually called, or more properly the exemptions from the penalties

inflicted by the statute law, are, 1. The having a freehold estate of 100l. per annum; there being fifty times the property required to enable a man to kill a partridge, as to vote for a knight of the shire. 2. A leasehold for 99 years of 150l. per annum. 3. Being the son and heir apparent of an esquire (a very loose and vague description) or person of superior degree.— 4. Being the owner or keeper of a forest, park, chase, or warren. For unqualified persons transgressing these laws, by killing game, keeping engines for that purpose, or even having game in their custody, or for persons (however qualified) that kill game or have it in possession, at unseasonable times of the year, or unseasonable hours of the day or night, on Sundays or on Christmas day, there are various penalties assigned, corporal and pecuniary, by different statutes (after mentioned), on any of which, but only on one at a time, the justices may convict in a summary way, or (in most of them) prosecutions may be carried on at the assizes. And, lastly, by statute 28 Geo. II. c. 12. no person, however qualified to kill, may make merchandise of this valuable privilege, by selling or exposing to sale any game, on pain of like forfeiture as if he had no qualification.

The statutes above referred to are as follow: No person shall take pheasants or partridges with engines in another man's ground, without license, on pain of 10l. stat. 11 Hen. VIII. c. 13. If any person shall take or kill any pheasants or partridges with any net in the night time, they shall forfeit 20s. for every pheasant, and 10s. for every partridge taken: and hunting with spaniels in standing corn, incurs a forfeiture of 40s. 23 Eliz. c. 10. Those who kill any pheasant, partridge, duck, heron, hare, or other game, are liable to a forfeiture of 20s. for every fowl and hare; and selling, or buying to sell again, any hare, pheasant, &c. the forfeiture is 10s. for each hare, &c. 1 Jac. I. c. 17. Also pheasants or partridges are not to be taken between the first of July and the last of August, on pain of imprisonment for a month, unless the offenders pay 20s. for every pheasant, &c. killed: and constables, having a justice of peace's warrant, may search for game and nets, in the possession of persons not qualified by law to kill game or to keep such nets, 7 Jac. I. c. 11. Constables, by a warrant of a justice of peace, are to search houses of suspected persons for game: and if any game be found upon them, and they do not give a good account how they came by the same, they shall forfeit for every hare, pheasant, or partridge, not under 5s. nor exceeding 20s. And inferior tradesmen hunting, &c. are subject to the penalties of the act, and may likewise be sued for trespass. If officers of the army or soldiers kill game without leave, they forfeit 5l. an officer, and 10s. a soldier; 4 and 5 W. and M. c. 23. Higglers, chapmen, carriers, innkeepers, victuallers, &c. having in their custody hare, pheasant, partridge, heath game, &c. (except sent by some person qualified to kill game), shall forfeit for every hare and fowl 5l. to be levied by distress and sale of their goods, being proved by one witness, before a justice; and for want of distress shall be committed to the house of correction for three months: one moiety of the forfeiture to the informer, and the other to the poor. And selling game, or offering the same to sale, incurs the like penalty; where-

Game-Laws.

Game-Laws.

in hare and other game found in a shop, &c. is adjudged an exposing to sale: killing hares in the night is liable to the same penalties: and if any persons shall drive wild fowls with nets, between the first day of July and the first of September, they shall forfeit 5s. for every fowl; 5 Ann. c. 14. 9 Ann. c. 25. If any unqualified person shall keep a gun, he shall forfeit 10l.; and persons being qualified may take guns from those that are not, and break them; 21 and 22 Car. II. c. 25. and 33 Hen. VIII. c. 6. One justice of peace, upon examination and proof of the offence, may commit the offender till he hath paid the forfeiture of 10l. And persons, not qualified by law, keeping dogs, nets, or other engines to kill game, being convicted thereof before a justice of peace, shall forfeit 5l. or be sent to the house of correction for three months; and the dogs, game, &c. shall be taken from them, by the statute 5 Ann. If a person hunt upon the ground of another, such other person cannot justify killing of his dogs, as appears by 2 Roll. Abr. 567. But it was otherwise adjudged, Mich. 33 Car. II. in C. B. 2 Cro. 44. and see 3. Lev. xxviii. In actions of debt, *qui tam*, &c. by a common informer on the statute 5 Ann. for 15l. wherein the plaintiff declared on two several counts, one for 10l. for killing two partridges, the other for 5l. for keeping an engine to destroy the game, not being qualified, &c. the plaintiff had a verdict for 5l. only: this action was brought by virtue of the stat. 8 Geo. I. See stat. 9 Geo. I. c. 22. See likewise 24 Geo. II. c. 34. for the better preservation of the game in Scotland. By the stat. 26 Geo. II. c. 2. all suits and actions brought by virtue of stat. 8. Geo. I. c.—for the recovery of any pecuniary penalty, or sum of money, for offences committed against any law for the better preservation of the game, shall be brought before the end of the second term after the offence committed.

By 28 Geo. II. c. 12. persons selling, or exposing to sale, any game, are liable to the penalties inflicted by 5 Ann. c. 14. on higglers, &c. offering game to sale: and game found in the house or possession of a poulterer, saleman, fishmonger, cook, or pastry cook, is deemed exposing thereof to sale.

By 2 Geo. III. c. 19. after the first June 1762, no person may take, kill, buy or sell, or have in his custody, any partridge, between 12th February and 1st September, or pheasant between 1st February and 1st October, or heath fowl between 1st January and 20th August, or grouse between 1st December and 25th July, in any year; pheasants taken in their proper season, and kept in mews, or breeding places excepted: and persons offending in any of the cases aforesaid, forfeit 5l. per bird, to the prosecutor, to be recovered, with full costs, in any of the courts at Westminster. By this act, likewise, the whole of the pecuniary penalties under the 8 Geo. I. c. 19. may be sued for, and recovered to the sole use of the prosecutor, with double costs; and no part thereof to go to the poor of the parish.

By 5 George III. c. 14. persons convicted of entering warrens in the night time, and taking or killing coney there, or aiding or assisting therein, may be punished by transportation, or by whipping, fire, or imprisonment. Persons convicted on this act, not liable to be convicted under any former act. This act does

not extend to the destroying coney in the day time, on the sea and river banks in the county of Lincoln, &c. No satisfaction to be made for damages occasioned by entry, unless they exceed 1s. It may not be improper to mention an act lately made, and not yet repealed, viz. 10 Geo. III. c. 19. for preservation of the game, which shows the importance of the object. It is thereby enacted, That if any person kill any hare, &c. between sunsetting and sunrising, or use any gun, &c. for destroying game, he shall for the first offence be imprisoned for any time not exceeding six nor less than three months: if guilty of a second offence, after conviction of a first, to be imprisoned for any time not exceeding 12 months nor less than six; and shall also within three days after the time of his commitment, either for the first or for any other offence, be once publicly whipped.

By 25 George III. c. 50. and 31 George III. c. 21. every person in Great Britain (the royal family excepted), who shall, after July 1. 1785, use any dog, gun, net, or other engine, for the taking or destruction of game (not acting as gamekeeper), shall deliver in a paper or account in writing, containing his name and place of abode, to the clerk of the peace or his deputy, and annually take out a certificate thereof; and every such certificate shall be charged with a stamp duty of 2l. 2s. (and an additional 1l. 1s. by 31 George III. c. 21.) making in the whole 3l. 3s.—Every deputation of a gamekeeper shall be registered with the clerk of the peace, and such gamekeeper shall annually take out a certificate thereof; which certificate shall be charged with a stamp duty of 10s. 6d. (and an additional 10s. 6d. by 31 Geo. III. c. 21), making in the whole 1l. 1s.—The duties to be under the management of the commissioners of the stamp office.

From and after the said 1st of July 1785, the clerk of the peace shall annually deliver to persons requiring the same, duly stamped, a certificate or licence according to the form therein mentioned, for which he shall be entitled to demand 1s. for his trouble; and on refusal or neglect to deliver the same, forfeit 20l.—Every certificate to bear date the day when issued, and to continue in force till the 1st day of July then following, on penalty of 20l.

After the 1st day of July 1785, any person that shall use any greyhound, hound, pointer, setting dog, spaniel, or other dog, or any gun, net, or engine, for taking or killing of game, without a certificate, is liable to the penalty of 20l. And if any gamekeeper shall, for the space of 20 days after the said 1st day of July, or if any gamekeeper thereafter to be appointed shall, for the space of 20 days next after such appointment, neglect or refuse to register his deputation and take out a certificate thereof, he is liable to the penalty of 20l.

The clerks of the peace are to transmit to the stamp office in London alphabetical lists of the certificates granted in every year before the 1st day of August under penalty of 20l. These lists are to be kept at the stamp office in London, and there to be inspected on payment of 1s.: And the commissioners of the stamp duties are, once or oftener in every year, as soon as such lists are transmitted to them, to cause the same to be published in the newspapers circulating in each county, or such public paper as they shall think most proper.

Game-Laws.

Law.

Gamekeepers were first introduced by the qualification act, 22 and 23 Car. II. c. 25. and subsequent statutes have made a number of various regulations respecting them. This authorises lords of manors of the degree of esquire, to appoint gamekeepers, who shall have power, within the manor, to seize guns, nets, and engines, kept by unqualified persons to destroy game.

By 5 Ann. c. 14. f. 14. lords and ladies of manors are authorised to empower their gamekeepers to kill game; but prohibited the latter, under pain of three months imprisonment, from selling or disposing of the game so killed, without the consent of the lord or lady, under whose appointment they acted.

By 3 Geo. I. c. 11. no lord of a manor is to appoint any person to be a gamekeeper, with power to take and kill game, unless such person be qualified by law so to do, or be truly and properly a servant to the lord, or immediately employed to take or kill game, for the sole use or benefit of the said lord. Offences against this act to be punished with pecuniary fines.

Gamekeepers are enumerated among the different descriptions of servants, chargeable with the duty under 25 Geo. III. c. 43.

If any gamekeeper, who shall have registered his deputation, and taken out a certificate thereof, shall be changed, and a new gamekeeper appointed in his stead, the first certificate is declared null and void, and the person acting under the same, after notice, is liable to the penalty of 20*l*. And any person in pursuit of game, who shall refuse to produce his certificate, or to tell his name or place of abode, or shall give in any false or fictitious name or place of abode to any person requiring the same, who shall have obtained a certificate, is liable to the penalty of 50*l*.

The certificates are not to authorize persons to kill game at any time prohibited by law, nor to give any person any right to kill game, unless such person shall be qualified so to do by the laws now in being, but shall be liable to the same penalties as if this act had not passed. [So that though by this act qualified and unqualified persons are equally included, yet having a certificate does not give an unqualified person a right to kill game: the point of right still stands upon the former acts of parliament; and any unqualified person killing game without a certificate, is not only liable to the penalty inflicted by this act, but also to all the former penalties relating to the killing of game, &c.]

Witnesses refusing to appear on justices summons, or appearing and refusing to give evidence, forfeit 10*l*. The certificates obtained under deputations, not to be given in evidence for killing of game by a gamekeeper out of the manor, in respect of which such deputation or appointments was given and made. Persons counterfeiting stamps to suffer death as felons.

Penalties exceeding 20*l*. are to be recovered in any of his majesty's courts of record at Westminster; and penalties not exceeding 20*l*. are recoverable before two justices, and may be levied by distress. The whole of the penalties go to the informer.

By 40 Geo. III. c. 50. persons to the number of two or more, found in any field, &c. or other open or inclosed ground, between eight at night and six in the morning, from the first day of October to the first of February, or between the hours of ten at night and four in the morning, from first February to first Octo-

VOL. XI. Part II.

Law.

ber, in each and every year, having any gun or engine to kill or take any hare, pheasant, partridge, heath-fowl, commonly called *black game*, or grouse, commonly called *red game*, or any other game; or persons aiding them with offensive weapons, may be apprehended, and, on conviction before a justice, shall be deemed rogues and vagabonds, within the meaning of 17 Geo. III. c. 5. &c.

Military Law. See MILITARY and MARINE.

LAW, JOHN, the famous projector, was the eldest son of a goldsmith in Edinburgh, by Elizabeth Campbell heiress of Laurieston near that city; and was born about the year 1681. He was bred to no business; but possessed great abilities, and a very fertile invention. He had the address, but when a very young man, to recommend himself to the king's ministers in Scotland to arrange the revenue accounts, which were in great disorder at the time of settling the equivalent before the union of the kingdoms. The attention of the Scottish parliament being also turned to the contrivance of some means for supplying the kingdom with money, and facilitating the circulation of specie, for want of which the industry of Scotland languished; he proposed to them, for these purposes, the establishment of a bank of a particular kind, which he seems to have imagined might issue paper to the amount of the whole value of all the lands in the country: but this scheme the parliament by no means thought it expedient to adopt.

His father dying about the year 1704, Law succeeded to the small estate of Laurieston; but the rents being insufficient for his expences, he had recourse to gaming. He was tall and graceful in his person, and much addicted to gallantry and finery; and giving a sort of ton at Edinburgh, he went commonly by the name of *Beau Law*. He was forced to fly his country, however, in the midst of his career, in consequence of having fought a duel and killed his antagonist; and in some of the French literary gazettes it is said that he run off with a married lady. In his flight from justice he visited Italy; and was banished from Venice and Genoa, because he contrived to drain the youth of these cities of their money, by his superiority in calculation, that is, by being a cheat and a sharper. He wandered over all Italy, living on the event of the most singular bets and wagers, which seemed to be advantageous to those who were curious after novelty; but which were always of the most certain success with regard to him. He arrived at Turin, and proposed his system to the duke of Savoy, who saw at once, that, by deceiving his subjects, he would in a short time have the whole money of the kingdom in his possession: but that sagacious prince asking him how his subjects were to pay their taxes when all their money should be gone, Law was disconcerted, not expecting such a question.

Having been banished from Italy, and thus repulsed at Turin, Law proceeded to Paris, where he was already known as a projector. In the lifetime of Louis XIV. he had transmitted his schemes to Desmarteau and to Chamillard, who had rejected them as dangerous innovations. He now proposed them to the Duc d'Orleans, who desired Noailles to examine them, to be as favourable in his report as possible, and

Law.

to remark such of them as were practicable. Noailles called in the assistance of several merchants and bankers, who were averse to the system. Law then proposed the establishment of a bank, composed of a company, with a stock of six millions. Such an institution promised to be very advantageous to commerce. An arret of the 21 March 1716 established this bank, by authority, in favour of Law and his associates; two hundred thousand shares were instituted of one thousand livres each; and Law deposited in it to the value of two or three thousand crowns which he had accumulated in Italy, by gaming or otherwise. This establishment very much displeased the bankers, because at the beginning business was transacted here at a very small premium, which the old financiers had charged very highly. Many people had at first little confidence in this bank; but when it was found that the payments were made with quickness and punctuality, they began to prefer its notes to ready money. In consequence of this, shares rose to more than 20 times their original value; and in 1719 their valuation was more than 80 times the amount of all the current specie in the kingdom. But the following year, this great fabric of false credit fell to the ground, and almost overthrew the French government, ruining some thousands of families; and it is remarkable, that the same desperate game was playing by the South sea directors in England, in the same fatal year, 1720. Law being exiled as soon as the credit of his projects began to fail, retired to Venice, where he died in 1729.

The principles upon which Law's original scheme was founded, are explained by himself in *A Discourse concerning Money and Trade*, which he published in Scotland where (as we have seen) he first proposed it. "The splendid but visionary ideas which are set forth in that and some other works upon the same principles (Dr Adam Smith observes), still continue to make an impression upon many people, and have perhaps in part contributed to that excess of banking which has of late been complained of both in Scotland and in other places."

LAW, EDMUND, D. D. bishop of Carlisle, was born in the parish of Cartmel in Lancashire, in the year 1703. His father who was a clergyman, held a small chapel in that neighbourhood; but the family had been situated at Askham, in the county of Westmorland. He was educated for some time at Cartmel school, afterwards at the free grammar school at Kendal; from which he went, very well instructed in the learning of grammar schools, to St John's college in Cambridge.

Soon after taking his first degree, he was elected fellow of Christ college in that university. During his residence in which college, he became known to the public by a translation of Archbishop King's Essay upon the Origin of Evil, with copious notes; in which many metaphysical subjects, curious and interesting in their own nature, are treated of with great ingenuity, learning, and novelty. To this work was prefixed, under the name of a preliminary dissertation, a very valuable piece, written by the reverend Mr Gay of Sidney college. Our bishop always spoke of this gentleman in terms of the greatest respect. In the Bible and in the writings of Mr Locke, no man, he used to say, was so well versed.

Law.

He also, whilst at Christ college, undertook and went through a very laborious part in preparing for the press an edition of Stephens's Thesaurus. His acquaintance, during this his first residence in the university, was principally with Dr Waterland, the learned master of Magdalen college; Dr Jortin, a name known to every scholar; and Dr Taylor, the editor of the Demosthenes.

In the year 1757 he was presented by the university to the living of Graystock in the county of Cumberland, a rectory of about 300l. a-year. The advowson of this benefice belonged to the family of Howards of Graystock, but devolved to the university, for this turn, by virtue of an act of parliament, which transfers to these two bodies the nomination to such benefices as appertain, at the time of the vacancy, to the patronage of a Roman Catholic. The right, however, of the university was contested; and it was not till after a law suit of two years continuance that Mr Law was settled in his living. Soon after this, he married Mary the daughter of John Christian, Esq. of Unerigg, in the county of Cumberland; a lady whose character is remembered with tenderness and esteem by all who knew her.

In 1743, he was promoted by Sir George Fleming, bishop of Carlisle, to the archdeaconry of that diocese; and in 1746 went from Graystock to reside at Salkeld, a pleasant village upon the banks of the river Eden, the rectory of which is annexed to the archdeaconry. Mr Law was not one of those who lose and forget themselves in the country. During his residence at Salkeld, he published Considerations on the Theory of Religion: to which were subjoined, Reflections on the Life and Character of Christ; and an Appendix concerning the use of the words Soul and Spirit in holy Scripture, and the state of the dead there described.

Dr Keene held at this time, with the bishopric of Chester, the mastership of Peterhouse in Cambridge. Desiring to leave the university, he procured Dr Law to be elected to succeed him in that station. This took place in the year 1756; in which year Dr Law resigned his archdeaconry in favour of Mr Eyre, a brother-in-law of Dr Keene. Two years before this, he had proceeded to his degree of doctor of divinity: in his public exercise for which, he defended the doctrine of what is usually called the "sleep of the soul."

About the year 1760, he was appointed head librarian of the university; a situation which, as it procured an easy and quick access to books, was peculiarly agreeable to his taste and habits. Some time after this, he was also appointed casuistical professor. In the year 1762, he suffered an irreparable loss by the death of his lady; a loss in itself every way afflictive, and rendered more so by the situation of his family, which then consisted of eleven children, many of them very young. Some years afterwards, he received several preferments, which were rather honourable expressions of regard from his friends, than of much advantage to his fortune.

By Dr Cornwallis, then bishop of Litchfield, afterwards archbishop of Canterbury, who had been his pupil at Christ college, he was appointed to the archdeaconry of Staffordshire, and to a prebend in the church of Litchfield. By his old acquaintance Dr Green, bishop of Lincoln, he was made a prebendary of

Law. of that church. But in the year 1767, by the intervention of the duke of Newcastle, to whose interest in the memorable contest for the high stewardship of the university, he had adhered in opposition to some temptations, he obtained a stall in the church of Durham. The year after this, the duke of Grafton, who had a short time before been elected chancellor of the university, recommended the master of Peterhouse to his majesty for the bishopric of Carlisle. This recommendation was made not only without solicitation on his part or that of his friends, but without his knowledge, until the duke's intention in his favour was signified to him by the archbishop.

About the year 1777, Bishop Law gave to the public a handsome edition, in three volumes quarto, of the works of Mr Locke, with a Life of the Author, and a Preface. Mr Locke's writings and character he held in the highest esteem, and seems to have drawn from them many of his own principles: He was a disciple of that school. About the same time he published a tract, which engaged some attention in the controversy concerning subscription; and he published new editions of his two principal works, with considerable additions, and some alterations.

Dr Law held the see of Carlisle almost 19 years; during which time he twice only omitted spending the summer months in his diocese at the bishop's residence at Rose Castle; a situation with which he was much pleased, not only on account of the natural beauty of the place, but because it restored him to the country in which he had spent the best part of his life. In the year 1787 he paid this visit in a state of great weakness and exhaustion: and died at Rose Castle about a month after his arrival there, on the 14th day of August, and in the 84th year of his age.

The life of the bishop of Carlisle was a life of incessant reading and thought, almost entirely directed to metaphysical and religious inquiries. Besides the works already mentioned, he published, in 1734 or 1735, a very ingenious *Inquiry into the Ideas of Space, Time, &c.* in which he combats the opinions of Dr Clarke and his adherents on these subjects: but the tenet by which his name and writings are principally distinguished, is "that Jesus Christ, at his second coming, will, by an act of his power, restore to life and consciousness the dead of the human species, who by their own nature, and without this interposition, would remain in the state of insensibility to which the death brought upon mankind by the sin of Adam had reduced them." He interpreted literally that saying of St Paul, 1 Cor. xv. 21. "As by man came death, by man came also the resurrection of the dead." This opinion had no other effect upon his own mind than to increase his reverence for Christianity, and for its divine Founder. He retained it, as he did his other speculative opinions, without laying, as many are wont to do, an extravagant stress upon their importance, and without pretending to more certainty than the subject allowed of. No man formed his own conclusions with more freedom, or treated those of others with greater candour and equity. He never quarrelled with any person for differing from him, or considered that difference as a sufficient reason for questioning any man's sincerity, or judging meanly of his understanding. He was zealously attached to religious liberty, because he

thought that it leads to truth; yet from his heart he loved peace. But he did not perceive any repugnancy in these two things. There was nothing in his elevation to his bishopric which he spoke of with more pleasure, than its being a proof that decent freedom of inquiry was not discouraged.

He was a man of great softness of manners, and of the mildest and most tranquil disposition. His voice was never raised above its ordinary pitch. His countenance seemed never to have been ruffled; it preserved the same kind and composed aspect, truly indicating the calmness and benignity of his temper. He had an utter dislike of large and mixed companies. Next to his books, his chief satisfaction was in the serious conversation of a literary companion, or in the company of a few friends. In this sort of society he would open his mind with great unreservedness, and with a peculiar turn and sprightliness of expression. His person was low, but well formed: his complexion fair and delicate. Except occasional interruptions by the gout, he had for the greatest part of his life enjoyed good health; and when not confined by that distemper, was full of motion and activity. About nine years before his death, he was greatly enfeebled by a severe attack of the gout in his stomach; and a short time after that, lost the use of one of his legs. Notwithstanding his fondness of exercise, he resigned himself to this change, not only without complaint, but without any sensible diminution of his cheerfulness and good humour. His fault (for we are not writing a panegyric) was the general fault of retired and studious characters, too great a degree of inaction and facility in his public station. The modesty, or rather bashfulness of his nature, together with an extreme unwillingness to give pain, rendered him sometimes less firm and efficient in the administration of authority than was requisite. But it is the condition of human morality. There is an opposition between some virtues which seldom permits them to subsist together in perfection.

The bishop was interred in his cathedral church, in which a handsome monument is erected to his memory.

LAWBURROWS, in *Scots Law*. See *Law*, Part III. N° clxxviii. 16.

LAWENBURG, Duchy of, a territory of Germany, in the circle of Lower Saxony, bounded by the duchy of Holstein on the north and west, by the duchy of Mecklenburg on the east, and by the duchy of Lauenburg, from which it is separated by the river Elbe, on the west; being about 85 miles long, and 20 broad. The chief towns are Lawenburg, Molen, Witemburg, and Ratzeburg. It belongs to the electorate of Hanover.

LAWENBURG, a city of Germany in the circle of Lower Saxony, and capital of a duchy of the same name. It is a small but populous town, situated on the Elbe, under the brow of a very high hill, from whence there is a delightful prospect over the adjacent country. It has a castle on an eminence, and is convenient for trade. E. Long. 10. 51. N. Lat. 53. 36.

LAWENBURG, a town of Germany in Farther Pomerania, and the chief place to the territory of the same name belonging to the elector of Brandenburg.

LAWLESS COURT, a court said to be held annually on the King's Hill at Rochford in Essex, on the

Lawingen
||
Lawrence.

Wednesday morning after Michaelmas day at cock-crow, where they whisper, and have no candle, nor any pen and ink, but only a coal. Persons who owe suit, or service, and do not appear, forfeit double their rent every hour they are missing.

This servile attendance, Camden informs us, was imposed on the tenants for conspiring at the like unreasonable hour to raise a commotion. The court belongs to the honour of Raleigh, and to the earl of Warwick; and is called *lawless*, from its being held at an unlawful hour.

LAWINGEN, a town of Germany, in the circle of Suabia; formerly imperial, but now subject to the duke of Neuburg. Here the duke of Bavaria, in 1704, fortified his camp to defend his country against the British forces and their allies commanded by the duke of Marlborough, who forced their intrenchments. It is seated on the Danube, in E. Long. 10. 29. N. Lat. 38. 32.

LAWN, a spacious plain in a park, or adjoining to a noble seat. As to the dimensions of a lawn: In a large park, it should be as extensive as the ground will permit; and, if possible, it should never be less than 50 acres: but in gardens of a moderate extent, a lawn of 10 acres is sufficient; and in those of the largest size, 15 acres. The best situation for a lawn is in the front of the house: and here, if the house front the east, it will be extremely convenient; but the most desirable aspect for a lawn is that of the south-east. As to the figure of the lawn, some recommend an exact square, others an oblong square, some an oval, and others, a circular figure: but neither of these are to be regarded. It ought to be so contrived, as to suit the ground; and there should be trees planted for shade on the boundaries of the lawn, so the sides may be broken by irregular plantations of trees, which, if there are not some good prospects beyond the lawn, should bound it on every side, and be brought round pretty near to each end of the house. If in these plantations round the lawn, the trees are placed irregularly, some breaking much forwarder on the lawn than others, and not crowded too close together, they will make a better appearance than any regular plantations can possibly do; and if there are variety of trees, properly disposed, they will have a good effect; but only those which make a fine appearance, and grow large, straight, and handsome, should be admitted here. The most proper trees for this purpose, are the elm, oak, chestnut, and beech; and if there are some clumps of evergreen trees intermixed with the others, they will add to the beauty of the whole, especially in the winter season; the best sorts for this purpose are Lord Weymouth's pine, and the silver and spruce firs.

LAWN, in manufactures, a fine sort of linen, remarkable for being used in the sleeves of the clerical dress of bishops.

LAWRENCE, Sr, the largest river in North America, proceeding from Lake Ontario, from which it runs a course of 700 miles to the Atlantic ocean.

From Lake Ontario to Montreal this river has the name of Iroquois, and after taking a north-east course it embosoms the island of Montreal, above which it receives Ottawas from the west, forming several islands of great fertility. From Montreal it takes the name of

St Lawrence, and passing by Quebec, it meets the tide more than 400 miles from the sea, and is so far navigable for large vessels. Having received in its course St John's, Seguina, Lesprairies, Trois Rivieres, and numberless other smaller streams, it falls into the ocean at Cape Rosieres, by a mouth about 90 miles broad. The principal entrance into the gulf of St Lawrence from the Atlantic ocean, is between capes Ray and Breton. It contains a number of islands, viz. St John's, at its southern extremity, on the coast of New Brunswick and Nova-Scotia; Anticosti, at the mouth of the St Lawrence, besides a number of small islands.

Prince Edward's island, about 120 miles in length, with a population of 8000 persons, is also in the gulf of St Lawrence. Here a new settlement was made by Lord Selkirk in 1803, composed of a colony of emigrants, amounting to 800, from the Highlands of Scotland.

LAWSONIA, EGYPTIAN PRIVET, a genus of plants belonging to the octandria class; and in the natural method ranking with those of which the order is doubtful. See BOTANY Index.

LAWYER, a counsellor, or one who is learned or skilled in the law. See COUNSELLOR, BARRISTER, and SERJEANT.

LAY, a kind of ancient poem among the French, consisting of very short verses.

There were two sorts of lays; the *great*, and the *little*. The first was a poem consisting of twelve couplets of verses, of different measures. The other was a poem consisting of sixteen or twenty verses, divided into four couplets.

These lays were the lyric poetry of the old French poets, who were imitated by some among the English. They were principally used on melancholy subjects, and are said to have been formed on the model of the trochaic verses of the Greek and Latin tragedies.

Father Morgues gives us an extraordinary instance of one of these ancient lays, in his Treatise of French Poetry.

*Sur l'appuis du monde
Que fait il qu'on fonde
D'espoir ?
Cette mer profonde,
En debris seconde
Fait voir
Calme au matin, l'onde
Et l'orage y gronde
Le soir.*

Lay-Brothers, among the Romanists, those pious but illiterate persons, who devote themselves at some convent to the service of the religious. They wear a different habit from that of the religious; but never enter into the choir, nor are present at the chapters; nor do they make any other vow except of constancy and obedience. In the nunneries there are also lay sisters.

Lay-Man, one who follows a secular employment, and has not entered into holy orders.

LAYERS, in Gardening, are tender shoots or twigs of trees, laid or buried in the ground, till, having struck root, they are separated from the parent tree, and become distinct plants.—The propagating trees by *layers* is done in the following manner: The branches of the trees are to be slit a little way, and laid under

Lawsoni
||
Layers.

Laying
||
Lead.

the mould for about half a foot; the ground should be first made very light, and after they are laid they should be gently watered. If they will not remain easily in the position they are put in, they must be pegged down with wooden hooks: the best season for doing this is, for evergreens, toward the end of August, and, for other trees, in the beginning of February. If they are found to have taken root, they are to be cut off from the main plant the succeeding winter, and planted out. If the branch is too high from the ground, a tub of earth is to be raised to a proper height for it. Some pare off the rind, and others twist the branch before they lay it, but this is not necessary. The end of the layer should be about a foot out of the ground; and the branch may be either tied tight round with a wire, or cut upwards from a joint, or cut round for an inch or two at the place, and it is a good method to pierce several holes through it with an awl above the part tied with the wire.

LAYING THE LAND, in *Navigation*, the state of motion which increases the distance from the coast, so as to make it appear lower and smaller, a circumstance which evidently arises from the intervening convexity of the surface of the sea. It is used in contradistinction to *raising* the land, which is produced by the opposite motion of approach towards it. See **LAND**.

LAZAR HOUSE, or **LAZARETTO**, a public building, in the nature of an hospital, to receive the poor, and those afflicted with contagious distempers. In some places, lazarettos are appointed for the performance of quarantine; in which case, those are obliged to be confined in them who are suspected to have come from places infected with the plague.

LAYSTOFF, or **LOWESTOFF**, a town of Suffolk 117 miles from London, seems to hang over the sea, and its chief business is fishing for cod in the North sea, and for herring, mackarel, and sprats, at home. The church is at some distance, but there is a chapel in the town. Having been a part of the ancient demesnes of the crown, this town has a charter and a seal, by the former of which the inhabitants are exempted from serving on juries. Some take this to be the most eastern part of Britain.

LAZULI, or *Lapis LAZULI*, a species of mineral belonging to the siliceous genus. See **MINERALOGY Index**.

LEACHLADE, a town of Gloucestershire, 12 miles east from Cirencester, 29 miles from Gloucester, and 60 from London. The river Thames waters it on the south and east sides, and divides it from Wiltshire and Berkshire. The Leach runs through the north side of the parish. The Thames river is navigable for barges of 50 tons burden, but want of water during part of the year makes the navigation very uncertain. The church is a large handsome building, with double aisles, supported by two rows of fluted pillars.

LEAD, one of the metals, of a white colour inclining to blue, the least ductile, the least elastic, and the least sonorous, of the whole, but possessing a considerable degree of specific gravity. See **CHEMISTRY** and **MINERALOGY Index**.

White LEAD, or *Ceruse*. See **CHEMISTRY Index**.

Black LEAD, or *Plumbago*, a species of mineral be-

longing to the class of *Inflammables*. See **MINERALOGY Index**.

Milled LEAD. See **CHEMISTRY Index**.

Poison of LEAD. See **POISON**.

Sheet LEAD. See **PLUMBERY**.

LEAF, a part of a plant extended into length and breadth in such a manner as to have one side distinguishable from the other. This is Miller's definition. Linnæus denominates leaves "the organs of motion, or muscles of the plant."—The leaves are not merely ornamental to plants; they serve very useful purposes, and make part of the organs of vegetation.

The greater number of plants, particularly trees, are furnished with leaves: in mushrooms, and shrubby horse tail, they are totally wanting. Ludwic defines leaves to be fibrous and cellular processes of the plant, which are of various figures, but generally extended into a plain membranaceous or skinny substance. They are of a deeper green than the footstalks on which they stand, and are formed by the expansion of the vessels of the stalk, among which, in several leaves, the proper vessels are distinguished by the particular taste, colour, and smell, of the liquors contained within them.

By the expansion of the vessels of the stalk, are produced several ramifications or branches, which, crossing each other mutually, form a kind of net: the meshes or interstices of which are filled up with a tender cellular substance, called the *pulp*, *pith*, or *parenchyma*. This pulpy substance is frequently consumed by certain small insects, whilst the membranous net remaining untouched exhibits the genuine skeleton of the leaf.

The net in question is covered externally with an epidermis or scarf skin, which appears to be a continuation of the scarf skin of the stalk, and perhaps of that of the stem. M. de Saussure, a judicious naturalist, has attempted to prove, that this scarf skin, like that of the petals, is a true bark, composed itself of an epidermis and cortical net; these parts seem to be the organs of perspiration, which serve to dissipate the superfluous juices.

The cortical net is furnished, principally on the surface of the leaf, with a great number of suckers or absorbent vessels, destined to imbibe the humidity of the air. The upper surface, turned towards heaven, serves as a defence to the lower, which looks downward; and this disposition is so essential to the vegetable economy, that, if a branch is overturned in such a manner as to destroy the natural direction of the leaves, they will, of themselves, in a very short time, resume their former position; and that as often as the branch is thus overturned.

Leaves, then, are useful and necessary organs; trees perish when totally divested of them. In general, plants stripped of any of their leaves, cannot shoot vigorously: witness those which have undergone the depredations of insects; witness, likewise, the very common practice of stripping off some of the leaves from plants, when we would suspend their growth, or diminish the number of their shoots. This method is sometimes observed with corn and the esculent grasses; and, in cold years, is practised on fruit trees and vines, to render the fruit riper and better coloured: but in

this case it is proper to wait till the fruits have acquired their full bulk, as the leaves contribute greatly to their growth, but hinder, when too numerous, that exquisite rectifying of the juices, which is so necessary to render them delicious and palatable.

When vegetation ceases, the organs of perspiration and inspiration become superfluous. Plants, therefore, are not always adorned with leaves: they produce new ones every year; and every year the greater part are totally divested of them, and remain naked during the winter.

LEAF Insect. See CIMEX, ENTOMOLOGY *Index.*

LEAF-Skeletons. One help for acquiring a knowledge of the anatomy of plants, is the art of reducing leaves to skeletons, which may be done by exposing the leaves to decay for some time soaked in water, by which means the softer will be separated from the internal harder parts. By carefully wiping, pressing and rinsing them, the harder parts may be obtained from the rest alone and entire. Some have been able to separate the outer covering on both sides from the woody net, and even to split the latter into two. A naturalist in the year 1645 first conceived the idea of making leaf-skeletons by employing decomposition for that purpose, assisting it by several ingenious operations of art. When the method of producing these skeletons was publicly known, numberless preparations of them were every where attempted. So much did leaf-skeletons afterwards engage the attention of philosophers, that one Seligmann wrote a treatise on the various methods which may be employed in their preparation.

The art also of raising trees from leaves has been long known, the first account of which was published by Agostino Mandirola, an Italian of the Franciscan order, who assures us that he produced trees from the leaves of the cedar and lemon tree. In the garden of Baron de Munchhausen, a young tree was obtained from a leaf of the *limon à Rivo*, which yielded fruit the second year: It is more than probable that the multiplication of the *opuntia* or Indian fig, first suggested the idea of such experiments, for every joint of that plant when stuck into the earth, and properly nurtured, throws out roots and grows.

LEAF, in clocks and watches, an appellation given to the notches of their pinions.

Gold LEAF, usually signifies fine gold beaten into plates of an exceeding thinness, which are well known in the arts of gilding, &c. See *GOLD Leaf*.

LEAGUE, a measure of length, containing more or fewer geometrical paces, according to the different usages and customs of countries. A league at sea, where it is chiefly used by us, being a land measure mostly peculiar to the French and Germans, contains 3000 geometrical paces, or three English miles. The French league sometimes contains the same measure, and in some parts of France it consists of 3500 paces: the mean or common league consists of 2400 paces, and the little league of 2000. The Spanish leagues are larger than the French, 17 Spanish leagues making a degree, or 20 French leagues, or 69½ English statute miles. The Dutch and German leagues contain each four geographical miles. The Persian leagues are pretty near of the same extent with the Spanish; that is, they are equal to four Italian miles, which is pretty near to what Herodotus calls the length of the

Persian parasang, which contained 30 stadia, eight whereof, according to Strabo, make a mile. The word comes from *leuca* or *leuga*, an ancient Gaulish word for an itinerary measure, and retained in that sense by the Romans. Some derive the word *leuca* from *λευκος*, "white;" as the Gauls, in imitation of the Romans, marked the spaces and distances of their roads with white stones.

LEAGUE also denotes an alliance or confederacy between princes and states for their mutual aid, either in attacking some common enemy, or in defending themselves. The word comes from *liga*, which in the corrupt Latin was used for a *confederacy*: *Quo quis cum alio ligatur*.

Leagues, among the Greeks, were of three sorts: 1. *Σποινη*, *Συνθηκη*, or *Ειρηνη*, whereby both parties were obliged to cease from hostilities, without even molesting the allies of each other; 2. *Επιμαχια*, whereby they engaged to lend assistance to each other in case of invasion; and, 3. *Συμμαχια*, whereby they engaged to have the same friends and enemies, and to assist each other upon all occasions. All these leagues were confirmed with oaths, and imprecations, and sacrifices. The victims most generally used were a boar, ram, or goat, sometimes all three; and sometimes bulls and lambs. They cut out the testicles of the animal, and stood upon them while they swore; and some of the hair of the victim was distributed to all present. Then they cut the animal's throat, which was called *ορχια τεμνειν*, in Latin, *ferire fœdus*. This done, they repeated their oaths and imprecations, calling the gods to witness the honesty of their intentions. A libation was then made of wine, which at this time was mixed, to imply their conjunction and union; while this was pouring out, they prayed that the blood of him who should break the treaty might be poured out in like manner. Upon these occasions no part of the victim was eaten. Still further to increase the solemnity of this obligation, the league was engraven upon brass, fixed up in places of public concourse, and sometimes read at the solemn games. Some exchanged certain *συμβολα* or *tesseræ* upon the occasion, and frequently sent ambassadors on some appointed day, to keep them in mind of their engagements to each other.

The ceremonies of the Romans in making leagues were performed by the *Fœciales*. See *FŒCIALES*.

LEAGUES of the Grisons, are a part of Switzerland, consisting of three subdivisions, viz. the upper league, the league of the house of God, and the league of the ten jurisdictions. See the article *GRISONS*.

The LEAGUE, by way of eminence, denotes that famous one on foot in France, from the year 1576 to 1593. Its intent was to prevent the succession of Henry IV. who was of the reformed religion, to the crown; and it ended with his abjuration of that faith.

The leaguers, or confederates, were of three kinds. *The zealous leaguers* aimed at the utter destruction not only of the Huguenots, but also of the ministry. *The Spanish leaguers* had principally in view the transferring the crown of France to the king of Spain, or the infant's daughter. *The moderate leaguers* aimed only at the extirpation of Calvinism, without any alteration of the government.

LEAK, at sea, is a hole in the ship, through which the water comes in. A ship is said to *spring a leak* when

Leag
Lea

^{Leake.} when she begins to *leak* or to let in the water. The manner of stopping a leak is to put into it a plug wrapped in oakum and well tarred, or in a tarpawling clout, which keeps out the water, or nailing a piece of sheet lead on the place. Seamen sometimes stop a leak by thrusting a piece of salt beef into it. The sea water, says Mr Boyle, being fresher than the brine imbibed by the beef, penetrates into its body, and causes it to swell so as to bear strongly against the edges of the broken plank, and thereby stops the influx of the water. A ready way to find a leak in a ship is to apply the narrower end of a speaking trumpet to the ear, and the other to the side of the ship where the leak is supposed to be; then the noise of the water issuing in at the leak will be heard distinctly, whereby it may be discovered.

LEAKAGE, the state of a vessel that leaks, or lets water or other liquid ooze in or out.

LEAKAGE, in commerce, is an allowance of 12 per cent. in the customs, allowed to importers of wines for the waste or damage it is supposed to have received in the passage: an allowance of two barrels in 22 is also made to the brewers of ale and beer by the excise office.

LEAKE, RICHARD, master gunner of England, was born at Harwich in 1629, and was bred to the sea. At the Restoration, he was made master gunner of the *Princess*, a frigate of 50 guns; and in the first Dutch war distinguished himself by his skill and bravery in two extraordinary actions; one against 15 sail of Dutch men of war; and another in 1657 against two Danes in the Baltic, in which the commanding officers of the *Princess* being killed or desperately wounded, the command, according to the rules of war at that time, fell to the gunner. In 1669, he was promoted to be gunner of the *Royal Prince*, a first rate man of war. He was engaged, with his two sons Henry and John, in the battle against Van Tromp, in 1673; when the *Royal Prince* had all her masts shot away, near 400 of her men killed and disabled, and most of her upper tier of guns dismounted. As she lay thus like a wreck, a great Dutch man of war came down upon her with two fire ships, either to burn or carry her off; and Captain Rooke, afterwards Sir George, thinking it impossible to defend her, ordered the men to save their lives, and the colours to be struck. Mr Leake hearing this, ordered the lieutenant off the quarter deck, and took the command upon himself, saying, "The *Royal Prince* shall never be given up to the enemy while I am alive to defend her." The undaunted spirit of the brave gunner inspired the small residue of the ship's company with resolution; they returned with alacrity to the fight, and under the direction of this valiant gunner and his two sons sunk both the fire ships, and obliged the man of war to sheer off; and having thus saved the *Royal Prince*, he brought her into Chatham. But Mr Leake's joy in obtaining this victory was damped by the loss of Henry, his eldest son, who was killed near him. Soon after, Mr Leake was preferred to the command of a yacht, and also made gunner of Whitehall. In 1677, he obtained a grant for life of the office of master gunner of England, and storekeeper of the ordnance at Woolwich. By this post he had full scope for his genius.

He accordingly, among other things, invented the cusshee piece; and contrived to fire a mortar by the blast of a piece, which has been used ever since. He was also the principal contriver of what the French call *infernal*, used at the bombardment of St Malo's in 1693. Mr Leake had a surprising genius for all inventions of this kind; and had frequent trials of skill with French and Dutch gunners and engineers in Woolwich warren, at which King Charles II. and the duke of York were often present, and he never failed to excel all his competitors: nor was he less skilled in the art of making compositions for fireworks; of which he likewise made frequent trials with equal success.

LEAKE, *Sir John*, an English admiral, distinguished by his bravery and success, was born in 1656, and was taught mathematics and gunnery by Mr Richard Leake his father, who was master gunner of England. Entering early into the navy, he distinguished himself under his father in 1673, in the memorable engagement between Sir Edward Spragg and Van Tromp, when but 16 years of age; and being afterwards made captain, he signalized himself, among other occasions, by executing the desperate attempt of conveying some victuallers into Londonderry, which obliged the enemy to raise the siege; and at the famous battle of La Hogue. In 1702, being made commodore of a squadron, he destroyed the French trade and settlements at Newfoundland, and restored the English to the possession of the whole island. On his return he was created rear admiral; soon after, he was made vice admiral of the blue, and was afterwards knighted. He was engaged with Admiral Rooke in taking Gibraltar: soon after which, he particularly distinguished himself in the general engagement off Malaga; when commanding the leading squadron of the van, consisting only of six ships, he drove that of the enemy, consisting of 13, out of the line of battle, so disabled that they never returned to the fight. In 1705 he relieved Gibraltar, which the French had besieged by sea, and the Spaniards by land, so seasonably, that the enemy was to have attacked the town that very night in several places, and would undoubtedly have made themselves masters of it. Five hundred Spaniards had, by the help of rope ladders, climbed up the rocks by a way that was thought inaccessible. At the same time they had got a great number of boats to land 3000 men at the New Mole, who, by making a vigorous assault on the side next the sea, were to draw the garrison to oppose the attack, while the 500 concealed men rushed into the town. These being the next day drawn by hunger out of their ambuscade, were discovered; on which Sir John assisting the garrison with sailors and marines, they were attacked with such vigour, that, though they had taken an oath not to surrender to the English, 190 common soldiers and 30 officers took quarter: 200 were killed on the spot; and the rest, who endeavoured to make their escape, fell headlong down the rock. He was soon after made vice admiral of the white, and then twice relieved that fortress. The last time, he attacked five ships of the French fleet coming out of the bay, of whom two were taken, and two run ashore and were destroyed: Baron Pointi died soon after, of the wounds he received in the battle; and in a few days the enemy raised the

siege.

Leake
||
Leao.

siege. In the year 1705 Sir John was engaged in the reduction of Barcelona; and the next year relieved that city, when it was reduced to the last extremity, and obliged King Philip to raise the siege. Soon after he took the city of Carthagená; from whence proceeding to Alicant and Joyce, both these submitted to him; and he concluded the exploits of that year with the reduction of the city and island of Majorca. Upon his return home, Prince George of Denmark made him a present of a ring valued at 400l. and he had the honour of receiving 1000l. from the queen as a reward for his services. Upon the unhappy death of Sir Cloudesly Shovel, in 1707, he was made admiral of the white, and commander in chief of her majesty's fleet; and the next year, surprizing a convoy of the enemy's corn, he sent it to Barcelona, and thus saved both that city and the confederate army from the danger of famine: soon after conveying the new queen of Spain to King Charles her consort, her majesty made him a present of a diamond ring of 500l. value. He then proceeded to the island of Sardinia, which he reduced to the obedience of King Charles; and soon after assisted the lord Stanhope in the conquest of Minorca. Then returning home, he was appointed one of the council to the lord high admiral; and in 1709 was made rear admiral of Great Britain. He was several times chosen member of parliament for Rochester; and in 1712 conducted the English forces to take possession of Dunkirk. But upon the accession of King George I. he was superseded, and allowed a pension of 600l. a-year. After this he lived privately till his death, which happened at his house in Greenwich in 1720.

LEAKE, *Stephen Martin, Esq;* son of Captain Martin, went through different ranks in the heralds office till he came to be garter. He was the first person who wrote professedly on our English coins, two editions of his "Historical Account" of which were published by him with plates, under the title of *Nummi Britannici Historia*, London, 1726, 8vo.; the second, much improved, London, 1745, 8vo. He printed, in 1750, "The Life of Sir John Leake, knight, admiral of the fleet," &c. to whom he was indebted for a considerable estate; which the admiral devised to trustees for the use of his son for life; and upon his death to Captain Martin (who married Lady Leake's sister) and his heirs: By which means it came to the Captain's son; who, in gratitude to the memory of Sir John Leake, wrote an accurate account of his life, of which only 50 copies were printed. In 1766, he printed also 50 copies of "The Statutes of the Order of the Garter," 4to. He died in 1773; and was buried in his chancel in the parish church of Thorp in Essex, of which manor he was lord.

LEANDER, in poetic history, a young man of Abydos in Asia. He used to swim over the Hellespont by night to visit Hero his mistress, who set forth a light to guide him: but in a tempestuous winter night he was drowned; upon which Hero seeing him dead on the shore, cast herself headlong from the tower, and died also. See HERO.

LEAO, in *Natural History*, a mineral substance approaching to the nature of the lapis lazuli, found in the East Indies, and of great use in the Chinese por-

celain manufactures, as it affords the finest blue they are possessed of.

LEAP, in *Music*, is when the song does not proceed by conjoint degrees, as when between each note there is an interval of a third, a fourth, fifth, &c.

LEAP Year. See YEAR, and CHRONOLOGY, N^o 24.

LOVER'S LEAP. See LEUCATA.

LEAPING, or VAULTING, was an exercise much used both amongst the Greeks and Romans. The Grecians called it *Αλμα*, and performed it with weights upon their heads and shoulders. Sometimes they carried the weights in their hands, which were of different figures, but generally oval and made with holes or covered with thongs, through which the contenders put their fingers. These weights were called *άλτηρες*. The contest was who could leap the highest and farthest. The place from whence they jumped was called *βατης*, and that to which they leaped, *εσκαμμενα*, because the ground was there dug up. This exercise was performed in the same manner by the Romans.

LEAR, the name of a British king, said in old chronicles to have succeeded his father Bladud, about A. M. 3160. The story of this king and his three daughters is well known, from Shakespeare's excellent tragedy founded on it.

LEASE, from the French *laisser, demittere*, "to let," in law, a demise, or letting of lands, tenements, or hereditaments, unto another for life, term of years, or at will, for a rent reserved.

A lease is either written, called an *indenture, deed-roll, or lease* in writing; or by word of mouth, called *lease parole*.

All estates, interests of freehold, or terms for years in lands, &c. not put in writing and signed by the parties, shall have no greater effect than as estates at will; unless it be of leases not exceeding three years from the making; wherein the rent reserved shall be two thirds of the value of the things demised. Leases exceeding three years must be made in writing; and if the substance of a lease be put in writing, and signed by the parties, though it be not sealed, it shall have the effect of a lease for years, &c.

An *assignment* differs from a lease only in this, that by a lease one grants an interest less than his own, reserving to himself a reversion; in assignments he parts with the whole property, and the assignee stands to all intents and purposes in place of the assignor.

LEASE, in *Scots Law*. See TACK.

LEASE and *Release*, a species of conveyance used in the English law, first invented by Serjeant Moore, soon after the statute of uses, and now the most common of any, and therefore not to be shaken; though very great lawyers (as particularly Mr Noy) have formerly doubted its validity. It is thus contrived: A lease, or rather bargain and sale, upon some pecuniary consideration, for one year, is made by the tenant of the freehold to the lessee or bargainee. Now this without any enrolment, makes the bargainor stand seized to the use of the bargainee, and vests in the bargainee the *use* of the term for a year; and then the statute immediately annexes the *possession*. He therefore, being thus in possession, is capable of receiving a release of the freehold and reversion, which must

Leap
||
Leafe

Leath
||
Leather

must be made to a tenant in possession: and accordingly, the next day, a release is granted to him. This is held to supply the place of livery of seisin; and so a conveyance by lease and release is said to amount to a feoffment.

LEASH, among sportsmen, denotes three creatures of any kind; but chiefly greyhounds, foxes, bucks, and hares.

The term *leash* also signifies a line to hold in a hunting dog; and a small long thong of leather, by which a falconer holds his hawk.

LEASING-MAKING, in *Scots Law*, the uttering of words tending to excite discord between the king and his people; also called *verbal sedition*.

LEATHER, the skin of several sorts of beasts dressed and prepared for the use of various manufacturers, whose business it is to make them up.

Dyeing of LEATHER, Skins, &c. Blue is given by steeping the subject a day in urine and indigo, then boiling it with alum: or it may be given by tempering the indigo with red wine, and washing the skins therewith. Red is given by washing the skins, and laying them two hours in galls, then wringing them out, dipping them in a liquor made with ligustrum, alum, and verdigris in water; and lastly, in a dye made of Brazil wood, boiled with ley. Purple is given by wetting the skins with a solution of roche alum in warm water; and, when dry again, rubbing them with the hand with a decoction of logwood in colder. Green is given by smearing the skin with sap-green and alum-water boiled. Dark green is also given with steel filings and sal ammoniac steeped in urine till soft, then smeared over the skin; which is to be dried in the shade. Sky colour is given with indigo steeped in boiling water, and the next morning warmed and smeared over the skin. Yellow, by smearing the skin over with aloes and linseed oil dissolved and strained; or by infusing it in weld. Orange colour is given by smearing with fustic berries boiled in alum water; or, for a deep orange, with turmeric.

Processes for Dyeing LEATHER Red and Yellow as practised in Turkey, with directions for Preparing and Tanning the Skins; as communicated by Mr Philippo, a native of Armenia, who received from the Society for the Encouragement of Arts, &c. one hundred pounds, and also the gold medal of the Society, as a reward for discovering this secret.

1. *First Preparation of the Skins, both for Red and Yellow Leather, by dressing them in Lime.* Let the skins, dried with the hair on, be first laid to soak in clean water for three days; let them then be broken over the flesh side, put into fresh water for two days longer, and afterwards hung up to drain half an hour. Let them now be broken on the flesh side, limed in cold lime on the same side, and doubled together with the grain side outward. In this state they must be hung up within doors over a frame for five or six days, till the hair be loose; which must then be taken off, and the skins returned into the lime pit for about three weeks. Take them out, and let them be well worked flesh and grain, every sixth or seventh day during that time: after which, let them be washed ten times in clear water, changing the water at each washing. They are next to be prepared in drench, as below mentioned.

VOL. XI. Part II.

2. *Second Preparation of the Skins for both the Red and Yellow Dyes by drenching.* After squeezing the water out of the skins, put them into a mixture of bran and water, warm as new milk, in the following proportions; viz. about three pounds of bran for five skins, and water sufficient to make the mixture moderately fluid, which will be about a gallon to each pound of bran. In this drench let the skins lie three days; at the end of which time they must be well worked, and afterwards returned into the drench two days longer. They must then be taken out and rubbed between the hands; the water squeezed from them, and the bran scraped off clear from both sides of the skins. After this they must be again washed ten times in clear water, and the water squeezed out of them.

Thus far the preparatory process of all the skins, whether intended to be dyed red or yellow, is the same; but afterwards those which are to be dyed red, must be treated as follows.

3. *Preparation in Honey and Bran of Skins that are to be dyed Red.* Mix one pound of honey with three pints of lukewarm water, and stir them together till the honey is dissolved. Then add two double handfuls of bran; and taking four skins (for which the above quantity of the mixture will be sufficient) work them well in it one after another. Afterwards fold up each skin separately into a round form, with the flesh side inwards; and lay them in an earthen pan, or other proper vessel; if in the summer, by the side of each other; but in the winter, on the top of each other. Place the vessel in a sloping position, so that such part of the fluid as may spontaneously drain from the skins, may pass from them. An acid fermentation will then rise in the liquor, and the skins will swell considerably. In this state they must continue for seven or eight days; but the moisture that drains from them must be poured off, once or twice a-day, as occasion may require. After this a further preparation in salt is necessary; and which must be performed in the following manner.

4. *Preparation in Salt, of the Skins to be dyed Red.* After the skins have been fermented in the honey and bran, as above mentioned, let them be taken out of that mixture on the eighth or ninth day, and well rubbed with dry common sea salt, in the proportion of about half a pound to each skin; the salt must be well rubbed and worked with them. This will make them contract again, and part with a further considerable quantity of moisture; which must be squeezed out by drawing each skin separately through the hands. They must next be scraped clean on both sides from the bran, superfluous salt, and moisture that may adhere to them. After which, dry salt must be strewed over the grain-side, and well rubbed in with the hand. They are then to be doubled with the flesh side outwards, lengthwise from neck to tail, and a little more dry salt must be thinly strewed over the flesh side, and rubbed in; for the two last operations, about a pound and a half of salt will be sufficient for each skin. They must then be put, thus folded on each other, between two clean boards, placed sloping, breadthwise; and a heavy weight laid on the upper board, in order gradually to press out what moisture they will thus part with. In this state of pressure, they must be continued two days

Leather. or longer, till it is convenient to dye them, for which they will then be duly prepared.

5. *Preparation of the Red Dye, in a proper proportion for four Skins.* Put eight gallons of water into a copper, with seven ounces of shenan (A) tied up in a linen bag. Light a fire under a copper; and when the water has boiled about a quarter of an hour, take out the bag of shenan, and put into the boiling fluid or lissivium, 1st, Two drams of alum; 2dly, Two drams pomegranate bark; 3dly, Three quarters of an ounce of turmeric; 4thly, Three ounces of cochineal; 5thly, Two ounces of loaf sugar. Let the whole mixture boil about six minutes, then cover the fire, and take out a quart of liquor, putting it into a flat earthen pan; and when it is as cold as new milk, take one skin, folded lengthwise, the grain side outwards, and dip it in the liquor, rubbing it gently with the hands. Then taking out the skin, hang it up to drain, and throw away the superfluous dye. Proceed in the same manner with the remaining three skins; repeating the operation of each skin separately, eight times, squeezing the skins by drawing them through the hands before each fresh dipping. Lay them now on one side of a large pan, set sloping, to drain off as much of the moisture as will run from them without pressure, for about two hours, or till they are cold; then tan them as below directed.

6. *Tanning the Red Skins.* Powder four ounces of the best white galls in a marble mortar, sifting it through a fine sieve. Mix the powder with about three quarts of water, and work the skins well in this mixture for half an hour or more, folding up the skins fourfold. Let them lie in this tan for 24 hours; when they must be worked again as before; then taken out, scraped clean on both sides from the first galls, and put into a like quantity of fresh galls and water. In this fresh mixture they must be again well worked for three quarters of an hour; then folded up as before, and left in the fresh tan for three days. On the fourth day they must be taken out, washed clean from the galls in seven or eight fresh quantities of water, and then hung up to dry.

7. *Manner of Dressing the Skins after they are tanned.* When the skins have been treated as above, and are very near dry, they should be scraped with the proper instrument or scraper on the flesh side, to reduce them to a proper degree of thickness. They are then to be laid on a smooth board, and glazed by rubbing them with a smooth glass. After which they must be oiled, by rubbing them with olive oil, by means of a linen rag, in the proportion of one ounce and a half of oil

for four skins: they are then to be grained on a graining board, lengthwise, breadthwise, and cornerwise, or from corner to corner.

8. *Preparations with Galls, for the Skins to be dyed Yellow.* After the four skins are taken out of the drench of bran, and clean washed as before directed in the second article, they must be very well worked, half an hour or more, in a mixture of a pound and a half of the best white galls, finely powdered, with two quarts of clean water. The skins are then to be separately doubled lengthwise, rolled up with the flesh side outwards, laid in the mixture, and close pressed down on each other, in which state they must continue two whole days. On the third day let them be again worked in the tan; and afterwards scraped clean from the galls, with an ivory or brass instrument (for no iron must touch them). They must then be put into a fresh tan, made of two pounds of galls finely powdered, with about three quarts of water, and well worked therein 15 times. After this they must be doubled, rolled up as before, and laid in the second tan for three days. On the third day a quarter of a pound of white sea-salt must be worked into each skin; and the skins doubled up as before, and returned into the tan, till the day following, when they are to be taken out, and well washed six times in cold water, and four times in water lukewarm. The water must be then well squeezed out, by laying the skins under pressure, for about half an hour, between two boards, with a weight of about 200 or 300 pounds laid upon the uppermost board, when they will be ready for the dye.

9. *Preparation of the Yellow Dye, in the proper proportion for four Skins.* Mix six ounces of cassiari gehira (B), or dgehora, or the berries of the eastern rhamnus, with the same quantity of alum; and pound them together till they be fine, in a marble or brass mortar, with a brass pestle. Then dividing the materials, thus powdered, into three equal parts of four ounces each, put one of those three parts into about a pint and a half of water, in a china or earthen vessel, and stir the mixture together. Let the fluid stand to cool, till it will not scald the hand. Then spreading one of the skins flat on a table, in a warm room, with the grain-side uppermost, pour a fourth part of the tinging liquor, prepared as above directed, over the upper or grain-side, spreading it equally over the skin with the hand, and rubbing it well in. Afterwards do the like with the other three skins, for which the mixture first made will be sufficient.

This operation must be repeated twice more on each skin

(A) Shenan is a drug much used by dyers in the east; and may easily be procured at any of the ports of Syria and Africa, in the Levant. It is the eastern jointed-kali, called by botanists *salicornia*; and grows in great plenty in those and other parts of the east. There is a lesser species of the *salicornia* on our coast, which, from its great affinity with the shenan, might be presumed to have the same qualities. On some trials, however, it has not appeared to answer the intention of the shenan; but it will not be prudent to pursue the examination of this further, as some unknown circumstances in the collecting or using the English *salicornia* might occasion the miscarriage. But be this as it may, the eastern shenan may, at all events, be easily procured in any quantity, at a very trifling expence, by any of the captains of Turkey ships, at Aleppo, Smyrna, &c.

(B) The cassiari gehira is the berries of an eastern rhamnus, or buckthorn tree; and may be had at Aleppo, and other parts of the Levant, at a small price. The common Avignon or yellow berries may be substituted, but not with so good an effect; the cassiari gehira being a stronger and brighter yellow dye, both for this use and also that of colouring paper hangings, &c.

Leather. skin separately, with the remaining eight ounces of the powder of the berries, and alum, with the above-mentioned due proportions of hot water, put to them as before directed.

The skins, when dyed, are to be hung up on a wooden frame, without being folded, with the grain-side outwards, about three quarters of an hour to drain; when they must be carried to a river or stream of running water, and well washed therein six times or more. After this they must be put under pressure for about an hour, till the water be well squeezed out; afterwards the skins must be hung up to dry in a warm room.

This being done, the skins are to be dressed and grained as before directed for those dyed red; except the oiling, which must be omitted.

Blacking LEATHER. In the tanning of leather it is so much impregnated with the astringent parts of oak bark, or with that matter which strikes a black with green vitriol, that rubbing it over three or four times with a solution of the vitriol, or with a solution of iron made in vegetable acids, is sufficient for staining it black. Of this we may be convinced by dropping a little of the solution on the unblackened side of common shoe leather. This operation is performed by the currier; who, after the colouring, gives a gloss to the leather with a solution of gum arabic and size made in vinegar. Where the previous astringent impregnation is insufficient to give due colour, and for those sorts of leather which have not been tanned, some galls or other astringents are added to the solution of iron; and in many cases, particularly for the finer sorts of leather, and for renewing the blackness, ivory or lamp-black are used. A mixture of either of these with linseed oil makes the common oil blacking. For a shining blacking, small beer or water are taken instead of oil, in the quantity of about a pint to an ounce of the ivory black, with an addition of half an ounce of brown sugar and as much gum arabic. The white of an egg, substituted for the gum, makes the black more shining, but is supposed to hurt the leather, and make it apt to crack. It must be obvious, however, that all these compositions admit of a great many variations.

Gilding of LEATHER. Take glair of the whites of eggs, or gum water, and with a brush rub over the leather with either of them: then lay on the gold or silver, and, letting them dry, burnish them. See the articles GILDING and BURNISHING.

To dress or cover LEATHER with Silver or Gold Take brown-red; grind or move it on a stone with a miller, adding water and chalk; and when the latter is dissolved, rub or lightly daub the leather over with it, till it looks a little whitish; and then lay on the leaf-silver or gold before the leather is quite dry, laying the leaves a little over each other, that there may not be the least part uncovered; and when they have well closed with the leather, and are sufficiently dried on and hardened, rub them over with an ivory polisher, or the foretooth of a horse.

By several statutes, regulations are made for the tanning and manufacturing of leather; and by the 27th Geo. III. c. 13. a duty is laid upon all hides and skins imported, and drawbacks allowed on the exportation thereof. Several duties are also imposed on hides and skins tanned in Great Britain, of what kind soever, as

set forth in schedules annexed to the said act. By the 23 Geo. III. c. 37. further regulations are made respecting the said duties, which are under the management of the officers of excise.

Leaven
||
Leccc.

LEAVEN, a piece of four dough, used to ferment and render light a much larger quantity of dough or paste. See BREAD, BARM, and BAKING.

Leaven was strictly forbidden by the law of Moses during the seven days of the passover; and the Jews, in obedience to this law, very carefully purified their houses from all leaven as soon as the vigil of the feast began. Nothing of honey or leaven was to have place in any thing presented to the Lord, upon his altar, during this solemnity. If, during the feast, the least particle of leaven was found in their houses, they imagined the whole was polluted, for a little leaven leaveneth the whole lump. Leaven, in its figurative sense, signifies the bad passions of envy and malice, and rancour, which sour the temper, and extend their ferment over the social affections; whereas unleavened bread implies sincerity and truth. It is frequently used for any kind of moral contagion.

LEAVES OF PLANTS. See LEAF.

Colours extracted from LEAVES. See COLOUR-Making, N^o 37.

LEBADEA, or **LEBADIA**, an ancient town of Bœotia, on the borders of Phocis, situated between Helicon and Charonea, near Coronæa. In it stood the oracle of Jupiter Trophonius, which whoever went to consult, descended into a subterraneous gulf.

LEBEDA, an ancient sea port town of Africa, in the kingdom of Tripoli, with a pretty good harbour, and an old castle, seated on the Mediterranean sea; in E. Long. 14. 50. N. Lat. 52. 10.

LEBEDOS, reckoned among the twelve ancient cities of Ionia, was situated to the south of Smyrna. It was the residence of stage-players, and the place where they met from all parts of Ionia, as far as the Hellespont, and celebrated annual games in honour of Bacchus, (Strabo). It was overthrown by Lyfimachus, who removed the inhabitants to Ephesus; scarce ever after recovering itself, and becoming rather a village than a town, (Horace.)

LEBEN, or **LEBENA**, in *Ancient Geography*, one of the port towns of the Gortynians, near the promontory Leon, on the south-east side of Crete; famous for a temple of Æsculapius in imitation of that of Cyrenaica.

LEBRIXA, an ancient, strong, and pleasant town of Spain, in Andalusia; seated on a territory abounding in corn, wine, and a great number of olive trees, of whose fruit they make the best oil in Spain. W. Long. 5. 32. N. Lat. 36. 52.

LEBUS, a town of Germany, in the circle of Upper Saxony, and in the marquisate of Brandenburg, with a bishop's see, secularized in favour of the house of Brandenburg. It is seated on the river Oder, in E. Long. 14. 55. N. Lat. 52. 28.

LECCE, a rich, populous, and most beautiful town of Italy, in the kingdom of Naples and in the Terra d'Otranto, of which it is the chief place, and the see of a bishop. E. Long. 18. 20. N. Lat. 40. 38.

LECCO, a town of Italy in the duchy of Milan, seated on the eastern side of the lake Como. E. Long. 9. 40. N. Lat. 45. 45.

Lechlade
||
Lecturers.

Leda
||
Lee.

LECHLADE, a town of Gloucestershire in England, seated at the confluence of the rivers Lech and Thames. W. Long. 2. 15. N. Lat. 51. 42.

LECHNICH, a town of Germany, in the circle of the lower Rhine, and in the electorate of Cologne. E. Long. 6. 35. N. Lat. 50. 40.

LECTI, beds or couches, were of two kinds amongst the Romans, as being destined to two different uses, to lie upon at entertainments, and to repose upon for nightly rest. The first were called *lecti tricliniaries*, the other *lecti cubicularii*. See **BEDS**.

LECTICA, was a litter or vehicle in which the Romans were carried. It was of two kinds, covered and uncovered. The covered lectica is called by Pliny *cubiculum viatorum*, a traveller's bedchamber: And indeed we are informed that Augustus frequently ordered his servants to stop his litter that he might sleep upon the road. This vehicle was carried by six or eight men called *lecticarii*. The lectica differed from the *SELLA*, for in the first the traveller could recline himself for sleep, in the latter he was obliged to sit. The lectica was invented in Bithynia; the sella was a Roman machine, and esteemed the more honourable of the two. Lectica was also the name of the funeral bed or bier for carrying out the dead.

LECTICARII, among the Romans, servants who carried the **LECTICA**.

LECTICARIUS was also an officer in the Greek church, whose business it was to bear off the bodies of those who died, and to bury them. These were otherwise denominated *decani* and *copiatae*.

LECTIO, *Reading*. Considered in a medicinal view, it is said by Celsus, lib. i. cap. 4. to be bad, especially after supper, for those whose heads are weak; and in lib. i. cap. 8. he recommends reading with an audible voice for such as have weak stomachs. It is also directed by Paulus Æginetus as an exercise, lib. i. cap. 19.

LECTISTERNIUM, a solemn ceremony observed by the Romans in times of public danger, wherein an entertainment was prepared with great magnificence, and served up in the temples. The gods were invited to partake of the good cheer, and their statues placed upon couches round the table in the same manner as men used to sit at meat. The first lectisternium held at Rome was in honour of Apollo, Latona, Diana, Hercules, Mercury, and Neptune, to put a stop to a contagious distemper which raged amongst the cattle, in the year of Rome 354. At these feasts the *Epulones* presided, and the sacred banquet was called *epulum*. See **EPULO**, **EPULUM**, &c.

Something like the lectisternium was occasionally observed amongst the Greeks, according to Casaubon.

LECTORES, among the Romans, servants in great men's houses, who were employed in reading while their masters were at supper. They were called by the Greeks **ANAGNOSTÆ**.

LECTOURE, an ancient and strong town of France, in Gascony, with a castle and a bishop's see; seated on a mountain, at the foot of which runs the river Gers. E. Long. 0. 42. N. Lat. 43. 56.

LECTURERS, in England, are an order of preachers in parish churches, distinct from the rector, vicar, and curate. They are chosen by the vestry, or chief

inhabitants of the parish, supported by voluntary subscriptions and legacies, and are usually the afternoon preachers in the Sunday service. The term is also more generally applied to those who preach on Sunday, or on any stated day of the week, in churches, or other places of public worship. By 13 and 14 Car. II. cap. 4. lecturers in churches, unlicensed, and not conforming to the liturgy, shall be disabled, and shall also suffer three months imprisonment in the common gaol; and two justices, or the mayor in a town corporate, shall, upon certificate from the ordinary, commit them accordingly. Where there are lectures founded by the donations of pious persons, the lecturers are appointed by the founders without any interposition or consent of rectors of churches, &c. though with the leave and approbation of the bishop; such as that of Lady Moyer's at St Paul's. But the lecturer is not entitled to the pulpit, without the consent of the rector or vicar, who is possessed of the freehold of the church.

LEDA, in fabulous history, a daughter of King Thepius and Eurythemis, who married Tyndarus king of Sparta. She was seen bathing in the river Eurotas by Jupiter, when she was some few days advanced in her pregnancy, and the god, struck with her beauty, resolved to deceive her. He persuaded Venus to change herself into an eagle, while he assumed the form of a swan, and after this metamorphosis Jupiter, as if fearful of the tyrannical cruelty of the bird of prey, fled through the air into the arms of Leda, who willingly sheltered the trembling swan from the assaults of his superior enemy. The caresses with which the naked Leda received the swan, enabled Jupiter to avail himself of his situation, and nine months after this adventure the wife of Tyndarus brought forth two eggs, of one of which sprung Pollux and Helena, and of the other Castor and Clytemnestra. The two former were deemed the offspring of Jupiter, and the others claimed Tyndarus for their father. Some mythologists attribute this amour to Nemesis and not to Leda; and they farther mention, that Leda was intrusted with the education of the children which sprung from the eggs brought forth by Nemesis. To reconcile this diversity of opinions, others maintain that Leda received the name of *Nemesis* after death. Homer and Hesiod make no mention of the metamorphosis of Jupiter into a swan, whence some have imagined that the fable was unknown to those two ancient poets, and probably invented since their age.

LEDBURY, a town of Herefordshire in England. It is a well built town, seated on a rich clay soil, and inhabited mostly by clothiers, who carry on a pretty large trade. W. Long. 2. 27. N. Lat. 52. 6.

LEDESMA, an ancient and strong town of Spain, in the kingdom of Leon, seated on the river Tome, in W. Long. 5. 25. N. Lat. 47. 2.

LEDGER, the principal book wherein merchants enter their accounts. See **BOOK-KEEPING**.

LEDUM, **MARSH CISTUS**, or *Wild Rosemary*; a genus of plants belonging to the decandria class; and in the natural method ranking under the 18th order, *Bicornes*. See **BOTANY INDEX**.

LEE, an epithet used by seamen to distinguish that part of the hemisphere to which the wind is directed, from the other part whence it arises; which latter is accordingly called *to windward*. This expression is chiefly

Lee. chiefly used when the wind crosses the line of a ship's course, so that all on a side of her is called *to windward*, and all on the opposite side *to leeward*. Hence,

Under the LEE, implies farther to the leeward, or farther from that part of the horizon whence the wind blows: as,

Under the LEE of the Shore; i. e. at a short distance from the shore which lies to windward. This phrase is commonly understood to express the situation of a vessel anchored, or sailing under the weather-shore, where there is always smoother water, and less danger of heavy seas, than at a great distance from it.

LEE Larches, the sudden and violent rolls which a ship often takes to the leeward in a high sea, particularly when a large wave strikes her on the weather-side.

LEE-Side, all that part of a ship or boat which lies between the mast and the side farthest from the direction of the wind; or otherwise, that half of a ship which is pressed down towards the water by the effort of the sails, as separated from the other half by a line drawn through the middle of her length. That part of the ship which lies to windward of this line is accordingly called the *weather-side*. Thus admit a ship to be sailing southward, with the wind at east, then is her starboard or right side the *lee-side*; and the larboard, or left, the *weather-side*.

LEE-Stone. See *LEE-Penny*.

LEE-Way. See *NAVIGATION*.

LEE, NATHANIEL, a very eminent dramatic poet of the last century, was the son of a clergyman, who gave him a liberal education.—He received his first rudiments of learning at Westminster school; from whence he went to Trinity college, Cambridge.—Coming to London, however, his inclination prompted him to appear on the theatre; but he was not more successful in representing the thoughts of other men, than many a genius besides, who have been equally unfortunate in treading the stage, although they knew so well how to write for it. He produced 11 tragedies, all of which contain a very great portion of true poetic enthusiasm. None, if any, ever felt the passion of love more truly; nor could any one describe it with more tenderness. Addison commends his genius highly; observing, that none of our English poets had a happier turn for tragedy, although his natural fire and unbridled impetuosity hurried him beyond all bounds of probability, and sometimes were quite out of nature. The truth is, this poet's imagination ran away with his reason; so that at length he became quite crazy; and grew so mad, that his friends were obliged to confine him in bedlam, where he made that famous witty reply to a coxcomb scribbler, who had the cruelty to jeer him with his misfortune, by observing that it was an easy thing to write like a madman:—"No (said Lee), it is not an easy thing to write like a madman; but it is very easy to write like a fool." Lee had the good fortune to recover the use of his reason so far as to be discharged from his melancholy confinement; but he did not long survive his enlargement, dying at the early age of 34. Cibber, in his *Lives of the Poets*, says he perished unfortunately in a night ramble in London streets.—His Theodosius and Alexander the Great are stock plays, and to this day are often acted with great applause. The late Mr

Barry was particularly fortunate in the character of *Lee-Penny* the Macedonian hero.

LEE-Penny, or *Lee-stone*, a curious piece of antiquity belonging to the family of Lee in Scotland, and of which the following account has been given in the *Gentleman's Magazine* for December 1787.

It is a stone of a dark red colour and triangular shape, and its size about half an inch each side. It is set in a piece of silver coin, which, though much defaced, by some letters still remaining is supposed to be a shilling of Edward I. the cross being very plain, as it is on his shillings.—It has been, by tradition, in the Lee family since the year 1320; that is, a little after the death of King Robert Bruce, who having ordered his heart to be carried to the Holy Land, there to be buried, one of the noble family of Douglas was sent with it, and it is said got the crowned heart in his arms from that circumstance: but the person who carried the heart was Simon Locard of Lee, who just about this time borrowed a large sum of money from Sir William de Lendfay, prior of Air, for which he granted a bond of annuity of ten pounds of silver, during the life of the said Sir William de Lendfay, out of his lands of Lee and Cartland. The original bond, dated 1323, and witnessed by the principal nobility of the country, is still remaining among the family papers.

As this was a great sum in those days, it is thought it was borrowed for that expedition; and, from his being the person who carried the royal heart, he changed his name to *Lockheart*, as it is sometimes spelled, or *Lockhart*, and got a heart within a lock for part of his arms, with the motto *Corda serata pando*.—This Simon Lockhart having taken prisoner a Saracen prince or chief, his wife came to ransom him; and on counting out the money or jewels, this stone fell out of her purse, which she hastily snatched up; which Simon Lockhart observing, insisted to have it, else he would not give up his prisoner.—Upon this the lady gave it him, and told him its many virtues, viz. that it cured all diseases in cattle, and the bite of a mad dog both in man and beast. It is used by dipping the stone in water, which is given to the diseased cattle to drink; and the person who has been bit, and the wound or part infected, is washed with the water. There are no words used in the dipping of the stone, or any money taken by the servants, without incurring the owner's displeasure. Many are the cures said to be performed by it, and people come from all parts of Scotland, and even as far up in England as Yorkshire, to get the water in which the stone is dipped, to give their cattle, when ill of the murrain especially, and black-leg.—A great many years ago, a complaint was made to the ecclesiastical courts against the laird of Lee, then Sir James Lockhart, for using witchcraft.—It is said, when the plague was last at Newcastle, the inhabitants sent for the Lee-penny, and gave a bond for a large sum in trust for the loan; and that they thought it did so much good, that they offered to pay the money, and keep the Lee-penny; but the gentleman would not part with it. A copy of this bond is very well attested to have been among the family papers, but supposed to have been spoiled, along with many more valuable ones, about 50 years ago, by rain getting into the charter room, during a long minority, and no family residing at Lee.

Leech.
Leeds.

We have given this history, not on account of the utility of the information, but as a proof of the superfluity of the times. None of the virtues which the leech was formerly supposed to possess, are now ascribed to it, excepting, we believe, in the case of some of the diseases of cattle; and even these in more enlightened times will become daily less numerous and less powerful.

LEECH, in *Zoology*. See **HIRUDO**, **HELMINTHOLOGY Index**.

LEECHES, in a ship, the borders or edges of a sail which are either sloping or perpendicular.

The leeches of all sails whose tops and bottoms are parallel to the deck, or at right angles to the mast, are denominated from the ship's side, and the sail to which they belong; as the *starboard* leech of the main-sail, the *lee* leech of the fore-top sail, &c. But the sails which are fixed obliquely on the masts have their leeches named from their situation with respect to the ship's length; as the *fore* leech of the mizen, the *after*-leech of the jib or fore-stay sail, &c.

LEECH Lines, certain ropes fastened to the middle of the leeches of the main-sail and fore-sail, and communicating with blocks under the opposite sides of the top, whence they pass downwards to the deck, serving to truss up those sails to the yard as occasion requires. See **BRAILS**.

LEECH-Rope, a name given to that part of the bolt-rope to which the border or skirt of a sail is sewed. In all sails whose opposite leeches are of the same length, it is terminated above the earing, and below the clue. See **BOLT-Rope**, **CLUE**, and **EARING**.

LEEDS, a town of the west riding of Yorkshire, 196 miles from London, has a magnificent stone bridge over the river Aire to the suburbs. It was incorporated by King Charles I. with a chief alderman, nine burgeses, and 20 assistants; and by Charles II. with a mayor, 12 aldermen, and 24 assistants. It has been a long time famous for the woollen manufacture, and is one of the largest and most flourishing towns in the county, yet had but one church till the reign of Charles I. By means of inland navigation, it has communication with the rivers Mersey, Dee, Ribble, Ouse, Trent, Darwent, Severn, Humber, Thames, Avon, &c. which navigation, including its windings, extends above 500 miles in the counties of Lincoln, Nottingham, Lancaster, Westmorland, Chester, Stafford, Warwick, Leicester, Oxford, Worcester, &c. Here is a long street full of shops, and a hall for the sale of cloth, built in 1758. The merchants of this place, York, and Hull, ship them off at the latter port, for Holland, Hamburg, and the north. After ringing of the market-bell at six or seven in the morning, the chapmen come and match their patterns, when they treat for the cloth with a whisper; and perhaps 20,000l. worth of cloth is sold in an hour's time. At half an hour after eight the bell rings again, when the clothiers make room for the linen-drainers, hardware men, shoemakers, fruiterers, &c. At the same time the shambles are well stored with all sorts of fish and flesh; and 500 horse loads of apples have been counted here in a day. There is a magnificent hall, where they also sell great quantities of white cloth; and here is a noble guildhall, with a fine marble statue of Queen Anne, erected about the year 1714.

Its river being navigable by boats, they send other goods, besides their cloth, to Wakefield, York, and Hull, and furnish York with coals. There is a house called *Red hall*, because it was the first brick building in the town, and King Charles I. had an apartment in it, which is ever since called the *King's chamber*. There is another place called *Tower hill*, on which there was once a tower; besides which, there was a castle which King Stephen besieged in his march to Scotland. Here was also a park, where are now inclosures. There is a workhouse here of free stone, where poor children are taught to mix wool, and perform other easy branches of that manufacture, and a part of it has been used many years as an hospital for the reception of the aged poor. Here are three alms houses, and two charity schools of blue coat boys to the number of 100. In the ceiling of St Peter's, its only parochial church, the delivery of the law to Moses is finely painted in fresco by Parmentier. It is a venerable free stone pile built in the cathedral fashion, and seems to have been the patch work of several ages. The increase of building in Leeds in the year 1786, was nearly 400 houses. There is a Presbyterian meeting-house here, erected in 1691, called the *new chapel*, which is the stateliest, if not the oldest, of that denomination in the north of England: and in the town and its suburbs are several other meeting-houses, as is always observable in towns of great trade and manufacture. It is noted for some medicinal springs; one of which, called *St Peter's*, is very cold, and has been found very beneficial in rheumatism, rickets, &c. Here is an hospital for relief of the poor who had been honest and industrious, endowed with 80l. a year, besides 10l. a year for a master to read prayers and instruct them; also a free school. Its markets are Tuesdays and Saturdays, and the market-laws are more strictly observed here than anywhere. It has two fairs in the year. Leeds, though a large town, sends no members to parliament.

LEEK. See **ALLIUM**, **BOTANY Index**; and for its culture see **GARDENING**.

LEEK, a town of Staffordshire in England, 155 miles from London. It lies among the barren moorlands, has a manufacture of buttons, a market on Wednesday, and seven fairs in the year. In the churchyard, at the south-east corner of the chancel, are the remains of a Danish cross, now upright, and 10 feet high from the ground, beneath which are three steps. In Blue-hills in the neighbourhood are coal mines; and a salt stream comes from thence, which tinges the stones and earth through which it runs with a rusty colour, and, with the infusion of galls, turns as black as ink. Here are rocks of a most surprising height, without any turf or mould upon them.

LEEK, in glass-making, a sort of third furnace, intended to anneal and cool by proper degrees the vessels when made. This properly comprehends two parts, the tower and leek. The tower is that part which lies directly above the melting furnace, with a partition between them of a foot thick, in the midst whereof there is a round hole, placed exactly over the furnace, through which the flame and heat pass into the tower: on the floor of this tower the vessels are set to anneal. There are two openings by which the vessels are put into this tower; and after standing there

Leek
||
Leek.

^{Lees}
^{||}
^{Leetakoo.} some time, they are put into iron pans, which by degrees are drawn out all along that part of this furnace, which is properly called the *leer*; which is five or six yards long, that the vessels may cool by degrees. This leer is continued to its tower and arched all along, and is about four feet wide, and high within. The glasses are cool by that time they are come to the mouth of this, which enters into a room where the glasses are placed are taken out.

LEES. the grossest and most penderous parts of liquors, which, being separated by fermentation, fall to the bottom. The word comes from the French *lie*; and that either from *limus* "mud," or from *Lyeus* one of the surnames of Bacchus; or, according to Du Cange, from *la*, a corrupt Latin word signifying the fame.—The vinegar-makers make a great trade of the lees of wine dried and made into cakes, after having squeezed out the remains of the liquor in presses.

LEET, or COURT LEET (*leta vijus franci plegii*), is a court of record, ordained for punishing offences against the crown; and is said to be the most ancient court of the land. It inquires of all offences under high treason; but those who are to be punished with loss of life or member, are only inquirable and presentable here, and to be certified over to the justices of assize, (Stat. 1. Edw. III.). And this court is called the view of frank pledge, because the king is to be there certified by the view of the steward, how many people are within every leet, and have an account of their good manners and government; and every person of the age of 12 years, who hath remained there for a year and a day, may be sworn to be faithful to the king, and the people are to be kept in peace, &c. A leet is incident to a hundred, as a court baron to a manor: for by grant of a hundred, a leet passeth; and a hundred cannot be without a leet.—The usual method of punishment in the court leet, is by fine and amercement; the former assessed by the steward, and the latter by the jury.

LEETAKOO, a considerable town in southern Africa, situated in 26° 30' S. Lat. and 27° E. Long. A river runs through the middle of it, which from the extent of the channel must be sometimes of considerable magnitude. This town, which was discovered by a mission from the Cape of Good Hope in 1801 and 1802, is computed to be fully of as great extent as Cape Town; but the exact number of the houses, says Mr Barrow, could not be ascertained, owing to the irregularity of the streets and the lowness of the buildings. It contains, according to some, about 10,000 inhabitants of all descriptions, while others make them amount to nearly 15,000. The ground plan of every house is a complete circle, from 12 to 15 feet diameter; the floor consists of hard beaten clay, raised four inches above the surface of the enclosure. One-fourth of it, commonly facing the east, is entirely open, the other three-fourths walled up with clay and stones, to the height of about five feet. The people deposit their valuable articles in another apartment described with the same radius as the former, such as skin clothing, ivory ornaments, knives and other articles, which to them are of essential service. In this also the elder part of the family take their repose, and the children sleep in the half-closed *viranda*.

The whole house is covered with a roof in the form of a tent, supported by poles built into the wall. The

roof is thatched with reeds, bound together with leather thongs. The inhabitants preserve their grain and pulse in large clay vessels adjacent to the house, exhibiting the appearance of large oil jars, and some of them containing about 200 gallons.

The regularity and decorum with which the people of Leetakoo conduct themselves, give a very favourable opinion of them, as being greatly superior to savages, and evince them to be bordering on a state of civilization which it would be no difficult matter to introduce among them. They are friendly, peaceable, and inoffensive, and appear to live under a government which may be denominated purely patriarchal, and the chief of consequence must be the idol of the people. They do not appear to have any particular form of religious worship, in the common acceptation of that word, yet they circumcise all male children, and dance in a circle the whole night of the full moon. They seem also to believe that there is a power directing the operations of nature, who is infinitely superior to themselves, and to whose influence they are subject. *Barrow's Travels to Cochinchina.* Appendix.

LEEWARD *Ship*, a vessel that falls much to leeward of her course, when sailing close hauled, and consequently loses much ground.

TO LEEWARD, towards that part of the horizon which lies under the lee, or whither the wind bloweth. Thus, "We saw a fleet under the lee," and, "We saw a fleet to leeward," are synonymous expressions.

LEG, in *Anatomy*, the whole lesser extremity from the acetabula of the ossa innominata, commonly divided into three parts, viz. the thigh, the leg properly so called, and the foot. See ANATOMY, N° 60.

LEGACY, in *Scots Law*, a donation by one person to another, to be paid by the giver's executor after his death. See LAW, N° clxxx. 3.

LEGATE, a cardinal or bishop, whom the pope sends as his ambassador to sovereign princes. See AMBASSADOR.

There are three kinds of legates, viz. legates à latere, legates de latere, and legates by office, or *legati nati*: of these the most considerable are the legates à latere, the next are the legates de latere. See the article LATERE.

Legates by office are those who have not any particular legation given them; but who, by virtue of their dignity and rank in the church, become legates: such are the archbishop of Rheims and Arles: but the authority of these legates is much inferior to that of the legates à latere.

The power of a legate is sometimes given without the title. Some of the nuncios are invested with it. It was one of the ecclesiastical privileges of England from the Norman conquest, that no foreign legate should be obtruded upon the English, unless the king should desire it upon some extraordinary emergency, as when a case was too difficult for the English prelates to determine.

The term *legate* comes from *legatus*, which Varro derives from *legere*, "to choose;" and others from *legare*, *delegare*, "to send, delegate."

Court of the LEGATE, was a court obtained by Cardinal Wolsey of Pope Leo X. in the ninth year of Henry VIII. wherein he, as legate of the pope, had power:

Legatee || power to prove wills, and dispense with offences against the spiritual laws, &c. It was but of short continuance.
Legend.

LEGATEE, in *Scots Law*, the person to whom a legacy is provided.

LEGATIO LIBERA, was a privilege frequently obtained of the state, by senators of Rome, for going into any province or country, upon their own private business, in the quality of *legati* or envoys from the senate, that the dignity of this nominal office might secure them a good reception, and have an influence on the management of their concerns. The cities and towns through which they passed were obliged to defray their expences.—This was called *libera legatio*, because they might lay aside the office as soon as they pleased, and were not encumbered with any actual trust.

LEGATUS, a military officer amongst the Romans, who commanded as deputy of the commander in chief. The *legati*, at their first institution, were not so much to command as to advise. They were generally chosen by the consuls, with the approbation of the senate. As to the number of the *legati*, we have no certain information, though we may upon good grounds assign one to every legion. In the absence of the consul or proconsul, they had the honour to use the *fasces*.

Under the emperors there were two sorts of *legati*, *consulares* and *prætorii*. The first commanded whole armies, as the emperors lieutenant-generals; and the other had the command of particular legions.

The *legati* under the proconsuls in the provinces, served for judging inferior causes, and management of smaller concerns, remitting things of great moment to the governor or president himself. This was the original office of the *legati*, as was hinted above; though, as we have seen, they were afterwards admitted to command in the army.

LEGEND, any idle or ridiculous story told by the Romanists concerning their saints, and other persons, in order to support the credit of their religion.

The legend was originally a book used in the old Romish churches, containing the lessons to be read at divine service; hence the lives of the saints and martyrs came to be called *legends*, because chapters were read out of them at matins, and at the refectories of

religious houses. Among these the golden legend, which is a collection of the lives of the saints, was received in the church with great applause, which it maintained for 200 years; though it is so full of ridiculous and romantic stories, that the Romanists themselves are now ashamed of it.

LEGEND is also used by authors to signify the words or letters engraven about the margin, &c. of coins. Thus the legend of a French crown is, *SIT NOMEN DOMINI BENEDICTVM*; that of a moidore, *IN HOC SIGNO VINCES*: on those of the last emperors of Constantinople, we find *IESVS CHRISTVS BASILEVS BASILEON*, *IHS XPS NIKA*, *IESVS CHRISTVS VINCIT*.

LEGEND is also applied to the inscription of medals, which serves to explain the figures or devices represented on them. In strictness, the legend differs from the inscription; this last properly signifying words placed on the reverse of a medal, in lieu of figures.

It seems as if the ancients had intended their medals should serve both as images and as emblems; the former for the common people, and the other for persons of taste and parts; the images to represent the faces of princes; emblems their virtues and great actions; so that the legend is to be looked on as the soul of the medal, and the figures as the body.

Every medal has properly two legends; that on the front, and that on the reverse. The first generally serves only to distinguish the person by his name, titles, offices, &c. the latter is intended to express his noble and virtuous sentiments, his good deeds, and the advantages the public has reaped by him. This, however, does not hold universally; for sometimes we find the titles shared between both sides, and sometimes also the legend.

In the medals of cities and provinces, as the head is usually the genius of the place, or at least some deity adored there, the legend is the name of the city, province, or deity, or of both together; and the reverse is some symbol of the city, &c. frequently without a legend, sometimes with that of one of its magistrates.

Legends generally commemorate the virtues of princes, their honour and consecrations, signal events, public monuments, deities, vows, privileges, &c. which are either in Latin or Greek, or a mixture of both, and are intended to eternize their names, and the benefits done by them to the empire.

L E G E R D E M A I N, OR SLEIGHT OF HAND,

A DENOMINATION given to certain deceptive performances, which either depend altogether on dexterity and address, or derive but a small degree of aid from philosophical principles. Of these we shall present our readers with a selection of the best that have been either explained in books or publicly exhibited.

SECT. I. Performances with Cups and Balls.

Preliminary explanations. THE following method of exercising this simple and ingenious amusement is that practised by one Mr

Kopp a German, whose performances are deservedly preferred to those of former artists. In this, however, as in all the other branches belonging to the art of legerdemain, it is not sufficient that a person has the requisite dexterity or sleight of hand; it is necessary also to take off the attention of the spectators by some entertaining discourse; which not only prevents discovery, but adds greatly to the amusement of the company; for which reason, such discourse is inserted in this article.

To play his part properly, the performer on cups and

Perform-
nces with
Cups and
Balls.

Perform-
ances with
Cups and
Balls.

and balls ought to provide himself with a bag about 12 inches long, and from eight to ten in depth. The inside must be furnished with a number of pockets for holding the several articles necessary in the amusement; and this bag the performer must hang before him.

The materials necessary for the performer are,

1. Three white polished tin cups, represented by A, B, and C (fig. 1.) in the shape of a truncated cone with a double ledge D towards the base. This ledge, which is about half an inch in breadth, serves to raise the cups easily by, admitting also the hand to pass a small cork ball (see fig. 5.) The upper part E of the cup ought to be hollowed in the form of a sphere, sufficient to contain the balls without their appearing above the upper edge of the cups.

2. It is also necessary to have a small rod, called *Jacob's staff*; which is usually made of ebony, and neatly tipped with ivory at both ends. This is frequently used for striking on the cups; and being held in the hand where the balls are also kept, it gives the operator an opportunity of keeping that hand generally shut, or of varying its position, in order to avoid being discovered. The balls are made of cork, blackened by slight burning on the outside.

The dexterity in performing this operation consists in artfully secreting a ball in the right hand, and making it to appear or disappear in the same hand. The secreting it between the fingers is called *conjuring the ball*, at which time the spectators are to suppose that it is kept in the other hand, or that it was passed under a cup; but if it is made to reappear when held secretly in the hand, they must believe that it came out of the place last touched by the fingers.

Conjuring the ball is performed by putting it between the place of the thumb A and the finger B (fig. 2.), conveying it with the thumb, by rolling it upon the fingers the length of the line BC, moving the middle finger D to a distance, and placing the ball at the junction of the fingers C (fig. 3.); but in this part of the operation it is necessary to hold the ball rather tight, lest it should fall down and discover the secret. In order to make it appear, we must bring back the ball the same way from C to D; and every time that it is conjured, or made to disappear, as well as when it is made to reappear, the palm of the hand should be turned from the side of the table on which the operator is playing.

While this part of the trick is performing, the operator must let the spectators know that the ball has been passed under a cup, or into another hand; and in the first case he makes a motion with the hand; (as represented fig. 4.) indicating that he had thrown it through the cup; at which time also he conjures it, approaching the two fingers of the right hand towards the left, which last he holds open, and makes a motion as if the ball had been placed there, shutting the left hand instantly. It is also to be supposed, at every time when a ball seems to be placed below a cup, that it has been held in the left hand; and when he raises the cup with the right hand as in fig. 5. the left hand must be opened, and he rests the ball at that instant upon the hollow of the other, sliding it along the fingers.

At the time the ball is to be put secretly under

the cup, it should lie between the two fingers of the right hand (fig. 5.) With this hand he raises the cup; and placing it on the table, lets go the ball, which, according to its position in fig. 6. should be found near the edge of the cup when taken into the hand. If he would put the ball secretly between the two cups, it must be let go by jerking it towards the bottom of the cup which he holds, and places it very quickly on that in which the ball is to be found. When the ball is in this situation, if the operator should want it to disappear, he must raise the two cups with his right hand, and draw out hastily that under which the ball is placed; at the same instant lowering with his left hand the other cup, under which he places it.

In speaking of the tricks which follow, terms are made use of which explain whether what is said be feigned or true; of which terms explanations are given, and numbers adapted to the explanations of the different operations which follow.

I. *To put the ball under the cup*: Really done, with the fingers of the right or left hand.

II. *To put the ball under the cup, or in the hand*.—A feigned conjuration; pretending to shut it up in the left hand, which is afterwards opened, in order to have it supposed that the ball is under the cup or elsewhere. See fig. 3.

III. *To pass the ball under the cup*.—The ball supposed to be conjured is to be really introduced.

IV. *To pass the ball between the cups*, is likewise real.

V. *To make the ball which is between the cups disappear*.—This is likewise real; and performed, as has already been described, by drawing back with much precipitation and dexterity the cup on which it is placed, and lowering upon the table that which is above, and under which the ball must of consequence be found.

VI. *To take the ball*. Real.—It is taken between two fingers of the right hand, and shown before conjuration.

VII. *To take away the ball from under the cup*. This is done by taking it away in the sight of the spectators.

VIII. *To draw the ball*. Feigned; or by pretending to draw it from the end of the rod, from the cup, or any other place, by bringing into the fingers the ball which was secreted.

IX. *To throw the ball through the cup*, is to conjure it in pretending to throw it.

X. *To raise up the cups*. This is really done in three ways; viz. either with the right hand, the rod, or the left hand. The first is when the ball is to be secretly inserted in returning the cup to its place. In the second; the rod is to be put on the tops of the cups to turn them over again, so that the balls may be shown which were to be passed into them. The third is when the operator intends to show that no balls are in the cups, or that there are some.

XI. *To cover a cup*. This is really done, by taking with the right hand that which is to be put over another, and introducing at the same time a ball between the two.

XII. *To recover a cup*. It is done by taking with the left hand the cup to be put over or above, without introducing any thing into it.

Plat
CCXC.

Performances with Cups and Balls.

The PERFORMANCES.

1. *To put a ball under each cup, and take it out again.* Having placed on the table the three cups and little rod, as shown in fig. 1. the performer must begin his manoeuvres, by endeavouring to amuse the spectators with some kind of entertaining discourse. Nothing can be more *apropos* than the origin of the little rod and cups; and he must be very assiduous in this sort of discourse, to take off the eyes of the spectators as much as possible. The following may be a specimen of the manner in which he ought to address his audience: "There are many persons who meddle with the play of the cups and balls, and yet know nothing about them. This is by no means extraordinary: even I who now play before you, pretend to know but little. Nay, some time ago, I was such a novice as to think of playing before a numerous assembly with glass cups, in which you may guess I did not meet with great applause. I do not indeed practise this method but before such as are actually blind; neither do I play with China cups, lest, through awkwardness in feigning to break their handles, I should do so in reality. These are the cups which answer my purposes. They are made of such metal as the alchemists attributed to Jupiter and Mars, or, to speak more properly and intelligibly, they are made of tin. Behold and examine these cups (*showing the cups to the company, and putting them on the table:*) All my science, and it is in that in which it is admirable, consists in deceiving the eyes, and passing the balls into the cups without your perceiving how it is done. I advise you therefore to pay no attention to my words, but to examine well my hands, (*showing his hands*). If there is in this company any person who has the misfortune to use spectacles, he may retire; but the most clear sighted will see nothing there.

"Here is the little Jacob's rod (*showing the rod with the left hand*); that is to say, the magazine from which I take all my balls (*taking secretly with the other hand a ball from his bag, which he hides between his fingers*). There is not one in England so well furnished. Observe, that the more I take from it the more remain: I draw from it (VIII.) this ball (*showing it, and placing it upon the table, (I.)*). Observe that there is nothing under the cups (*showing the inside of the cups*), and that I have no other ball in my hands, (*showing his hands*). I take (VI.) this ball: I put it (II.) under the first cup. I draw (VIII.) a second ball from my little rod, and I put it under this second cup (*actually done*). It is proper here to tell you, that the generality of those who play the cups only feign to put the balls there; but I do not deceive you, and I actually put them there. (*He raises the cup B, and taking the ball which he has put under it into his right hand fingers, shows it to the company*). I return it (II.) under the same cup. I take (VIII.) this third, and put it (II.) in the same way under this last cup. You are about to say that this is not very extraordinary, and that you could do it as well yourselves. I agree with you; but the difficulty consists in taking out these balls again through the cups, (*striking the first cup with the rod*). I take (VIII.) this first ball (*showing it*). I put it (II.) into my hand, and send it to Constantinople, (*he opens the left hand*). I take

(VIII.) this (*striking with the rod on the second cup*). I put it (II.) into my hand, and I send it to the East Indies, (*opening his left hand*). I take (VIII.) the last and I put it (I.) on the table: Observe that there are no more under any of these cups (*turning down the cups with the rod*).

2. *With the single ball remaining on the table to pass a ball through each of the cups, and to take it off from the same.* "I return the cups to their places, and take (VI.) this ball, and I put it under this first cup. I take it back again (VIII.): observe that it is not there now, (*raising (X.) the cup with the left hand*). I put it (II.) under this other cup: I take it out again (VIII.) in the same manner, (*raising (X) the cup*). I put it (II.) under the last cup, and take it out again (VIII.) (*raising the last cup with the left hand, and placing the ball on the table*).

3. *With the single ball remaining on the table, to take away a ball through two or three cups.*—In this performance the three cups are distinguished by A, B, C, as in fig. 1.

"I never have any ball secreted in my hands, as the greatest part of them, who play the cups and balls have (*showing his hands*). I take (VI.) this ball, and I put it (II.) under this cup B. I cover it (XII.) with this cup C, and I take again (VIII.) this ball through the two cups (*shows the ball placing it on the table, returns afterwards the cup C to its place, and raises (X.) the cup B to show that there is nothing there*). I take again (VI.) this same ball. I put it (II.) under the same cup B: I cover it (XII.) with the two other cups C and A; and I take out (VIII.) this ball through the three cups (*showing it and placing it on the table*).

4. *With the single ball remaining on the table, to pass the same ball from cup to cup.*—"I now beg of you to pay every possible attention, and you will very distinctly see this ball pass from one cup into the other (*putting the cups at a greater distance from each other*). I take (VI.) this ball, and I put it (II.) under the cup C: there is nothing under this cup B (*raising it, introducing the ball and taking the rod in his hand*). I command that which I have put under the cup to pass under that B. You see it (*moving the end of the rod from one cup to the other, as if he followed the ball*): observe that it is passed (*raising the cup with his left hand, and taking the ball with his right, shows it to the company*). I return it (II.) under this cup B; there is nothing under this A (*raising the cup with his right hand, and introducing the ball there*). I am going to pass it under this last cup A. Look well; come near: (*making as if seeing it he would show with the end of the rod the path that it took*). You did not see it pass? I am not much surpris'd: I did not see it myself; however, here it is under the cup (*raising the cup A, and placing it on the table*).

5. *With the same ball remaining on the table. The cups being covered, to pass a ball from one into the other, without raising them up.*—I was very right in telling you, that the most clear sighted would not see very much; but for your comfort, here is a trick in which you will see nothing at all. I take this ball, and put it (II.) under this cup B. I cover it (XI.) with the two other cups (*taking one in each hand, and introducing the ball upon the cup B*): pay attention, that there

Performances with Cups and Balls.

is absolutely nothing in my hands (*showing them*). I command this ball to mount up upon the first cup (*taking up the two cups, and putting them in their places, he shows that it has mounted*). I return (II.) this ball under the same cup B. I cover it as before (*covers it in taking a cup in each hand, and introducing a ball between the second and third cup*). I take (*the only ball with which he plays being under the third cup, he cannot show it, but acts as if he had taken it out, and puts it into the fingers of his left hand, which he holds in the air, in conducting the hand from one side to the other.*) I take the ball, which is under these three cups; and I throw it through the first cup (*feigning to throw it*): observe that I have not conjured the ball, having nothing in my hands (*showing them*); it is passed, however, (*raising the first cup with the left hand, putting the ball upon the table and the cups in their places*).

6. *With the single ball remaining on the table, to pass a ball through the table and two cups.*—"You are undoubtedly surprised, that, having but a single ball, I have been able, after having shown it to you, to pass it under this cup without raising it; but let not that astonish you: I have secrets much more wonderful. I convey, for example, the steeple of one village into another: I have sympathetic quadrants, with which a conversation may be held at 200 leagues distance: I have a flying chariot which can conduct me to Rome in three days. I will show all these curiosities as soon as my machines are entirely completed; that is to say, in a few centuries: but to amuse you till the arrival of all these prodigies, I now continue the entertainment of the cups and balls. I put (II.) this ball under the cup A. I take it away again (VIII.) (*showing it, and feigning to put it into his left hand fingers*). I cover (XI.) this cup with the two others B and C (*introducing the ball between these two cups, using always the right hand, and feigning still to hold it in his left*), and I pass this same ball through the table and the two cups (*putting the left hand under the table*). There it is passed (*raising the first cup*).

7. *With the same ball. A ball having been put under a cup, to take it away again, and to pass it between two others.*—"Here is again a very pretty trick: I take this ball, and I put it (II.) under this cup A. Observe, that there is nothing under the others (*showing them and introducing the ball under the cup C*), nor in my hands: I take this ball, which is under the cup A (*feigning to take it out, and raising the bottom of the cup so that the spectators may not attend to his fingers*). I cover this cup C with the two others A and B, and I throw it (IX.) through these two cups (*raising them, and showing that the ball is passed there*).

8. *With this single ball and a shilling; to pass a ball from one hand into the other.*—"I take this ball; I put it (II.) into this hand, and I put into the other the shilling. In which hand do you think the ball is? or in which do you think the shilling may be?" (*Whatever answer the spectator makes, the performer shows him that he is mistaken, and that the whole is in the right hand; and this truth serves as a pretence to take a ball from the bag in putting the shilling back into it.*)

The performer may, however, without breaking the connexion of these operations, dispense with this trick,

and feign to drop the ball he plays with, which affords him a pretence for taking another.

9. *With the ball remaining on the table, and that which is secretly taken out of the bag; to pass under a cup the two balls put under the others.*—The operator goes on with his discourse: "In order to give you still farther amusement, I take this ball and cut it in two (*taking it in his left hand, and holding the rod with his right; feigning to cut it, he puts afterwards the rod on the table, and brings back to his fingers ends the ball which he took out of the bag*). Nothing is so commodious as to be able in this manner to multiply the balls. When I am in want of money, I cut them again and again, until I may have had five or six bushels (*placing the two balls on the table*). Observe that there is nothing under this cup A. I put there (II.) this first ball: there is nothing more under the two other cups (*introducing the ball under the cup B*). I take this second ball, and I put it (II.) under the cup C: there is now a ball under these two cups A and C. I take away (VIII.) from this cup C this ball, and I throw it (IX.) through the middle cup B: observe that it is passed (*raising the cup B, and introducing there the second ball*). I command this, which is under the other cup A, to pass under the same cup B (*raising this cup, and showing that they are both there, and placing them on the table*).

10. *With the two balls which are upon the table. Two balls having been put under the same cup, to pass them under two others.*—"When I was at college, the tutor told me, it was necessary to know how to do my exercise in two ways. I have just now passed these two balls into the middle cup; I am now to make them go out; the one is not more difficult for me than the other. I take therefore these two balls, and place them under this cup B (*putting one ball under the cup, and conjuring the other*); observe that there is nothing under the cup A, nor under the other C (*introducing into this last the ball that he conjured*): I command one of these balls, which are under the middle cup, to pass under the one or the other of these two cups A and C. Behold it already gone (*raising the cup B to show that there is no more than a single ball; and taking, with the right hand, the ball which is underneath, he shows it, and puts it (II.) under the same cup B*). Let us see into which cup it has passed (*raising immediately the cup A, and introducing the ball that he took from the cup B*): here it is under this cup C (*raising the cup*); I command the other ball to pass under this cup A (*he raises it, and shows that it passed there*). This trick is frequently done with three balls, but it appears much more extraordinary with two.

11. *With these two balls, a third which he shows, and a fourth secreted in his hands; to pass three balls under the same cup.*—"All this is but a trifle; I am going to show you another trick with three balls (*taking out of the bag a third ball, and placing it on the table, secreted at the same time a fourth in his hand*). Observe that there is nothing under any of these cups (*raising them, and introducing them under the cup C*). I take this first ball, and throw it (IX.) through this cup C. Observe that it is passed (*raising (X.) the cup with the right hand*); I take this second ball, and throw it (XI.) through the same cup. There it is passed (*raising (X.) again the cup*); I take the third, and I make it pass the

Performances with
Cups and
Balls.

same (raising (X.) the cup, and showing that these are passed under all the three).

12. With the three balls remaining under the cup, and that held secretly in the hand; to pass two balls from one cup into another, at the choice of a person, without touching any of the cups.—“Here is another in which I have never been able to comprehend any thing; but it will astonish you much (raising the cup C, and taking away the three balls from their places, he puts them under each cup, and in raising the cup C introduces there the fourth ball which he held secretly in his hand). I take this ball (that which is under the cup B), and I put it (II.) under the same cup. I take this (the ball from the cup A), and I place it (I.) under the same cup (putting there also that which was secreted in his hand): I take this last, and I throw it (IX.) through the cup C; and to show that I do not deceive you, behold it passed (raising (X.) the cup that has been fixed upon, which suppose to be C, and showing that there are two). I take again these two balls, and put them under the cup C (putting really but one): observe that there is no more under this cup B (introducing there the ball that he had just taken away, and showing that he had no other in his hand); I command one of these balls, which are under this cup C, to go and join that which is under this A. Observe that it is passed. There! (raising the cup C, and returning the two balls under the same cup, and raising C, in order to show that there is but a single one; and he places it again under the same cup: he does not raise the cup B under which a ball remains).

13. With the three balls that were placed upon cups, and that which remains hidden under the middle cup; to pass under the same cup the balls put under the others.—“I take this ball (that which is upon the cup C), and I put it (II.) under the same cup C; and I order it to pass into this cup B: there it is passed (in raising this cup he introduces a third ball.) I take this third ball, and put it (II.) under this cup C; and I command it to pass into the cup B along the table, and in the sight of the spectators (taking the rod in his left hand, feigning to show the way that it passed between the two cups). You did not see it then? Here it is (He draws it (VIII.) from the end of the rod, which appears to show it). Go quickly (throwing it (IX.) through the cup B; and showing that they are all three there, and that there is nothing under the two others; placing afterwards three of the balls on the table, and secreting the fourth in his hand.)

15. With the three balls remaining upon the table, and that which is held secretly in his hand.—Multiplication of the balls.

For this trick there must be a tin vase (see fig. 8.), at the bottom of which there must be contrived a false bottom A, which will fall down at pleasure; that is to say, in reverting it upon the table, by means of a small trigger placed at the base of one of the handles B, introducing previously between the false and true bottoms a dozen of balls. The operator goes on with his discourse.

“If any of the company believe in witches, I would give my advice that they should believe in them no longer; as what I am about to do is much more surprising than the feats of any witch.—I put (I.) these three balls under the three cups you see on the table: I take away (VII.) this first ball (that which is

under the cup C), and I put it (II.) into this vase. I take this, and I also put it (II.) into the vase. I take away (VII.) this third (that which is under the cup A), and I throw it (II.) the same way.” (Every time that he raises one of the cups to take away the ball, he introduces that which always remains secreted in his right hand; and this he repeats, constantly taking out one ball and putting in another, till he has introduced all the twelve balls; after which he resumes his discourse.) “You imagine, perhaps, that I always make use of the same balls; but to prove the contrary, here they are, (inverting the vase so as to turn them all out.)

In this trick, if the vase be well made, the inside may be shown, and it may even be previously inverted; in which case, it will not be supposed that any balls have been put into it.

15. With the three balls remaining under each of the cups, and that which is hidden in his hand; to pass one ball under each of the three cups.

“I put all these balls into my pocket. I take (VI.) this (the one secreted in his hand), and I make it pass through the table under this first cup C, (conjuring it). I take another from my bag (showing the same ball). I make it pass in the same manner through this B, (conjures it again). I take a third (showing still the same), and I make it pass under this last cup A (conjuring it). Here are all the three passed (turning over the cups, and in taking them up again introduces the ball that he has in his hand under the cup B, and puts the three balls upon the three cups.

16. With the three balls put upon each cup, and that which was introduced under the middle cup; to draw two balls through the same cup.—“There will be wanted now only two balls.” Here the operator takes that which is under the cup C, and puts it (II.) into his bag. He takes in the fingers of his right hand the ball which is on the cup B, showing it; and with the other covers the cup B, with that passing (IV.) there the ball which he feigned to put into his bag. He then takes the ball which is under the cup A with the right hand; and, showing a ball in each hand, tells the company that he put them (II.) under the cup A; though he actually puts but one, which he holds in his left. He then draws one of these balls through the same cup A, showing it, and placing it upon the cup C. He then raises the cup A, and takes the ball which is under it with his right hand, adding, “There remains but one more.” While pronouncing these words, he puts it (II.) under the cup. “I take (adds he) the other ball,” raising the cup, and showing that it is there no longer; then, taking one of the two balls which seemed to remain alone, he put it (II.) into his bag, saying, “I return this into my bag.”

17. With a ball which is hidden under the middle cup, another hidden under that which covers it, that which remains in the hand, and a fourth which is upon the table; to pass the same ball successively through the three cups.—The preceding trick was only on purpose to prepare the spectators for this; as they now imagine that the performer played only with one ball. He may now address them in the following manner:

“I am now going to make a very pretty trick with this single ball. I forgot to show it to you at the beginning: I cover (XI.) these cups (putting the cup

Performances with cups and Balls.

Performances with Cups and Balls

A upon C and B). I take (VI.) this ball, and I throw it (IX.) through the first cup;" (*raising (X.) the cup A with the right hand*). He then shows that it is passed between C and A; and, putting it in its place, he introduces there that which he has in his hand. "I take (says he) (VI.) this same ball, and I throw it through the other cup C;" and while he says so, he raises (X.) the cup C, showing that it has passed, introducing there that which he has in his hand, and putting it in the place of the former. "I take again (continues he) (VI.) this same ball, and I throw it (IX.) through that last cup B," (*raising (IX.) the cup B*). During which time he takes away the ball from under it with his left hand, then places it on the table, and returns the cup to its place, introducing there the ball which he has in his left hand.

18. *With the three balls which are under the cups, that which is on the table, and two which he takes from the bag; to pass under a cup the balls put under the two others without raising these last.*—The performer may proceed in his discourse in the following manner:

"Let us now return to the order of the entertainment which I have interrupted, and continue to play with three balls." He now takes two balls from his bag, by which means he in fact plays with six balls, though he pretends to play only with three. These two balls, together with that which remains on the table, he puts on the top of each cup. "I take (says he) (VI.) this ball, (*that which is on the cup C*). I throw it (IX.) through that cup: there it is passed." He now raises (X.) the cup, shows it; and thus has an opportunity of introducing the ball which he has in his hand. "I take (VI.) this (*the ball which is under the cup B*), and throw it (IX.) through the cup B." At this he raises the cup with his left hand, showing that it has passed, and covering it again. "I take again (VIII.) this ball from the same cup, and throw it (IX.) through that C: observe that it is passed." Then, raising up (X.) the cup C, showing that there are then two there, he introduces other two which he had in his hand. "I take (says he) (IV.) this ball (*that which is under the cup A*), and I throw it (IX.) through the same cup A. There! it is passed," (*raising the cup C*); after which he shows the three balls, and introduces there that which was in his hand, putting the three balls upon the table.

19. *With the three balls which remain under the cups, and the three others which remain upon the table; to pass separately the three balls through each cup.* In this manœuvre the performer puts again the three balls which are upon the table upon the top of each cup. He takes that which is on the cup C, and throws it (IX.) through the same cup; and while he announces this to the company, he raises (X.) the cup: taking away (VIII.) the ball, showing that it has passed, introducing there that which was in his hand, and putting the same ball upon the same cup. He then takes that which is upon the cup B, and throws it (IX.) through the same cup; shows that it is passed, takes it away (VII.) and introduces the ball that was in his hand under this cup, putting it in like manner on the cup. Then he takes the ball which is on the cup A, and throws it (IX.) through the same cup A. As he announces its passage he raises the cup, taking away (VII.) and showing the ball; introdu-

cing in the same manner that which was in his hand; putting this first at the top of the cup A, and then shows that it is not in his hand, and that he has but three balls.

20. *With the three balls remaining upon the table, and those which are under each cup. Having put the balls into the bag, to make them return under the cups.*—"I take these three balls, and I return them into my bag, (*keeping one in his hand*). Behold to what all is reduced that I had to show you for your amusement. I did know some more very pretty tricks, but I have forgot them. (*Pretending to muse for a moment*): Ah! I still remember two or three very pleasing ones. Come, my little balls! Return under the cups, (*turning over the cups*.) See how nimble they are, and obedient at the same time;" (*covering them again with the cups*.)

21. *With the three balls which are under the cups, and that in his hand; to pass the balls through the two cups.*—Here the operator begins with taking away (VII.) the ball which is under the cup C; he covers it with the cup B; and passes (III.) the other ball which he has in his right hand between the two cups. He then takes (VI.) the ball which he had in his left hand, and throws it (IX.) between the two cups B and C. In announcing its passage he raises the cup (X), shows that it is passed, and introduces the ball in his hand. He then takes the ball under the cup B, and throws it (IX.) through the two cups C and B. Announcing to the company its passage, he raises (X.) the cup, and shows that there are two balls, introducing (III.) at the same time the third. He then takes the last ball, viz. that which is under the cup A, covers again with the left hand the two cups B and C, and throws (IX.) the third ball through these two cups. He then announces their passage, raises the two cups, and shows the three balls, covering again the cup C with the two others.

22. *With the three balls which are upon the cup C, and the one in his hand; to take out the three through two cups.*—"I take (says the performer) (VIII.) the first ball, and put it (II.) into my bag. I take (VIII.) in the same manner the second, and I put it also into my bag. I take (VIII.) the third, and I put it into my bag, (*putting in really that which he had in his hand*.) While he desires the spectators to observe that there are no more in the cups, he raises the cup A with the left hand, and, putting it in its place, raises with the right hand the cup C. In supporting it with the cup B, he puts it down quickly, and a little on the side of B, and at the same time places C on the table, under which will be found the three balls, which had not time to separate.

23. *With the three balls remaining under the middle cup, and three others taken out of the bag; to pass, in one action, three balls through a cup.*—This trick is begun by the performer taking three balls from his bag, and putting them on the top of the cup B, which he covers with the cup A. Ordering them to disappear and to pass under the cup C, he takes away very suddenly with the left hand the cup B, as is done in the preceding trick, leaving in the middle of the play the cup C, under which the balls are found. Taking them then away, and replacing them on the same cup, he makes them return again in the same manner under the cup

Performances with
Cups and
Balls.

cup C. At last he takes the three balls, and putting them in his bag, pretends to pass them through the table under the cup where the others were. He then returns two or three of these last balls into his bag, and takes two white balls, which he puts upon the table.

24. *With the black ball remaining on the table, two other white balls, and a black one which he holds secretly in his hand; to pass three balls from one cup into another.*

N. B. To make the balls white, they are rubbed with a little chalk instead of being blackened with the candle.

“ Let us now (says the operator) have a trick to prove that I do not conjure the balls. There is nothing under this cup C, (*introducing the black ball that was in his hand*). There is no great thing under this B. I place there these three balls, (*the three which are upon the table, of which he conjures the white one.*) There is nothing more under this third cup A, (*introducing there the white ball*). I order one of these two white balls which are under the cup B, to pass under this A.” With these words he raises the cup B; and taking the white ball in the fingers of his left hand, and the black one in those of the right, he shows them, saying, “ Observe that there is but one white one. I put again these two balls under the cup B.” While speaking thus he puts the white one under the cup, and conjures the other, while feigning to put it in with that of the left hand. He then announces its passage; and while he does so, raises the cup A, and introduces the black ball. Commanding then the black ball to pass under the cup A, he raises the cup B, takes in his right hand fingers the ball which is there, and shows it. “ I put it again (says he) (II.) under this cup (*conjuring it*); and I show you that it is passed under this A, (*introducing there the white ball*). I order at last the white ball, which is under this cup B, to pass into this A.” While telling the company that it is passed, he raises the cup A, and puts the three balls upon each cup, the black one upon the middle.

25. *With the three balls put at the top of the cups, and that which has been inserted under one of them in the preceding trick; to change the colour of the balls.* The operator goes on with his discourse: “ If there is any one here who knows how to play the cups and balls, he will do well to observe, that it is not possible to do this trick by the common method, and with three balls only. However I have no more, (*showing his hands*). I take this white ball (*that which is upon the cup C*), and I throw it (IX.) through this cup (*the same under which he left a black ball in the preceding trick*). I take this black ball (*with the left hand fingers*); there is nothing under this cup B, (*introducing there the white ball*). I throw it (IX.) through this cup B, (*taking again the ball in his right hand fingers*). I take this other white ball, (*with his left hand fingers*). There is nothing under this cup A, (*introducing the black ball*): I throw it (IX.) through the cup A, (*taking it again into his right hand fingers to conjure it*). Observe that they have all changed their colour.” (*covering each of them with their cups*).

26. *With the three balls which are left under the cups, two white balls, and a black one that he took trick by trick*

from his bag; to change the sizes of the balls.—In performing this trick the operator takes away the white ball which is under the cup C with his left hands fingers, and, raising the cup with his right, introduces there a white ball which he took out of his bag. The white ball which he introduces is kept in his hand with the fourth and little finger; and he raises the cup in the same manner as when he introduces the balls. In turning over the cup afterwards, he advances his hand to introduce this ball. These balls should be filled with horse hair or paper, so that they may be very light, and make no noise. The operator then tells his company, that he makes the ball pass through the table under the same cup; and while he speaks thus, he takes the ball again in his right hand, and while putting his hand under the table, he takes a black ball out of the bag. He then takes away the ball from the cup B, introducing the black one in its stead. He then tells the spectators, that he makes it repass through the table; and, while he tells them so, he takes a white ball; then, while taking away that which is under the cup A, he introduces that ball, making it repass in the same manner through the table, and at last shows them to the company, and covers them with their cups.

27. *With the three balls which are under the cups, two other black balls, and a white one that was taken trick by trick from his bag; to pass the balls from one cup into another.*—“ Observe well (says the operator), that there are two white balls under these two cups A and C, and a black one under this (*raising the cups*). I cover again these three balls (*covering each of them with a cup*). I make to pass out through the table the white ball which is under the cup C.” Here he takes a white ball from his bag; and in order not to fail, the black and white balls should be in separate pockets. Having taken out the ball, he puts the first into his bag, telling the company that there is now nothing under the cup C; and while he says so, he raises it, holding the ball with his little finger, proceeding in his discourse as follows: “ I take away this ball (*that which is under the cup A*), and I pass it through the table under the cup C (*taking a black ball from his bag*.”) While the passage of this ball is announced, he raises the cup C to take it away and show it; introducing there this black ball, “ I put again (says he) this other white ball into my bag, and I command the black one which is under the cup B to pass under this. It is no longer under this cup:” and while he says so, he raises the cup B, in supporting with his little finger the ball which remains there. Announcing its passage, he raises the cup C and shows the ball; taking it afterwards into the left hand, throws it into the air; returning it into his right hand, and feigning to throw it into the air a second time, he lets it fall into his bag; casting his eyes upwards and downwards as if he saw it fall upon the cup B: he raises this cup, and shows it to the spectators, as the former, passed through the cup.

SECT. II. Performances with the Cards.

PREVIOUS to the performances with cards, it will be necessary to explain the method of making the pass; that is, bringing a certain number of cards from the bottom

Performances with
The Cards

Performances with the Cards.
Of making the pass.

bottom of the pack to the top; as many of these performances depend on that manœuvre.

1. Hold the pack of cards in your right hand, so that the palm of your hand may be under the cards: place the thumb of that hand on one side of the pack, the first, second, and third fingers on the other side, and your little finger between those cards that are to be brought to the top and the rest of the pack. Then place your left hand over the cards, in such a manner that the thumb may be at C (fig. 20, 21.), the fore finger at A, and the other fingers at B.

The hands and the two parts of the cards being thus disposed, you draw off the lower cards confined by the little finger and the other parts of the right hand, and place them, with an imperceptible motion, on the top of the pack.

It is quite necessary, before you attempt any of the experiments that depend on making the pass, that you can perform it so dexterously that the eye cannot distinguish the motion of your hand; otherwise, instead of deceiving others, you will expose yourself. It is also proper that the cards make no noise, as that will occasion suspicion. This dexterity is not to be attained without some practice.

There is a method of preparing a pack of cards by inserting one or more that are a small matter longer or wider than the rest; which preparation will be necessary in several of the following experiments.

2. Have a pack in which there is a long card; open the pack at that part where the long card is, and present the pack to a person in such a manner that he will naturally draw that card. He is then to put it into any part of the pack, and shuffle the cards. You take the pack, and offer the same card in like manner to a second or third person; observing, however, that they do not stand near enough to see the card each other draws. You then draw several cards yourself, among which is the long card, and ask each of the parties if his card be among these cards, and he will naturally say Yes, as they have all drawn the same card. You then shuffle all the cards together, and cutting them at the long card, you hold it before the first person, so that the others may not see it, and tell him that is his card. You then put it again into the pack, and shuffling them a second time, you cut again at the same card, and hold it in like manner to the second person, and so of the rest (A).

If the first person should not draw the long card, each of the parties must draw different cards; when cutting the pack at a long card, you put those they have drawn over it; and seeming to shuffle the cards indiscriminately, you cut them again at the long card and show one of them his card. You then shuffle and cut again, in the same manner, and show another person his card, and so on: remembering, that the card drawn by the last person is the first next the long card, and so of the others.

This experiment may be performed without the long

card, in the following manner. Let a person draw any card whatever, and replace it in the pack: you then make the pass, and bring the card to the top of the pack, and shuffle them without losing sight of that card. You then offer that card to a second person, that he may draw it, and put it in the middle of the pack. You make the pass and shuffle the cards a second time in the same manner, and offer the card to a third person, and so again to a fourth or fifth, as is more fully explained further on.

3. You let a person draw any four cards from the pack, and tell him to think on one of them. When he returns you the four cards, you dexterously place two of them under the pack and two on the top. Under those at the bottom you place four cards of any sort; and then, taking eight or ten from the bottom cards you spread them on the table, and ask the person if the card he fixed on be among them. If he say No, you are sure it is one of the two cards on the top. You then pass those two cards to the bottom, and drawing off the lowest of them, you ask him if that is not his card. If he again say No, you take that card up, and bid him draw his from the bottom of the pack.

If the person say his card is among those he first drew from the bottom, you must dexterously take up the four cards that you put under them, and, placing those on the top, let the other two be at the bottom cards of the pack, which you are to draw in the manner before described.

4. After a card has been drawn, you place it under the long card, and by shuffling them dexterously you bring it to the top of the pack. Then lay or throw the pack on the ground, observing where the top card lies. A handkerchief is then bound over your eyes, in such a manner however that you can see the ground, which may be easily done. A sword is then put into your hand, with which you touch several of the cards, seemingly in great doubt but never losing sight of the top card, in which at last you fix the point of the sword, and present it to him who drew it. Two or three cards may be discovered in the same manner, that is, by placing them under the long card, and then bringing them to the top of the pack.

5. You must have in the pack two cards of the same sort, suppose the king of spades. One of these is to be placed next the bottom card, which may be the seven of hearts, or any other card. The other is to be placed at top. You then shuffle the cards without displacing those three cards, and show a person that the bottom card is the seven of hearts. Then drawing that card privately aside with your finger, which you have wetted for that purpose, you take the king of spades from the bottom, which the person supposes to be the seven of hearts, and lay it on the table, telling him to cover it with his hand. You then shuffle the cards again, without displacing the first and last card, and passing the other king of spades at the top to the bottom, you show it to another person. You then draw that

Performances with the Cards.

The four considered cards.

Divination by the sword.

The transfutable cards.

(A) There is frequently exhibited another experiment, similar to this, which is by making a person draw the long card; then giving him the pack, you tell him to place his card where he pleases and shuffle them, and you will then name his card or cut the pack where it is. You may also tell him to put the pack in his pocket, and you will draw the card; which you may easily do by the touch.

Performances with the Cards.

that privately away; and taking the bottom card, which will then be the seven of hearts, you lay that on the table, and tell the second person, who believes it to be the king of spades, to cover it with his hand.

You then command the seven of hearts, which is supposed to be under the hand of the first person, to change into the king of spades; and the king of spades, which is supposed to be under the hand of the second person, to change into the seven of hearts; and when the two parties take their hands off, and turn up the cards, they will see to their no small astonishment, after having so carefully observed the bottom cards, that your commands are punctually obeyed.

The incomprehensible transposition.

6. Take a card, the same as your long card, and rolling it up very close, put it in an egg, by making a hole as small as possible, and which you are to fill up carefully with white wax. You then offer the long card to be drawn; and when it is replaced in the pack, you shuffle the cards several times, giving the egg to the person who drew the card, and, while he is breaking it, you privately withdraw the long card, that it may appear, upon examining the cards, to have gone from the pack into the egg. The experiment may be rendered more surprising by having several eggs, in each of which is placed a card of the same sort, and then giving the person the liberty to choose which egg he thinks fit.

This deception may be still further diversified, by having, as most public performers have, a confederate, who is previously to know the egg in which the card is placed; for you may then break the other eggs, and show that the only one that contains a card is that in which you directed it to be.

To name several cards that two persons have drawn.

7. Divide a piquet pack of cards into two parts by a long card. Let the first part contain a quint to a king in clubs and spades, the four eights, the ten of diamonds, and ten of hearts; and let the other part contain the two quart majors in hearts and diamonds, the four sevens, and the four nines (B).

Then shuffle the cards, but observe not to displace any of those cards of the last part which are under the long card. You then cut at that card, and leave the pack in two parts. Next, present the first of those parts to a person, and tell him to draw two or three cards, and place the remainder on the table. You present the second parcel in like manner to another. Then having dexterously placed the cards drawn by the first person in the second parcel, and those drawn by the second person in the first parcel, you shuffle the cards, observing to displace none but the upper cards. Then spreading the cards on the table, you name those that each person drew; which you will very easily do, by observing the cards that are changed in each parcel.

The two convertible aces.

8. On the ace of spades fix, with soap, a heart, and on the ace of hearts, a spade, in such a manner that they will easily slip off.

Show these two aces to the company; then taking the ace of spades, you desire a person to put his foot upon it, and as you place it on the ground, draw away the spade. In like manner you place the seem-

ing ace of hearts under the foot of another person. You then command the two cards to change their places; and that they obey your command, the two persons, on taking up their cards, will have ocular demonstration. A deception similar to this is sometimes practised with one card, suppose the ace of spades, over which a heart is placed slightly. After showing a person the card, you let him hold one end of it, and you hold the other, and while you amuse him with discourse, you slide off the heart. Then laying the card on the table, you bid him cover it with his hand. You then knock under the table and command the heart to turn into the ace of spades. By deceptions like these, people of little experience and much conceit are frequently deprived of their money, and rendered ridiculous.

Performances with the Cards.

9. You must be prepared with two cards, like those represented by fig. 22. and with a common ace and a five of diamonds. The fifteen thousand livres.

The five of diamonds and the two prepared cards are to be disposed as in fig. 23. and holding them in your hand, you say, "A certain Frenchman left 15,000 livres, which are represented by these three cards, to his three sons. The two youngest agreed to leave their 5000, each of them, in the hands of the elder, that he might improve it." While you are telling this story, you lay the 5 on the table, and put the ace in its place, and at the same time artfully change the position of the other two cards, that the three cards may appear as in fig. 24. You then resume your discourse, "The eldest brother, instead of improving the money, lost it all by gaming, except 3000 livres, as you here see." You then lay the ace on the table, and, taking up the 5, continue your story: "The eldest, sorry for having lost the money, went to the East Indies with these 3000, and brought back 15,000." You then show the cards in the same position as at first, in fig. 22.

To render this deception agreeable, it must be performed with dexterity, and should not be repeated, but the cards immediately put in the pocket; and you should have five common cards in your pocket, ready to show, if any one should desire to see them.

10. Take a parcel of cards, suppose 40, among which insert two long cards: let the first be, for example, the 15th, and the other the 26th, from the top. Seem to shuffle the cards, and then cutting them at the first long card, poise those you have cut off in your hand, and say, "there should be here 15 cards." Cut them again at the second long card, and say, "There are here only 11 cards." Then poising the remainder, you say, "here are 14 cards." To tell the number of cards by the weight.

11. Several different cards being shown to different persons, that each of them may fix on one of those cards; to name that on which each person has fixed.—There must be as many different cards shown to each person as there are persons to choose: therefore, suppose there are three persons, then to each of them you must show three cards; and telling the first person to retain one in his memory, you lay those three cards down, and show three others to the second person, and so to the third. To name several cards on which different persons have fixed.

Performances with the Cards.

third. You then take up the first person's cards, and lay them down one by one, separately, with their faces upward. You next place the second person's card over the first, and in like manner the third person's card over the second's; so that in each parcel there will be one card belonging to each person. You then ask each of them in which parcel his card is; and when you know that, you immediately know which card it is; for the first person's card will always be the first, the second person's the second, and the third person's the third, in that parcel where they each say his card is.

This experiment may be performed with a single person, by letting him fix on three, four, or more cards. In this case you must show him as many parcels as he is to choose cards, and every parcel must consist of that number, out of which he must fix on one; and you then proceed as before, he telling you the parcel that contains each of the cards.

The magic ring.

12. Make a ring large enough to go on the second or third finger (fig. 15.) in which let there be set a large transparent stone, to the bottom of which must be fixed a small piece of black silk, that may be either drawn aside or expanded by turning the stone round. Under the silk is to be the figure of a small card.

Then make a person draw the same sort of card as that at the bottom of the ring, and tell him to burn it in the candle. Having first shown him the ring, you take part of the burnt card, and reducing it to powder, you rub the stone with it, and at the same time turn it artfully about, so that the small card at bottom may come in view.

The magic tea caddy.

Plate CCXC.

13. *To change one card into another.*—Provide a mahogany tea caddy about four or five inches deep, and long enough to admit a common-sized playing card: (see fig. 9.) This caddy must be furnished with a moving false bottom B, moveable upon hinges on the inside edge of the front A. This bottom may be made of brass, tin, or lead; and the false bottom must be so exactly fitted, that it cannot, from a slight view, be distinguished from the other. The inside of both caddy and false bottom ought to be lined with black or other dark-coloured cloth or velvet, so that it may not make any noise in falling down. It would be proper that the false bottom should rise with a spring towards the front, and it must be kept tight with a brass spring catch (*a*, fig. 10.) screwed to the left side of the box near the top, and which is hid by the cloth covering. The end of this spring projects a little into the front. It is driven back, to let go the false bottom, by means of a small bent wire *bb* let into the front of the caddy; and this pin is moved by the bolt *c*, which, when the box is locked, shoots out against it, by reason of the spring being driven in; by which means the bottom springs down, and covers the card placed in the box.

Before you attempt to show any trick with this caddy, a card must be placed, in the inside between the front A and the false bottom B, springing up the bottom afterwards against the front; after which it is ready for use, and shown openly to the company without any danger of a discovery.

Two persons may now be desired to draw two different cards from a pack, one of which must be the

same with the one concealed in the caddy. Taking this card from the person who drew it, you put it in the pack, pretend to shuffle it, but keep the card either uppermost or undermost, so that you can easily find it afterwards. Desiring then the other person to come forward and put his card very attentively into the caddy, you in the mean time secretly convey away from the pack the card drawn by the other; then, giving him the key, you desire the caddy to be locked up. After some pretended conjurations, desire him to unlock it again and take out the card; which he will find not to be his, but that drawn by his neighbour: his card being apparently vanished from the caddy, as the other is from the pack.

Performances with the Cards.

14. Provide two pieces of pasteboard A and B (fig. 11.) of equal dimensions, $3\frac{1}{2}$ inches long and three broad. Place these beside one another, as shown in the figure. Take then a very smooth silk ribbon, and put a band of it from C to E towards the edge of the pasteboard A, and another from D to F in such a manner as to come beyond the pasteboard, and to admit of being folded over at the two ends. This must be glued on the back of the board A at the places C and D, and at the back of the board B at the places E and F. Place two other bands in a similar manner on the pasteboard B, turning them over on the back of the same board at the places I and L, and at the back of A at the places G and H. These two bands should fall in the inside of the pasteboard, according to the breadth of the ribbons. The two pasteboards being now placed the one upon the other, will form a kind of port-folio, one of the sides of which will always be hinged when the other is opened. Four small bands of the same ribbon are to be put at the four extremities of the sides MNQR of the two pieces of pasteboard; observing that they pass below the bands already placed. Glue their ends in the same manner as their ends at the back of the boards, ornamenting also the two sides O and P of the pasteboard B with pieces of the same ribbon; but these six last bands are of no use in the performance.

Two pieces of paper folded like the cover of a letter must now be provided, large enough to cover the two ribbons GI and HL, as well as the space contained within them. Glue one of these upon the two ribbons, and apply the other below this; so that the uppermost of these two wrappers may fall exactly over the other, enclosing and hiding the two ribbons entirely. A second port-folio similarly constructed is now to be provided, and both of them covered with coloured paper from the sides where the ribbons are glued and folded.—The deceptions with these port-folios are as follows:

1. *Two cards, chosen at random, having been shut up in two separate places; to make them pass reciprocally from the one into the other.*—The port-folios being constructed in the manner above described; if you open one of them either on the one side or on the other, one of the paper wrappers will always be visible; and thus it will naturally be supposed that there is no more but one. Having then secretly enclosed a card in each of the wrappers of the port-folios, procure a pack of cards that has but two sorts, and cause two persons fairly draw two cards similar to the first. Present then a port-folio, open, to the first person who drew a card

Performances with the Cards.

Similar to that which was placed in the second, desiring him to place it in the wrapper which he finds vacant. Take back then the port-folio; and, in placing it on the table, artfully turn it over: having placed likewise in the vacant wrapper of the second port-folio the card drawn by the second person; and putting it in the same way upon the table, command the cards reciprocally to pass from the one port-folio into the other; and open them so that each of the persons may take out the card which the other inserted.

2. *A card being shut up in the port-folio; to make it return into the pack.*—To perform this, procure a pack which has two cards of the same kind. One of these is to be openly drawn, and the person who has done so must be told to shut it up under the wrapper of one of the port-folios; and inform him that you will make it return into the pack. Give him the port-folio to blow upon; and on opening it, present him with the empty wrapper, to show him that his card is not there; after which, presenting him with the pack, he will find there the other card, which he will naturally imagine to be the one he put into the wrapper.

3. *To make an answer appear to a question secretly written.* Transcribe on different cards a certain number of questions, and on others the same questions with their answers; taking care to have the handwriting as much alike as possible, so that no difference can easily be perceived. The same caution must be observed with regard to the cards themselves; which, for that reason, ought to be plain ones. Having written with a pencil at the bottom of the first questions their corresponding answers, shut up one of them secretly in the port-folio; and presenting them to any person, let him draw as by chance that which is similar to the one thus shut up. Make him then place in the other wrapper the question which he had drawn; and telling him that you are about to write an answer even through the port-folio, take a glass, and pretend to read in it the answer to the question. Open it afterwards, so that he may take out the other card himself, and he will imagine it to be the one he selected.

In performing this trick, it will be proper to have a port-folio of the same kind with the two described, which opens only at one side, and which consequently has but one wrapper. This must be shown to such as seem to be too inquisitive, and will be of use to prevent them from entertaining any idea that the folio opens upon both sides. The former must therefore be immediately put into the pocket, in order to give an opportunity of drawing out the other in case the port-folio should be asked for.

The card in the mirror. Plate CCXCI.

15. Provide a mirror, either round, as A (fig. 18.), or oval, the frame of which must be at least as wide as a card. The glass in the middle must be made to move in the two grooves CD and EF, and so much of the quicksilver must be scraped off as is equal to the size of a common card. You will observe that

the glass must likewise be wider than the distance between the frame by at least the width of a card.

Then paste over the part where the quicksilver is rubbed off a piece of pasteboard, on which is a card that must exactly fit the space, which must at first be placed behind the frame.

This mirror must be placed against a partition, through which is to go two strings, by which an assistant in the adjoining room can easily move the glass in the grooves, and consequently make the card appear or disappear at pleasure (c).

Matters being thus prepared, you contrive to make a person draw the same sort of card with that fixed to the mirror, and place it in the middle of the pack: you then make the pass, and bring it to the bottom; you then direct the person to look for his card in the mirror, when the confederate behind the partition is to draw it slowly forward, and it will appear as if placed between the glass and the quicksilver. While the glass is drawing forward, you slide off the card from the bottom of the pack, and convey it away.

The card fixed to the mirror may easily be changed each time the experiment is performed. This experiment may also be made with a print that has a glass before it and a frame of sufficient width, by making a slit in the frame through which the card is to pass; but the effect will not be so striking as in the mirror.

16. Place a vase of wood or pasteboard AB (fig. 19.) on a bracket L, fixed to the partition M. Let the inside of this vase be divided into five parts, *c, d, e, f, g*; and let the divisions *c* and *d* be wide enough to admit a pack of cards, and those of *e, f, g*, one card only.

Fix a thread of silk at the point H, the other end of which passing down the division *d*, and over the pulley I, runs along the bracket L, and goes out behind the partition M.

Take three cards from a piquet pack, and place one of them in each of the divisions *e, f, g*, making the silk thread or line go under each of them. In the division *e*, put the pack of cards from which you have taken the three cards that are in the other divisions.

Then take another pack of cards, at the top of which are to be three cards of the same sort with those in the three small divisions; and making the pass, bring them to the middle of the pack, and let them be drawn by three different persons. Then give them all the cards to shuffle; after which place the pack in the division *d*, and tell the parties they shall see the three cards they drew come, at their command, separately out of the vase.

An assistant behind the partition then drawing the line with a gentle and equal motion, the three cards will gradually rise out of the vase. Then take the cards out of the division *c*, and show that those three cards are gone from the pack.

The

(c) This experiment may be performed without an assistant, if a table be placed against the partition, and the string from the glass be made to pass through a leg of it, and communicate with a small trigger, which you may easily push down with your foot; and at the same time wiping the glass with your handkerchief, as if to make the card appear the more conspicuous. It may also be diversified, by having the figure of a head, suppose that of some absent friend, in the place of the card.

Performances with the Card

LEGER DEMAIN.

Sect. III.

Performances with the Cards.

The vase must be placed so high that the inside cannot be seen by the company. You may perform this experiment also without an assistant, by fixing a weight to the end of the silk line, which is to be placed on a support, and let down at pleasure by means of a spring in the partition.

The divining perspective glass.

17. Let a small perspective glass be made, that is wide enough, at the end where the object glass is placed, to hold a table similar to the following.

1.131	10..132	19.133
2.231	11..232	20.233
3.331	12..332	21..333
4.121	13..122	22.123
5.221	14..222	23.223
6.321	15..322	24.323
7.111	16..112	25.113
8.211	17..212	26.213
9.311	18..312	27.313

Take a pack of cards that consists of 27 only, and giving them to a person, desire him to fix on any one, then shuffle them, and give the pack to you. Place the 27 cards in three heaps, by laying down one alternately on each heap; but before you lay each card down, show it to the person, without seeing it yourself; and when the three heaps are finished, ask him at what number, from 1 to 27, he will have his card appear, and in which heap it then is? Then look at the heap through the glass, and if the first of the three numbers which stands against that number it is to appear at be 1, put that heap at top; if the number be 2, put it in the middle; and if it be 3, put it at bottom. Then divide the cards into three heaps, in the same manner, a second and third time, and his card will then be at the number he chose.

For example: Suppose he desire that his card shall be the 20th from the top, and the first time of making the heaps he say it is in the third heap: you then look at the table in the perspective, holding it at the same time over that heap, and you see that the first figure is 2; you therefore put that figure in the middle of the pack. The second and third times you in like manner put the heap in which he says it is, at the bottom, the number each time being 3. Then looking at the pack with your glass, as if to discover which the card was, you lay the cards down one by one, and the 20th card will be that he fixed on.

You may show the person his card in the same manner, without asking him at what number it shall appear, by fixing on any number yourself.

The foregoing experiments with the cards will be found sufficient to explain most others of a similar nature that have or may be made: the number of which is very great. To perform those we have described

requires no great practice; the two principal points are, the making the pass in a dexterous manner, and a certain address by which you influence a person to draw the card you present. Those that are performed by the long card are in general the most easy, but they are confined to a pack of cards that is ready prepared; whereas those which depend on making the pass, may be performed with any pack that is offered.

Experiments with Sympathetic Inks.

SECT. III. Experiments with Sympathetic Inks. [See Sympathetic Inks.]

EXPERIMENTS with CLASS I.

1. MAKE a book of 70 or 80 leaves; and in the The book-cover at the end of it let there be a case, which opens of fate, next the binding, that it be not perceived.

At the top of each right hand page write any question you please; and at the beginning of the book let there be a table of all those questions, with the number of the page where each is contained. Then write with common ink, on separate papers, each about half the size of the pages in the book, the same questions that are in the book, and under each of them write, with the ink made of the impregnation of saturn, or the solution of bismuth, the answer.

Soak a double paper in the vivifying liquor made of quicklime and orpiment, or the phlogiston of the liver of sulphur, and place it, just before you make the experiment, in the case that is in the cover of the book.

Then deliver some of the papers on which the questions are wrote to the company; and, after they have chosen such as they would have answered, they put them in those leaves where the same questions are contained, and, shutting the book for a few minutes, the sulphureous spirit with which the paper in the cover of the book is imbibed, will penetrate the leaves, and make the answers visible, which will be of a brown colour, and more or less deep in proportion to the time the book has been closed (D).

2. Make a box about four inches long, and three The margins wide, as ABCD, and quite shallow. Let it shut with vellous por-hinges and fasten with a hook; and let it have two trait, bottoms, the lowest of wood, that draws out by a fig. 17. groove, and the uppermost of pasteboard. Between these two bottoms is to be placed a paper dipped in the vivifying liquor mentioned in the last experiment. Let there be also a board of the same size with the inside of the box, which being placed in it may press a paper against the pasteboard bottom.

Then take several pieces of paper, of the same size with the inside of the box, and draw on them the figures of men and women, in different attitudes and employments, as walking, riding, reading, writing, &c. These figures must be drawn with a new pen, or pencil, dipped in the impregnation of saturn.

Being thus provided, and having privately placed the paper dipped in the vivifying liquor between the two bottoms, you tell a person you will show him what an absent

(D) If a weight be placed upon the book, the effect will be the sooner produced. Or you may put the book in a box that will press it close down.

Experi-
ments with
Symplic-
tic Inks.

about friend of his is doing at the present hour. You then give him the paper adapted to the employment you intend, and tell him to write his friend's name at the bottom, that you may not change the paper. Then placing that paper next the pasteboard bottom, and putting the piece of wood over it, you shut the box. After amusing him with discourse for three or four minutes, you take out the paper, when he will see his friend in the employment you have assigned him.

The artifi-
cial hand.

3. Let a workman make a hand of wood, as in fig. 16. fixed at the end next the elbow to the piece E, the ends of which go through the screws CD and EF. The fore and middle fingers, and the thumb, are to be moveable at their joints. There must go a wire through the arm, that is fixed at one end to the fore finger, and at the other to the piece E, round which it is to move: under the two joints of the two fingers are also placed two small springs, which are to raise it up.

To the fore finger and thumb fix two small rings, through which a pin may be put, so as not to impede their motion. Under the arm at the point I, place a small brass roller, which serves to sustain the arm.

The pedestal on which this hand is placed must be at least a foot long, if the hand be of the natural size, and about eight inches wide. The pedestal must be hollow, and at the part ST there must be an opening about three inches long and two inches wide; the whole pedestal may be covered with a thin stuff, by which the hole will be concealed. There is to be a valve, or sort of trap door, on the inside of the pedestal, which is to fasten against the opening.

Over the hand and pedestal place a glass frame, as in the figure: cover the hand with fine leather of flesh colour, and decorate the arm with a ruffle and cuff, which will entirely conceal the machinery.

Then take a number of cards, and write on them different questions; and on the same number of papers write, with the impregnation of lead, the answers. Give the cards to any one, and let him choose a question; and you place the paper with the answer under the pen in the hand, letting him first see there is no writing on it (E). Now the pedestal being placed against a partition, the end F is to go through it. Therefore an assistant, upon a signal given, turns a handle fixed to F; and, as the piece E turns round, the wires that move the fingers and thumb are alternately lengthened and shortened, by which their joints are kept in continual motion; and the screw at the same time turning gently from F towards G, gives the whole arm a motion which very much resembles that of nature (F).

The hand and pen serve here merely to assist the il-

lusion: but if a bit of sponge, dipped in the vivifying liquor, be placed at the end of the pen, as it goes over the writing on the paper, it will make it become gradually visible, and in this case the trap door and dipped paper may be omitted (G).

Experi-
ments with
Symplic-
tic Inks.

The writ-
ing against
the wall.

DECEPTION with CLASS II.

4. Take several pieces of paper, of a size that you can put in any book that will go into your pocket, and write at the top of each of them a question, with common ink, and under it write the answer with the solution of gold or silver. Give any of these papers, closely wrapt up, to a person, and tell him to place it against the wall of his chamber, and keeping the door locked he will next day find the answer wrote on it.

As the gold ink will sometimes give a yellow cast to the paper, you may previously give a slight tincture of that kind to the papers you use for this purpose.

DECEPTION with CLASS III.

5. On different papers draw the figures of several leaves or flowers with one of the colourless juices mentioned: then take one of the corresponding leaves or flowers, and laying it on an iron plate, over a chafing-dish of hot coals, let it burn to ashes. Put these ashes into a sieve, in which there is some very fine steel filings, and sift them over the paper on which the flower is drawn, when they will adhere to the glutinous liquor, and form an exact representation of the figure of the leaf or flower.

Magical
vegetation

DECEPTIONS with CLASS IV.

6. Make a little triangular box, each side of which is to be about five inches, and let its inside be divided into three parts. The first part A, which makes the bottom of the box, is to be covered by the second part B, in form of a case, and let the top C exactly cover the part B, as is expressed in the figure and the profiles.

The talis-
man, fig. 7.

Upon the bottom of the box let there be a plate of copper, about one-twentieth of an inch thick, on which let there be a number of hieroglyphic characters contiguous to each other, and cut in different sorts of metal.

On the top of the cover place a knob O, that goes through it, and to which the copper triangle Q is to be fixed occasionally, in such manner as it may go into the case B. There must be a space of one quarter of an inch between the triangle Q and the bottom of the case B; into which another plate of copper, of that thickness, may be placed.

The outside of this talisman may be decorated with uncommon

(E) The paper dipped in the vivifying liquor is to be previously placed against the opening in the table, and supported by the trap door.

(F) This might be performed without an assistant, by means of a trigger placed in the leg of the table, and communicating with the handles, which the operator might thrust down with his foot. Where expence is not regarded, there may be a complete figure of a man in wood, or plaster of Paris, seated by the table.

(G) You may also have a glass ink-stand with some of the vivifying liquor, into which the pen may be dipped, and it will then appear to write with common ink. The spectators should not be permitted to come very near this machine, which may be applied to several other purposes.

Experi- uncommon figures or characters, to give it the appear-
ments with
mpathetic-
Inks. of greater mystery.

On several pieces of paper, of the same size with the
inside of the talisman, write different questions in com-
mon ink, and write the answers in those different sorts
of sympathetic ink that appear when heated, observ-
ing that each word of the answer is to be wrote in a
different ink.

Having properly heated the triangle, and placed it
under the cover, you introduce the talisman, and tell
any one of the company to choose one of the papers
on which the questions are wrote, and place it in the
talisman, and he will immediately have an answer
wrote on that paper, the words of which will be of
different colours, according to the different metals of
which the talisman is composed. The paper being
placed in the talisman, and the cover placed over it,
the heat of the triangle will make the answer visible
in a few moments. This experiment may be repeat-
ed if the triangle be made sufficiently hot; and two
papers may be placed in the talisman at the same
time.

This deception, when well executed, occasions a
surprise that cannot be conceived by a mere descrip-
tion.

7. Make a wooden pedestal AB, about ten inches
long, eight wide, and one deep: and at one end erect a
box C, about ten inches high, eight broad, and two and
a half deep.

The top of the pedestal must slide in a groove, on
which inscribe a dial M, of six inches diameter, and
which is to be divided into nineteen equal parts, in
twelve of which write the names of the months, and
mark the respective signs of the zodiac; and in the
seven other divisions, which must be next the end B,
write the days of the week, and mark the figures of
the planets. Next the inner circle NO, make an
opening into the box, of about one-tenth of an inch.
On the centre of the dial place an index that turns
freely on its centre.

Within the pedestal place a pulley P, about four
inches diameter, which is to turn on an axis that is
directly under the centre of the dial; and on the up-
per part of that axis fix a bent index R, which comes
out at the opening made by the inner circle (H), and
passes over those seven divisions only on which are wrote
the days of the week.

Within the box C, let there be two rollers S and
T, as in the figure: let that of S contain a spring;
and at the end of T let there be a pulley V, of three
quarters of an inch diameter, round which goes a
string or thread that passes under the small pulley X,
and is fastened to that of P: so that when the last
pulley makes about one-third of a turn, that of V may
make three or four turns.

There must also be a scroll of paper, about two feet
long, and each end of which must be passed to one of
the rollers. In the front of the box, between the two
rollers, make an aperture D, about four inches long,

and one inch and a half wide: to this opening let there
be a little flap or slider, by which it may be closed at
pleasure.

Experi-
ments with
Sympathe-
tic Inks.

The apparatus being thus disposed, place the index
R successively against each of the divisions marked
with one of the planets; and as the paper is gradually
wound up the roller, mark, against that part which is
at the aperture D, the name of one of the following
sibyls:

- The Hellepontian }
Cumean }
Artemilian } sibyl.
Phrygian }
Albuncean }
Persian }
Libyan }

On each of the seven cards write a different que-
sition, and draw one of the seven planets. Next, take
a memorandum book that contains seven leaves, and
on each of them write the name of one of the fore-
going sibyls; in each of the leaves place several pieces
of paper, and on each of them write, with the sym-
pathetic ink that does not appear till the paper is heat-
ed, different answers to the same question.

Then give a person the seven cards on which the
questions are wrote, and tell him to choose one of them
privately, and conceal the rest, so that it cannot possibly
be known which of them he has chosen.

Next, tell him to place the index that points to the
month against that in which he was born (1), and to
place the index of the planets against that which is on
the card he has chosen, and which is to preside over
the answer: you tell him to do this privately, that
no one may see him, and after that to cover the dial
with his handkerchief. Then let him open the door
that is before the aperture in the box, and tell you the
name of the sibyl there visible.

You then open the memorandum book, and taking
out the papers that are in the leaf where the name of
the sibyl just mentioned is wrote, you desire him to
choose any one of them he thinks proper. The talis-
man used in the last experiment being properly heated,
is then to be introduced, when you direct the person
to put the blank paper into it; and taking it out
a few moments after, he will find the answer to his
question.

To make this operation appear the more extraordi-
nary, it will be proper to have a small press or cup-
board, at the back of which there is a door that
opens into an adjoining room, by which means an as-
sistant having prepared the talisman, may place it in
the cupboard the moment before it is wanted. This
contrivance will be useful on many other occasions.

8. Provide an urn of wood or metal about six
inches high, and two and a half diameter in the widest
part, and of such figure in other respects as you think
proper (see fig. 9.) Let there be a cylinder of cop-
per C, (fig. 10.) of about one eighth of an inch dia-
meter,

The magi-
c. urn.

(H) If the axis be made to pass through the top of the pedestal, this opening will not be necessary.
(1) These months and the index are of no other use than to give the experiment an air of greater my-
stery.

Experiments with Sympathetic Inks.

meter, which is to fill a hole AB made in the urn. The top of this cylinder is to be in the top of the urn, so that it may be easily taken out. To this urn there must be a cover D, which fits it exactly.

On a small square piece of paper draw the figure of a flower or leaf, with that sort of sympathetic ink whose colour most resembles it. You then present several sorts of flowers or leaves to a person, and desire him to choose any one of them. Then put that flower on a chafingdish of hot coals; and taking the paper on which it is secretly drawn, you give it to the person to examine, and then put it in the urn, having previously heated the cylinder (κ). Then taking some of the ashes of the burnt flower, you strew them over the paper, after which you take it out and show the company the figure of that flower. While the flower is burning, you may sprinkle some powder over it, suppose that of saltpetre; and by that, mixed with the ashes of the flower, the company may imagine the effect is produced.

The press or cupboard mentioned in the preceding experiment, will be here very convenient for heating the cylinder and placing it in the urn. A similar deception may be performed by putting the paper in a copper vessel, that may be placed on an iron plate over the chafingdish in which the flower is burnt. But this method has not so mysterious an appearance as the other, and in some persons may cause a suspicion that the effect is produced by heat.

The convertible cards.

9. To perform this experiment, you must observe, that there are several letters which may be changed into others, without any appearance of the alteration; as, the *a* into *d*, the *c* into *a, e, d, g, o, or q*, the *i* into *b, d, or l*, the *l* into *t*, the *o* into *a, d, g, or q*, the *v* into *y*, &c.

Take a parcel of cards, suppose 20, and on one of them write, with the ink of the fourth class, the word *law* (L), and on the other, with the same ink, the words *old woman*; then holding them to the fire, they will both become visible. Now you will observe, that by altering the *a* in the word *law* into *d*, and adding *o* before the *l*, and *oman* after the *w*, it becomes *old woman*. Therefore, you make those alterations with the invisible ink, and let it remain so. On the rest of the cards you write any words you think fit.

Present the cards in such a manner to two persons, that one of them shall draw the word *law*, and the other the words *old woman*. You then tell the person who drew the word *law*, that it shall disappear, and the words on the other card shall be wrote in its place; and that you may not change the cards, desire each of the parties to write his name on the cards. Then putting the cards together, and holding them before the fire, as if to dry the names just wrote, the word *law* will presently change into *old woman*.

This experiment may be varied by fixing on a word that may be changed into three other words, and making four persons draw the cards on which those words

are wrote; and it may be further diversified by choosing three such words, as that the first can be changed into the second, and the second into the third. You then tell him who drew the first word, that it shall be changed into that drawn by the second person; and him you tell, that his word shall be changed into that of the third person.

10. Write on several slips of paper different questions, and such as may be answered by the name of some person; for example, Who is the merriest man in the company? Answer, Mr ***. To whom will Miss *** be married? Answer, To Mr ***. These questions are to be wrote in the sympathetic ink of this class, and exposed to the fire, and the answers wrote in the same ink, and left invisible. The papers are to be folded in form of letters, and in such manner that the part where the name is wrote shall be directly under the seal, and the heat of the wax will make it visible. Then give the letter to the person who requires the answer, and he will find it plainly wrote.

A deception similar to this may be made with a number of blank cards, on each of which an ace of spades is drawn with the invisible ink; then let a person choose any one of them, and enclose it in a letter-case, prepared in such a manner that the figure of the ace shall be directly under the seal, and on opening the letter it will be immediately visible.

DECEPTIONS with CLASS V.

11. Have a box that is divided into three parts after the same manner as the talisman in the 21st experiment, except that, instead of being triangular, it must be of a long square (see fig. 14.) Divide its top B into two equal parts D and E, as in fig. 13. and to the part D adjust a plate of copper L, about one quarter of an inch thick, and under both the plate L and the opening E place a cloth. The upper part C must have a button by which it may be fixed on the cover B, so as to appear of one piece with it.

At the bottom of the box place a piece of cloth, or other stuff, on which you may stamp certain mysterious characters, and observe that the bottom of the cover must rest upon the cloth.

Then provide a slip of paper GH (fig. 12.) of the same size with the bottom of the box; and at each end of it write, with the green sympathetic ink, the name of a different card, and make some private mark by which you can tell at which end each name is wrote (M).

Take a parcel of cards, and offer those two of them whose names are wrote on the paper to the two persons, that they may draw them. You tell the parties to keep their cards to themselves, and you propose to make the names of those cards appear upon a slip of paper, which you put into the box. You then ask which name of the two cards shall appear first. The copperplate being previously heated and placed in the cover,

(κ) There are some sorts of sympathetic inks that require much more heat than others.

(i.) These letters should not be joined.

(M) That there may be no suspicion of the paper being prepared, you may cut it from a whole sheet, before the company, having previously wrote the names.

Experi-
ents with
sympathe-
tic Inks.

cover, you put it over that end of the paper on which is the name required, and it will presently appear. Then taking the paper out and showing the name wrote, you put it in again, turning the other end to the side of the box where the plate is, and it will in like manner become visible.

The first name may be made to disappear at the same time that the second appears, if the cloth at the end opposite to that where the plate is be made damp.

inter-
changed
to spring.

12. Take a print that represents winter, and trace over the proper parts of the trees, plants, and ground, with the green sympathetic ink; observing to make some parts deeper than others, according to their distance. When those parts are dry, paint the other objects with their natural colours. Then put the print in a frame with a glass, and cover the back of it with a paper that is pasted over its border only.

When the print is exposed to the heat of a moderate fire, or to the warm rays of the sun, all the grass and foliage will turn to a pleasing green; and if a yellow tint be given to some parts of the print, before the sympathetic ink be drawn over, this green will be of different shades; and the scene that a minute before represented winter, will now be changed to spring. When this print is placed in the cold, winter will again appear, and will again be driven away by the warm rays of the sun. This alternate change of seasons may be repeated as often as you please; remembering, however, as was before observed, not to make the print at any time too hot, for then a faded autumn will for ever remain.

DECEPTIONS with CLASS VII.

he revivi-
d bou-
quets.

13. Provide a number of artificial flowers, such as roses, jonquils, pinks, or any other you find convenient. These flowers must be made of white thread or silk, and their leaves of parchment. Dip the roses in the red sympathetic ink, the jonquils in the yellow, the pinks in the violet, and their leaves in a solution of salt or tartar. When they are all dry, form them into small bouquets, which will all appear white, and may be used in this experiment, either the day they are dipped, or several days after.

You take one of these bouquets, and after showing the company that every part of it is white, you dip it in an infusion of any of the blue flowers mentioned under the article *COLOUR-MAKING*, N^o 13. and, drawing it presently out, all the flowers and leaves will appear in their natural colours (N).

he trans-
coloured
writing.

14. Write on a paper, with the violet liquor, as many letters or words as you please; and ask any person whether he will have that writing turn to yellow, green, or red.

Have a sponge with three sides that you can readily distinguish, and dip each of its sides in one of the three sympathetic inks. Draw the side of the sponge that corresponds to the colour the person has chosen, over

the writing once only; and it will directly change to the colour required (O).

Miscellane-
ous Per-
formances.

SECT. IV. Miscellaneous Performances.

15. A person having an even number of counters in one hand, and an odd number in the other, to tell in which hand the odd or even number is.—Let the person multiply the number in his right hand by an odd number, and the number in his left hand by an even number, and tell you if the sum of the products added together be odd or even. If it be even, the even number is in the right hand; but if it be odd, the even number is in the left hand.

Example.

1. Number in the right hand	} 18	In the left	7
Multipliers	3		2
	<hr/>		<hr/>
	54		14
	14		
	<hr/>		
Their sum	68		
	<hr/>		
2. Number in the right hand	} 7	In the left	18
Multipliers	3		2
	<hr/>		<hr/>
	21		36
	36		
	<hr/>		
Their sum	57		
	<hr/>		

16. To tell, by the dial of a watch, or what hour any person intends to rise.—Let the person set the hand of the dial to any hour he pleases, and tell you what hour that is: and to the number of that hour you add, in your mind, 12. Then tell him to count privately the number of that amount upon the dial, beginning with the next hour to that on which he proposes to rise, and counting backwards, first reckoning the number of the hour at which he has placed the hand. An example will make this plain.

Suppose the hour at which he intends to rise be 8, and that he has placed the hand at 5. You add 12 to 5, and tell him to count 17 on the dial, first reckoning 5, the hour at which the index stands, and counting backwards from the hour at which he intends to rise; and the number 17 will necessarily end at 8, which shows that to be the hour he chose.

That the hour at which the counting ends must be that on which he proposed to rise, will be evident on a little reflection; for if he had begun at that hour and counted 12, he would necessarily have come to it again; and calling the number 17, by adding 5 to it, only serves

(N) The liquor should be put in a sort of jar with a narrow neck, that it may not be seen by the company: and you should draw the flowers gently cut that the liquor may drop if thin, and they may have time to acquire their colours.

(O) The sponge should be well cleaned immediately after the experiment.

Miscellaneous Performances.

serves to disguise the matter, but can make no sort of difference in the counting.

17. If the number 11 be multiplied by any one of the nine digits, the two figures of the product will always be similar. As follows :

11	11	11	11	11	11	11	11	11	11
<u>1</u>	<u>2</u>	<u>3</u>	<u>4</u>	<u>5</u>	<u>6</u>	<u>7</u>	<u>8</u>	<u>9</u>	
11	22	33	44	55	66	77	88	99	

Place a parcel of counters on a table, and propose to any one to add, alternately, a certain number of those counters, till they amount to 100, but never to add more than 10 at a time. You tell him, moreover, that, if you stake first, he shall never make the even century, but you will. In order to which, you must first stake 1, and remembering the order of the above series, 11, 22, 33, &c. you constantly add, to what he stakes, as many as will make one more than the numbers of that series, that is, as will make 12, 23, 34, &c. till you come to 89, after which the other party cannot make the century himself, nor prevent you from making it.

If the other party has no knowledge of numbers, you may stake any other number first, under ten, provided you take care to secure some one of the last terms as 56, 67, 78, &c.

This deception may be performed with other numbers; and in order to succeed, you must divide the number to be attained by a number that has one digit more than what you can stake each time, and the remainder will be the number you must first stake. Observe, that, to be sure of success, there must be always a remainder. Suppose, for example, the number to be attained is 52, making use of a pack of cards instead of counters, and that you are never to add more than 6: then divide 52 by the next number above 6, that is, by 7, and the remainder, which is 3, will be the number you must stake first; and whatever the other stakes, you must add as much to it as will make it equal to the number by which you divided, that is 7. Therefore, if his first stake be 1, you must stake 6, &c. so that your second stake will make the heap 10, your third stake will make it 17, and so on, till you come to 45, when, as he cannot stake more than 6, you must make the number 52.

In this, as in the former case, if the other person has no knowledge of numbers, you may stake any number first under 7; or you may let him stake first, only taking care to secure either of the numbers 10, 17, 24, 31, &c. after which he cannot make 52, if you constantly add as many to his stake as will make it 7.

18. A person privately fixing on any number, to tell him that number.—After the person has fixed on a number, bid him double it and add 4 to that sum, then multiply the whole by 5; to the product let him add 12, and multiply the amount by 10. From the sum of the whole let him deduct 320, and tell you the remainder; from which, if you cut off the two last figures, the number that remains will be that fixed on.

Example.

Let the number chosen be	-	-	7
Which doubled is	-	-	14

And 4 added to it, makes	-	-	18
Which multiplied by 5, gives	-	-	90
To which 12 being added, it is	-	-	102
That multiplied by 10, makes	-	-	1020
From which deducting 320, the remainder is	-	-	700
And, by striking off the two cyphers, it becomes the original number	-	-	7.

19. Three dice being thrown on a table, to tell the number of each of them, and the order in which they stand.

Let the person who has thrown the dice double the number of that next his left hand, and add 5 to that sum; then multiply the amount by 5, and to the product add the number of the middle die; then let the whole be multiplied by 10, and to that product add the number of the third die. From the total let there be subtracted 250, and the figures of the number that remains will answer to the points of the three dice as they stand on the table.

Example. Suppose the points of the three dice thrown on the table to be 4, 6, and 2,

Then the double of the first die will be	-	-	8
To which add	-	-	5

To tell the number of points thrown by 3 dice without seeing them.

13
5

That sum multiplied by 5 will be	-	-	65
To which add the number of the middle die	-	-	6

And multiply the sum by	-	-	10
-------------------------	---	---	----

To that product add the number of the third die	-	-	2
---	---	---	---

Form the total	-	-	712
Subtract	-	-	250

And the three remaining figures will answer to the numbers on the dice, and show the order in which they stand.

20. Some person in company having put a ring privately on one of his fingers; to name the person, the hand, the finger, and the joint, on which it is placed.—Let a third person double the number of the order in which he stands who has the ring, and add 5 to that number; then multiply that sum by 5, and to the product add

To tell of what finger, joint, &c. a ring has been privately put.

10. Let him next add 1 to the last number if the ring be on the right hand, and 2 if on the left, and multiply the whole by 10: to this product he must add the number of the finger (counting the thumb as the first finger), and multiply the whole again by 10. Let him then add the number of the joint; and, lastly, to the whole join 35.

He is then to tell you the amount of the whole, from which you are to subtract 3535, and the remainder will consist of four figures, the first of which will express the rank in which the person stands, the second the hand (the number 1 signifying the right hand, and 2 the left), the third number the finger, and the fourth the joint.

Example. Suppose the person who stands the third in order has put the ring upon the second joint of the thumb of his left hand; then

To tell what number a person privately fixes on.

Miscellaneous Performances.	The double of the rank of the third person is	6
	To which add	5
	—	—
	Multiply the sum by	11
	—	5
	—	—
	To which add	55
	And the number of the left hand	10
	—	2
	—	—
	Which being multiplied by	67
	—	10
	—	—
	To which add the number of the thumb	670
	—	1
	—	—
	And multiply again by	671
	—	10
	—	—
	Then add the number of the joint	6710
	And lastly the number	2
	—	35
	—	—
	From which deducting	6747
	—	3535
	—	—
	The remainder is	3212

Of which, as we have said, the 3 denotes the third person, the 2 the left hand, the 1 the thumb, and the last 2 the second joint.

The burnt writing restored. 21. Cover the outside of a small memorandum book with black paper, and in one of its inside covers make a flap to open secretly, and observe there must be nothing over the flap but the black paper that covers the book.

Mix foot with black or brown soap, with which rub the side of the black paper next the flap; then wipe it quite clean, so that a white paper pressed against it will not receive any mark.

Provide a black lead pencil that will not mark without pressing hard on the paper. Have likewise a small box, about the size of the memorandum book, and that opens on both sides, but on one of them by a private method. Give a person the pencil, and a slip of thin paper, on which he is to write what he thinks proper: you present him the memorandum book at the same time, that he may not write on the bare board. You tell him to keep what he writes to himself, and direct him to burn it on an iron plate laid on a chafingdish of coals, and give you the ashes. You then go into another room to fetch your magic box above described, and take with you the memorandum book.

Having previously placed a paper under the flap in the cover of the book, when he presses hard with the pencil, to write on the paper, every stroke, by means of the stuff rubbed on the black paper, will appear on that under the flap. You therefore take it out, and put it into one side of the box.

You then return to the other room, and taking a slip of black paper, you put it into the other side of the box, strewing the ashes of the burnt paper over it. Then shaking the box for a few moments, and at the same time turning it dexterously over, you open the other side, and show the person the paper you first put

in, the writing on which he will readily acknowledge to be his.

22. Take two guineas and two shillings, and grind part of them away, on one side only, so that they may be but of half the common thickness; and observe that they must be quite thin at the edge: then rivet a guinea and a shilling together. Lay one of these double pieces with the shilling upwards, on the palm of your hand, at the bottom of your three first fingers; and lay the other piece, with the guinea upwards, in like manner, in the other hand. Let the company take notice in which hand is the guinea, and in which the shilling. Then as you shut your hands, you naturally turn the pieces over; and when you open them again, the shilling and the guinea will appear to have changed their places.

23. Provide a round tin box, of the size of a large snuff box; and in this place eight other boxes, which will go easily into each other, and let the least of them be of a size to hold a guinea. Each of these boxes should shut with a hinge: and to the least of them there must be a small lock, that is fastened with a spring, but cannot be opened without a key: and observe that all these boxes must shut so freely, that they may be all closed at once. Place these boxes in each other, with their tops open, (see fig. 12.) in the drawer of the table on which you make your experiments; or, if you please, in your pocket, in such a manner that they cannot be displaced.

Then ask a person to lend you a new guinea, and desire him to mark it, that it may not be changed. You take this piece in one hand, and in the other you have another of the same appearance; and putting your hand in the drawer you slip the piece that is marked into the least box, and, shutting them all at once, take them out. Then showing the piece you have in your hand, and which the company suppose to be the same that was marked, you pretend to make it pass through the box, and dexterously convey it away.

You then present the box, for the spectators do not yet know there are more than one, to any person in company; who, when he opens it, finds another, and another, till he comes to the last, but that he cannot open without the key (see fig. 13.) which you then give him, and retiring to a distant part of the room, you tell him to take out the guinea himself, and see if it be that he marked.

This deception may be made more surprising, by putting the key into the snuff box of one of the company; which you may do by asking him for a pinch of his snuff, and at the same time conceal the key, which must be very small, among the snuff: and when the person who is to open the box asks for the key, you tell him that one of the company has it in his snuff box. This part of the deception may likewise be performed by means of a confederate.

24. ABCD, fig. 15. represents a small wooden box seven or eight inches long, two and a half broad, and half an inch deep; the bottom of which, by means of two cross pieces, is divided into three equal parts. EFGH represents the lid, which is fastened to the bottom by a hinge, and has in front a small plate shaped like a lock, and two small eyes for hooks which serve to fasten it when it is shut. ILM are three small flexible

The three magic pictures.

Plate CCXC. fig. 14, 15.

Miscellaneous Performances.

springs, flat, and about $\frac{1}{2}$ inch long. NOP are three wooden tablets of the same size, upon which are marked the figures 3, 4, and 5. The tablets are of different thicknesses, and the difference is so small as not to be perceived by the eye. The outside of the box is covered with shagreen or morocco leather, and on the inside with silk taffety; these coverings being indispensably necessary to hide the three small springs above mentioned. Fig. 14. shows the two hinges E and F bent close to the top of the lid ABCD; the piece of brass G, similar to a lock, being also curved to the lid. A small brass stud is rivetted upon the end of each of these springs inserted into the lid, and passes through the curved part of each of the hinges and the lock; so that on the outside they appear as the heads of small pins which fasten them upon the lid. These small studs will be elevated more or less according to the thicknesses of the tablets, that may be shut up in each of the partitions in which they may be found placed; so that the tablet N elevates them more than the tablet O, and the latter less than P; though these elevations are but barely sensible to the sight or touch, and that by a person accustomed to look at or handle them. Thus it may be easily known in whatever order the tablets are placed, however carefully shut; and consequently the numbers named as enclosed.

Give now the box to any indifferent person, leave him at liberty to form with the tablets any number he pleases, desiring him to return the box well shut up; then taking the box, and determining by the touch, or rather by the eye, what order the tablets are in, it will be very surprising to hear you declare the number without seeing it.

N. B. It will still be equally possible to discover the number, though the tablets should be returned with the bottom upwards, or even though one should be withdrawn in order to defeat your design; particularly if care has been taken to make the studs remain even with the plates when a number is omitted.

The numerical table.

25. To discover any particular counter which has been secretly placed within a box that turns upon it.—This table, which is made of wood, is represented by A, fig. 16. It is of an hexagonal shape, and about three or four inches diameter. For the sake of neatness in appearance, a proportionably sized pillar with a foot is fixed to it. Round a centre there turns a small round box B of about $\frac{1}{2}$ inch diameter in the inside, the lid of which takes off at B. At the bottom of this box, near the circumference in the inside, is fixed a brass pin to fit a hole made in a flat ivory counter shown at b, fig. 17. The pin and counter are represented in fig. 18. which is a flat view of fig. 16. with the lid of the box B taken off. Opposite to the pin b, in the same figure, D represents a fine dot designed as a secret mark on the outside of the box, which serves always as a guide to the number of the counter privately placed in the inside of the box, as is afterwards particularly explained. Upon one of the corners of the table is an ivory mark C, fig. 16. and 18. which serves to place the spot a upon the counters in its proper position. See fig. 17. There are 12 counters fitted to the box B, marked 10, 20, &c. as far as 120, on the middle of each. On each of these counters is the hole b, fig. 17. and 18. which goes over the pin in the bottom of the box; and on one side of this hole a red or black

spot is placed in the following manner. When N^o 10 is put into the box, the spot must be so far to the left hand of the hole, that when it is brought to the mark C, fig. 18. the hole b will be opposite to the side marked 1. When N^o 20 is put in, the spot being brought to the mark C will carry the hole to the corner marked 2. When N^o 30 is put in, and the spot brought opposite to C, the hole will be brought against the side marked 3, as is shown in the figure, and so on for the rest. Therefore, as opposite to the brass pin, or hole on the counter on the outside of the box B, there is a secret mark D already mentioned, this must serve as an index to the number contained in the box, according as it is opposite to a side or corner of the table.

Give now the table with the box and the 12 counters to any person, and desire him to put one of the counters secretly into the box, keeping the rest to himself; and, after having placed the hole over the pin in the box, to place particularly, by turning the box round, the spot a against the mark C on the table. Let him then cover the box, give you the table, and keep the counters himself. Observe then privately what side or corner the secret outside mark D stands against, reckon the tens accordingly, and tell him the number.

26. To draw out of the well with a bucket any one of four liquors which have been previously mixed and put into it.—Provide two tin cylinders of seven or eight inches height; the diameter of the largest, represented by AB fig. 19. to be four inches, and that of the least, CD two inches. Place the small one within the larger, and connect them together by soldering to them four tin partitions, making the equal spaces e, f, g, h. Turn a piece of wood three inches thick, hollow within side, and lined with tin, of which a section is given, fig. 20. Into this the exterior cylinder should be closely fitted at a and b. Another circle of wood (of which a section is given fig. 21.), hollowed at a, b, and c, is also to be procured, and which may cover exactly the space between the two cylinders; and, lastly, let the whole be constructed in such a manner, that when these three separate pieces are placed together, they may represent a well, as in fig. 22. The two brass or wooden pillars AA, with the axis and handle C, serve to let down and draw up a small glass bucket B, an inch and a half in diameter. Make also four tin reservoirs of the same height with the cylinder, and so shaped as to fill the four spaces e, f, g, h, (fig. 19.) which must be well closed at their extremities B and C. On the top of each make a small hole about the tenth part of an inch diameter, and solder at the base C a small tube D, the end of which should be bent towards the inside of the well when the reservoir is placed in it. Solder on the top of each reservoir a small spring lever and prop ABDE, fig. 23. This spring will serve always to press the end of the lever D down upon the hole at the top of the reservoir B; and in order to cover it more perfectly, a small piece of leather is to be glued on to the end of the lever D. Lastly, A small peg or stud C is placed at the end of each of the levers, and which must be close to the under part of the wooden circle which covers the reservoirs. To conceal these studs, and at the same time to be able to press upon them with the fingers, circular apertures, as shown in fig. 21. must be made in the piece of wood, the top covered

Miscellaneous Performances.

Miscellaneous Performances.

covered with a piece of vellum, and the whole neatly painted with oil colour.

If now you plunge one of these reservoirs perpendicularly into any liquor, in pressing on the stud, so as to uncover the hole at the top, it will be filled with the liquor in proportion to the depth to which it is immersed; and as long as the lever continues to press upon the hole by means of the spring, the liquor cannot run out for want of air, though it will do so the moment the stud is pressed upon and the air admitted. If the reservoir is properly placed, then the liquor will flow out of it into the glass bucket when let down to a proper depth.

Fill now the four reservoirs with the four different liquors; putting them in their places, and covering them with the circular top. Take a quantity of the same liquor, mix them well together, and pour the whole into the well; after which you may draw out any one which the company desires, by letting down the bucket, and pressing secretly upon the stud belonging to the reservoir which contains it, and which will thus discharge the liquor it contains.

27. Provide a small tin mortar, that is double, as A (fig. 8.), whose bottom B turns round on an axis, by means of a spring which communicates with the piece C. There must be a hollow space under the false bottom. To the under side of the bottom fasten, by a thread of fine silk, a flower, with its stalk and leaves.

Then take a flower that exactly resembles the other, and plucking it from the stalk, and all the leaves from each other, put them into the mortar, and pound them with a small pestle; after which you show the mortar to the company, that they may see the parts are all bruised.

Then taking the mortar up in your hands, you hold it over the flame of a lamp or candle, by whose warmth the flower is supposed to be restored; and at the same time pressing the piece at C, the bottom will turn round, the bruised parts descend into the space under the bottom, and the whole flower will be at top: you then put your hand into the mortar, and easily breaking the silk thread, which may be very short as well as fine, you take the flower out and present it to the company.

There is an experiment similar to this, in which a live bird is concealed at the bottom of the mortar, and one that is dead is pounded in it: after which, by the motion of the bottom, the live bird is set at liberty. But surely the pounding a bird in a mortar, though it be dead, must produce, in persons of any delicacy, more disgust than entertainment.

28. Procure a tin box ABCD (fig. 1.) about eight inches high, four wide, and two deep, and let it be fixed on the wooden stand E. On two of the insides let there be a groove FG; and in the front an opening I, three inches wide and one high.

At the back of the box let there be a little tin door, that opens outward, by which two wax candles M may be put in. Let the top of the box have a cover of the

same metal, in which there are several holes, and which may be taken off at pleasure.

Provide a double glass OP (fig. 2.) constructed in the same manner as that in the last experiment. On one of its sides you are to paste a black paper, the length of which is to be divided into three parts, and the breadth into fifteen; in every two of these fifteen divisions you cut out letters, which will make in the whole three answers to three questions that may be proposed. On the other side of the glass paste a very thin paper, and to the top fasten a small cord, by which they may be made to rise or descend in the groove FG.

Then take a slip of pasteboard RS (fig. 3.) one inch and a half wide and three inches long, which is to be divided into fifteen equal parts similar to those of the paper OP, and cut out spaces, as in the figure, so that this paper, sliding horizontally before OP, will either cover or conceal the letters cut in that.

This pasteboard is to slide between two brass wires, and is to be fastened to one side of the box, by a string that communicates with a small brass spring; and to the other side, by a string fastened to the box by a small piece of wax, so situated that the string may be easily set at liberty by the heat of the candles placed in the box.

Take a parcel of cards, and write on them different questions, three of which are to correspond with the answers on the glass. Shuffle these cards, and let a person draw any one of the three questions. Then by raising the glass you bring the answer against the hole in the front of the box. You next place the candles in the box, the heat of which will melt the wax that holds the paper RS, which being then drawn by the spring, the answer will be visible; and in proportion as the composition between the glasses becomes diluted by the increase of the heat, the letters will become more strongly illuminated.

The letters cut in the paper may be made to answer several different questions, as has been explained in other experiments; and the whole parcel of cards may consist of questions that may be answered by one or other of the three divisions in the paper.

29. Make a thin box ABCD (fig. 4.), with a cover M, that takes off. Let this box be supported by the pedestal FGHI, of the same metal, and on which there is a little door L. In the front of this box is to be a glass O.

In a groove, at a small distance from O, place a double glass of the same sort with that in the last experiment. Between the front and back glasses place a small upright tin tube supported by the cross piece R. Let there be also a small chafingdish placed in the pedestal FGHI. The box is to be open behind. You privately place a flower (Q) in the tin tube R; and presenting one that resembles it to any person (R), desire him to burn it on the coals in the chafingdish.

You then strew some powder over the coals, which may be supposed to aid the ashes in producing the flower; and then put the chafingdish in the pedestal,

under the box. As the heat by degrees melts the composition between the glasses, the flower will gradually appear; but when the chafingdish is taken away, and the power of the ashes is supposed to be removed, the flower soon disappears.

For entertaining experiments, illusions, &c. of a philosophical nature, see the articles ACOUSTICS, CATOPTICS, CHROMATICS, DIOPTRICS, PYROTECHNICS, SCIENCE, *Amusements of*.

Miscellaneous Performances.

L E G

Leger Line, Leghorn.

LEGER LINE, in *Music*, one added to the staff of five lines, when the ascending or descending notes run very high or low; there are sometimes many of these lines both above and below the staff, to the number of four or five.

LEGHORN, anciently called *Liburnus Portus*, but by the modern Italians *Livorno*, a handsome town of Italy, in the duchy of Tuscany, and a free port, about 30 miles south-west from Florence, in the territory of Pisa. The only defect of the harbour is its being too shallow for large ships. Cosmo I. had this town in exchange for Sarzana, from the Genoese; and it is the only sea port in the duchy. It was then but a mean unhealthy place; but is now very handsome, and well built, with broad, straight, parallel streets. It is also well fortified; but wants good water, which must be brought from Pisa, 14 miles distant. It is about two miles in circuit, and the general form of it is square. Part of it has the convenience of canals; one of which is five miles in length, and, joining the Arno, merchandise and passengers are thus conveyed to Pisa. The port, consisting of two havens, one for the duke's galleys, and the other for merchant ships, is surrounded with a double mole, above a mile and a half in length, and defended, together with the town, by a good citadel, and 12 forts. Roman Catholics, Jews, Greeks, Armenians, Mahometans, and even the English factory, are indulged in the public exercise of their religion; but other Protestants must be satisfied with the private. The trade carried on here is very great, and most of it passes through the hands of the Jews. Though only two piasters, or scudi, are paid for every bale, great or small, imported or exported, yet the duties on all provisions and commodities brought from the continent to the town are very heavy. The number of the inhabitants is said to be about 45,000; and one third of these are Jews, who live in a particular quarter, but without any mark of distinction, and have a fine synagogue. They have engrossed the coral manufactory, have a considerable trade, and possess the chief riches of the place. The garrison consists of 2000 men. The walks on the ramparts are very agreeable. There is good anchorage in the road; but ships riding there are much exposed to the weather and the Barbary corsairs. The number of English families in Leghorn, some years ago, amounted to about 36; and they were formerly much favoured by the government. The power of the jurisdiction is limit-

L E G

ed to ecclesiastical matters and Roman Catholics. There are a great many Turkish slaves here, brought in by the duke's galleys, who are often sent out on a cruize against the corsairs of Barbary. The lighthouse stands on a rock in the sea; near which is the lazaretto, where quarantine is performed. Another source, from which the duke draws a great revenue, is the monopoly of brandy, tobacco, and salt; but that, with the heavy duties, makes provisions dear. The Turks, who are not slaves, live in a particular quarter, near that of the Jews. The common prostitutes also have a particular place assigned them, out of which they must not be seen, without leave from the commissary. The number of the rowers in the galleys, whether Turkish slaves, criminals, or volunteers, is about 2000. In the area before the *darfena* or inner harbour, is a fine statue of Duke Ferdinand, with four Turkish slaves, in bronze, chained to the pedestal. The ducal palace is one of the finest structures in the town, and the ordinary residence of the governor. Leghorn is the see of a bishop, and has a noble cathedral; but the other churches are not remarkable. Leghorn did not escape those changes in which the French revolutionary war involved the towns and states of Italy. E. Long. 11. 0. N. Lat. 43. 30.

Legio VII. Legion.

LEGIO VII. GEMINA, in *Ancient Geography*, a town or station of that legion in Asturias. Now *Leon*, capital of the province of that name in Spain. W. Long. 6. 5. S. Lat. 43.—Another **LEGIO**, a town of Galilee; from which Jerome determines the distances of the places in Galilee; not a bare encampment, though the name might originally be owing to that circumstance. It lay 15 miles to the west of Nazareth, between Mount Tabor and the Mediterranean. Now thought to be *Legune*.

LEGION, in Roman antiquity, a body of foot which consisted of different numbers at different periods of time. The word comes from the Latin *legere*, to choose; because, when the legions were raised, they made choice of such of their youth as were most proper to bear arms.

In the time of Romulus the legion consisted of 3000 foot and 300 horse; though, after the reception of the Sabines, it was augmented to 4000. In the war with Hannibal, it was raised to 5000, after this it sunk to 4000 or 4500; this was the number in the time of Polybius. The number of legions kept in pay together, differed according to times and occasions. During the consular

burning the flower, you fetch the box from another apartment, and at the same time put in a corresponding flower, which will make the experiment still more surprising.

Legion,
Legillator.

consular state four legions were fitted up every year, and divided betwixt the two consuls; yet we meet with the number of 16 or 18, as the situation of affairs required. Augustus maintained a standing army of 23 or 25 legions; but this number in after times is seldom found. The different legions borrowed their names from the order in which they were raised; hence we read of *legio prima, secunda, tertia*: but as there might be many *prima, secunda, tertia*, &c. they were sur-named from the emperors, as *Augusta, Claudiana, Galbiana, Flavia, Ulpia, Trajana, Antoniana*, &c. or from the provinces which had been conquered by their means, as *Parthica, Scythica, Gallica, Arabica*, &c. or from the deities under whose protection the commanders had particularly placed themselves, as *Minervia, Apollinaris*, &c. or from the region where they were quartered, as *Cretensis, Cyrenaica, Britannica*, &c. or from particular accidents, as *adjutrix, martia, fulmi-vatrix, rapax, victrix*.

Each legion was divided into 10 cohorts, each cohort into 10 companies, and each company into two centuries. The chief commander of the legion was called *legatus*, i. e. lieutenant.

The standards borne by the legions were various; at first, the standard was a wolf, in honour of Romulus's nurse; afterwards a hog, which animal was usually sacrificed at the conclusion of a treaty, to indicate that war is undertaken with a view to peace; sometimes a minotaur, to remind the general of his duty of secrecy, of which the labyrinth was an emblem, and consequently the minotaur; a horse was also borne, also a boar; and Marius, we are told, was the first who changed all these for the eagle.

LEGISLATOR, a lawgiver, or person who establishes the polity and laws of a state. Such was Moses, among the Jews; Lycurgus, among the Lacedaemonians, &c. See *Mosaic Law*.

The first laws amongst the Athenians seem to have been those of Theseus; for what we can find earlier than this period is involved in fable. After Theseus came Draco the archon, whose laws were said, for their severity, to have been written with blood: by his laws every offence was punished with death; so that stealing an apple, and betraying their country, were treated as equal crimes. These laws were afterwards repealed by Solon, except such as related to murder: By way of distinction, Draco's laws were called *Θεσπροι*, and Solon's *Νομοι*. The laws of Solon were in a great measure suspended during the usurpation of Pisistratus; but, after the expulsion of his family, were revived with some additions by Cleisthenes. After this, the form of government was again changed, first by the four hundred, and afterwards by the thirty tyrants; but these storms being over, the ancient laws were again restored in the archonship of Euclides, and others established at the instances of Diocles, Aristophon, and, last of all, of Demetrius the Phalerian. This is a short sketch of the history of the Athenian legislation, before that state submitted to the Roman yoke. But many laws were enacted by the suffrages of the people on particular exigencies; the decrees of the senate continued to have the force of laws no longer than a year. If a new law was to be proposed to the assembly, it was necessary to write it upon a white tablet, and fix it up some days before the meeting, lest their judgement

should be caught by surprise. The laws were carefully revised every year; and if any of them, from a change of circumstances, were found unsuitable or prejudicial, they were repealed: This was called *παρρηγορία των νομων*, because the suffrages were given by holding up of hands. The first laws amongst the Grecians were unwritten and composed in verse, that the common people might with more ease commit them to memory. Solon penned his laws upon wooden tablets, called *Αξονες*; and some authors with great probability assert, that they were written in the manner called *Βαρσοφιδον*, from left to right, and from right again to left, in the same manner as oxen walk the furrows in plowing; thus,

ΕΚ ΔΙΟΣ ΑΡ
ΨΟΞΕΣΧ

It was against the law for any person to erase a decree; and certain persons, called *Γραμματεις*, were appointed to prevent any corruption; whose business it was also to transcribe the old and enter the new ones.

At Rome the people were in a great measure their own legislators; though Solon may be said, in some sense, to have been their legislator, as the decemviri, who were created for the making of laws, borrowed a great number from those of Solon. See *LEX*.

With us the legislative power is lodged in the king, lords, and commons assembled in parliament. See *LAW* and *PARLIAMENT*.

LEGITIMATION, an act whereby illegitimate children are rendered legitimate. See *BASTARD*.

LEGITIME, in *Scots Law*, that share of the moveable effects belonging to a husband and wife, which upon the husband's death falls to the children. See *LAW Index*.

LEGUMEN, or *POD*, in *Botany*; a species of seed-vessel which has two valves or external openings enclosing a number of seeds that are fastened along one suture only. In this last circumstance the seed-vessel in question differs from that termed by botanists *siliqua*, in which the enclosed seeds are fastened alternately to both the sutures or joinings of the pod.

The seed-vessel of all the pea bloom or butterfly-shaped flowers, the *diadelphia* of Linnaeus, is of this pod kind. Such, for instance, is the seed-vessel of the pea, vetch, lupine, and broom.

LEGUMINOUS, an appellation given to all plants whose fruit is a legumen.

LEIBNITZ, GODFREY WILLIAM DE, an eminent mathematician and philosopher, was born at Leipzig in Saxony in 1646. At the age of 15 years, he applied himself to mathematics at Leipzig and Jena; and in 1663, maintained a thesis *de Principiis Individuationis*. The year following he was admitted master of arts. He read with great attention the Greek philosophers; and endeavoured to reconcile Plato with Aristotle, as he afterwards did Aristotle with Des Cartes. But the study of the law was his principal view; in which faculty he was admitted bachelor in 1665. The year following he would have taken the degree of doctor; but was refused it on pretence that he was too young, though in reality because he had raised himself several enemies by rejecting the principles of Aristotle and the schoolmen. Upon this he went to Altorf, where he maintained a thesis *de Casibus Perplexis*, with such ap-
plause,

Legitima-
tion
||
Leibnit z

Leibniz, *plausé*, that he had the degree of doctor conferred on him. He might have settled to great advantage at Paris: but as it would have been necessary to have embraced the Roman Catholic religion, he refused all offers. In 1673, he went to England; where he became acquainted with Mr O'Denburch, secretary of the Royal Society, and Mr John Collins, fellow of that society. In 1676, he returned to England, and thence went into Holland, in order to proceed to Hanover, where he propos'd to settle. Upon his arrival there, he applied himself to enrich the duke's library with the best books of all kinds. The duke dying in 1679, his successor Ernest Augustus, then bishop of Osnaburgh, showed our author the same favour as his predecessor had done, and ordered him to write the history of the house of Brunswick. He undertook it, and travelled over Germany and Italy in order to collect materials. The elector of Brandenburg, afterwards king of Prussia, founded an academy at Berlin by his advice; and he was appointed perpetual president, though his affairs would not permit him to reside constantly at Berlin. He projected an academy of the same kind at Dresden; and this design would have been executed, if it had not been prevented by the confusions in Poland. He was engaged likewise in a scheme for an universal language. His writings had long before made him famous over all Europe. Beside the office of privy counsellor of justice, which the elector of Hanover had given him, the emperor appointed him in 1711 aulic counsellor; and the czar made him privy counsellor of justice, with a pension of 1000 ducats. He undertook at the same time the establishment of an academy of science at Vienna; but the plague prevented the execution of it. However, the emperor, as a mark of his favour, settled a pension on him of 2000 florins, and promised him another of 4000 if he would come and reside at Vienna. He would have complied with this offer, but he was prevented by death in 1716. His memory was so strong, that in order to fix any thing in it, he had no more to do but to write it once; and he could even in his old age repeat Virgil exactly. He professed the Lutheran religion, but never went to sermon; and upon his deathbed, his coachman, who was his favourite servant, desiring him to send for a minister, he refused, saying, *he had no need of one*. Mr Locke and Mr Molyneux plainly seem to think that he was not so great a man as he had the reputation of being. Foreigners ascribed to him the honour of an invention, of which, it is said, he received the first hints from Sir Isaac Newton's letters, who had discovered the method of fluxions in 1664 and 1665. But it would be tedious to give a detail of the dispute concerning the right to that invention. See FLUXIONS.

LEIBNITZIAN PHILOSOPHY, or the philosophy of Leibnitz, is a system of philosophy formed and published by its author in the last century, partly in emendation of the Cartesian, and partly in opposition to the Newtonian. The basis of Mr Leibnitz's philosophy was that of Des Cartes; for he retained the Cartesian subtle matter, with the universal plenitude and vortices; and represented the universe as a machine that should proceed for ever by the laws of mechanism, in the most perfect state, by an absolute inviolable necessity, though in some things he differs from Des Car-

tes. After Sir Isaac Newton's philosophy was published in 1687, he printed an essay on the celestial motions, *Act. Erud.* 1689, where he admits of the circulation of the ether with Des Cartes, and of gravity with Sir Isaac Newton; though he has not reconciled these principles, nor shown how gravity arose from the impulse of this ether, nor how to account for the planetary revolutions, and the laws of the planetary motions in their respective orbits. That which he calls the *harmonical circulation*, is the angular velocity of any one planet, which decreases from the perihelium to the aphelium in the same proportion as its distance from the sun increases; but this law does not apply to the motions of the different planets compared together: because the velocities of the planets, at their mean distances, decrease in the same proportion as the square roots of the numbers expressing those distances. Besides, his system is defective, as it does not reconcile the circulation of the ether with the free motions of the comets in all directions, or with the obliquity of the planes of the planetary orbits; nor resolve other objections to which the hypothesis of the plenum and vortices is liable. Soon after the period just mentioned, the dispute commenced concerning the invention of the method of fluxions, which led Mr Leibnitz to take a very decided part in opposition to the philosophy of Sir Isaac Newton. From the wisdom and goodness of the Deity, and his principle of a sufficient reason, he concluded that the universe was a perfect work, or the best that could possibly have been made; and that other things, which were incommodious and evil, were permitted as necessary consequences of what was best: the material system, considered as a perfect machine, can never fall into disorder, or require to be set right; and to suppose that God interposes in it, is to lessen the skill of the Author, and the perfection of his work. He expressly charges an impious tendency on the philosophy of Sir Isaac Newton, because he asserts, that the fabric of the universe and course of nature could not continue for ever in its present state, but would require, in process of time, to be re-established or renewed by the hand of its Former. The perfection of the universe, by reason of which it is capable of continuing for ever by mechanical laws in its present state, led Mr Leibnitz to distinguish between the quantity of motion and the force of bodies; and, whilst he owns, in opposition to Des Cartes, that the former varies, to maintain that the quantity of force is for ever the same in the universe, and to measure the forces of bodies by the squares of their velocities.

This system also requires the utter exclusion of atoms, or of any perfectly hard and inflexible bodies. The advocates of it allege, that according to the law of continuity, as they call a law of nature invented for the sake of the theory, all changes in nature are produced by insensible and infinitely small degrees; so that no body can, in any case, pass from motion to rest, or from rest to motion, without passing through all possible intermediate degrees of motion: whence they conclude, that atoms or perfectly hard bodies are impossible: because if two of them should meet with equal motions, in contrary directions, they would necessarily stop at once, in violation of the law of continuity.

Mr Leibnitz proposes two principles as the foundation of all our knowledge; the first, that it is impos-

sible

Leibnitzian Philosophy. sible for a thing to be and not to be at the same time, which, he says, is the foundation of speculative truth: the other is, that nothing is without a sufficient reason why it should be so rather than otherwise; and by this principle, according to him, we make a transition from abstracted truths to natural philosophy. Hence he concludes, that the mind is naturally determined, in its volitions and elections, by the greatest apparent good, and that it is impossible to make a choice between things perfectly like, which he calls *indiscernibles*; from whence he infers, that two things perfectly like could not have been produced even by the Deity: and he rejects a vacuum, partly because the parts of it must be supposed perfectly like to each other. For the same reason he also rejects atoms, and all similar particles of matter, to each of which, though divisible *in infinitum*, he ascribes a *monad* (Act. Lipsiæ 1698, p. 435.) or active kind of principle, endued, as he says, with perception and appetite. The essence of substance he places in action or activity, or, as he expresses it, in something that is between acting and the faculty of acting. He asserts absolute rest to be impossible; and holds motion, or a sort of *nisus*, to be essential to all material substances. Each monad he describes as representative of the whole universe from its point of sight; and after all, in one of his letters he tells us, that matter is not a substance, but a *substantiatum*, or *phenomené bien fondée*. He frequently urges the comparison between the effects of opposite motives on the mind, and of weights placed in the scales of a balance, or of powers acting upon the same body with contrary directions. His learned antagonist Dr Clarke denies that there is a similitude between a balance moved by weights, and a mind acting upon the view of certain motives; because the one is entirely passive, and the other not only is acted upon, but acts also. The mind, he owns, is purely passive in receiving the impression of the motive, which is only a perception, and is not to be confounded with the power of acting after, or in consequence of, that perception. The difference between a man and a machine does not consist only in sensation and intelligence, but in this power of acting also. The balance, for want of this power, cannot move at all when the weights are equal; but a free agent, he says, when there appear two perfectly alike reasonable ways of acting, has still within itself a power of choosing; and it may have strong and very good reasons not to forbear.

The translator of Mosheim's Ecclesiastical History observes, that the progress of Arminianism has declined in Germany and several parts of Switzerland, in consequence of the influence of the Leibnitzian and Wolfian philosophy. Leibnitz and Wolf, by attacking that liberty of indifference, which is supposed to imply the power of acting not only without, but against, motives, struck, he says, at the very foundation of the Arminian system. He adds, that the greatest possible perfection of the universe, considered as the ultimate end of creating goodness, removes from the doctrine of predestination those arbitrary procedures and narrow views with which the Calvinists are supposed to have loaded it, and gives it a new, a more pleasing, and a more philosophical aspect. As the Leibnitzians laid down this great end as the supreme object of God's universal dominion, and the hope to which all his dis-

penations are directed; so they concluded, that if this end was proposed, it must be accomplished. Hence the doctrine of necessity, to fulfil the purposes of a predestination founded in wisdom and goodness; a necessity, physical and mechanical, in the motions of material and inanimate things, but a necessity moral and spiritual in the voluntary determinations of intelligent beings, in consequence of propellent motives, which produce their effects with certainty, though these effects be contingent, and by no means the offspring of an absolute and essentially immutable fatality. These principles, says the same writer, are evidently applicable to the main doctrines of Calvinism; by them predestination is confirmed, though modified with respect to its reasons and its end; by them irresistible grace (irresistible in a moral sense) is maintained upon the hypothesis of propellent motives and a moral necessity: the perseverance of the saints is also explicable upon the same system, by a series of moral causes producing a series of moral effects.

LEICESTER, the capital of a county of the same name in England, upon the river Leire, now called *Soure*. From its situation on the Fosse way, and the many coins and antiquities discovered here, it seems probable that it was a place of some note in the time of the Romans. In the time of the Saxons it was a bishop's see, and afterwards so repaired and fortified by Edeldida, that it became, according to Matthew Paris, a most wealthy place, having 32 parish churches; but in Henry the Second's reign it was in a manner quite ruined, for joining in rebellion against him with Robert earl of Leicester. In the reign of Edward III. however, it began to recover by the favour of his son Henry Plantagenet, duke and earl of Lancaster, who founded and endowed a collegiate church and hospital here. It is a borough and corporation, governed by a mayor, recorder, steward, bailiff, 24 aldermen, 48 common council men, a solicitor, a town clerk, and two chamberlains. It had its first charter from King John. The freemen are exempt from paying toll in all the fairs and markets of England. It has three hospitals; that mentioned above, built by Henry Plantagenet duke of Lancaster, and capable of supporting 100 aged people decently; another, erected and endowed in the reign of Henry VIII. for 12 poor lazzars; and another for six poor widows. The castle was a prodigious large building, where the duke of Lancaster kept his court. The hall and kitchen still remain entire, of which the former is very spacious and lofty; and in the tower over one of the gateways is kept the magazine for the county militia. There was a famous monastery here, anciently called from its situation in the meadows, *St Mary de Pratis* or *Pres*. In these meadows is now the course for the horse race. It is said that Richard III. who was killed at the battle of Bosworth, lies interred in St Margaret's church. The chief business of Leicester is the stocking trade, which hath produced in general to the amount of 60,000*l.* a-year. In a parliament held here in the reign of Henry V. the first law for the burning of heretics was made, levelled against the followers of Wickliffe, who was rector of Lutterworth in this county, and where his pulpit is said still to remain. The town suffered greatly in the civil wars, by two sieges upon the back of one another. It has given

Leicester.

Leicester-
shire
||
Leighlin.

the title of *earl* to several noble families. The present earl was created in 1784, and is the marquis of Townshend's son. Its market on Saturday is one of the greatest in England for provisions, especially for corn and cattle; and it has four fairs in the year.

LEICESTERSHIRE, an inland county of England, in form almost circular. It has Nottinghamshire and Derbyshire to the north; Rutlandshire and Lincolnshire to the east; Warwickshire on the west, from which it is parted by the Roman military way called *Watling street*; and by Northamptonshire on the south; and is about 170 miles in circumference. As it lies at a great distance from the sea, and is free from bogs and marshes, the air is sweet and wholesome. It is a champaign country in general, and abundantly fertile in corn and grass, being watered by several rivers, as the Soure, or Sare, which passes through the middle of it, and abounds in excellent salmon and other fish; the Wreke, Trent, Eye, Sense, Auker, and Aven. These rivers being mostly navigable, greatly facilitate the trade of the county. In some parts there is a great scarcity of fuel, both wood and coal; but in the more hilly parts there is plenty of both, together with great flocks of sheep. Besides wheat, barley, oats, and pease, it produces the best beans in England. They grow so tall and luxuriant in some places, particularly about Barton in the Beans, that they look, towards the harvest time, like a forest; and the inhabitants eat them not only when they are green as in other places, but all the year round; for which reason their neighbours nickname them *bean bellies*. They have plenty of very good wool, of which they not only make great quantities of stockings, but send a great quantity unmanufactured into other parts of England. They make great profit of their corn and pulse; and likewise breed great numbers of coach and dray horses, most of the gentlemen being graziers; and it is not uncommon to rent grass farms from 500l. to 2000l. a-year. It is in the midland circuit, and diocese of Lincoln: and sends four members to parliament, two for Leicester, and two for the county.

LEIGH, SIR EDWARD, a very learned Englishman, was born at Shawel in Leicestershire, and educated at Magdalen hall, Oxford. He was a member of the long parliament, and one of the members of the house of commons who were appointed to sit in the assembly of divines. He was afterwards colonel of a regiment for the parliament; but in 1648 was numbered among the Presbyterians who were turned out, and in December he was imprisoned. From this period to the Restoration he employed himself in writing a considerable number of learned and valuable books, which showed profound learning, a knowledge of the languages, and much critical sagacity; and of which a list is given by Anthony Wood. Sir Edward died at his house called Rushall Hall, in Staffordshire, June 2. 1671; and was buried in the chancel of Rushall church.

LEIGHLIN, a town of Ireland, situated in the county of Carlow, and province of Leinster; about 43 miles from Dublin, near the river Barrow. It is a borough, and formerly returned two members to parliament; patronage in the bishop of the diocese, this being a bishopric united to Ferns. At the east end of the church of Old Leighlin is a famous well covered with

great ash trees, and dedicated to St Laffarian. This place was formerly a city, though now a very mean village, and the cathedral has been kept in good repair. It was a *sole* bishopric, founded in 632, and joined to Ferns in 1600. It is reported, that Gurmundus a Danish prince was buried in this church. The last bishop of Leighlin before its union with Ferns, was the right reverend Robert Grave, who coming by sea to be installed, suffered shipwreck in the harbour of Dublin, and perished in the waves. This cathedral was burnt to the ground, it is said, by lightning; and rebuilt, A. D. 1232, then dedicated to St Laffarian or Lazarinus, before mentioned; since the sees were joined, it is made use of as a parish church. Leighlin bridge is situated about two miles from this village; it was destroyed by the Irish in 1577. Here are the remains of a castle and of an old abbey. This is a post town, and has fairs in May, September, and October.

LEIGHTON, ROBERT, archbishop of Glasgow. During Cromwell's usurpation, he was minister of a church near Edinburgh, and distinguished himself by his charity, and his aversion to religious and political disputes. The ministers were then called over yearly in the synod, and were commonly asked, Whether they had preached to the times? "For God's sake (answered Leighton, when all my brethren preach to the times, suffer me to preach about eternity." His moderation, however, giving offence, he retired to a life of privacy. But soon after, he was called by the unanimous voice of the magistrates, to preside over the college of Edinburgh; where, during ten years, he displayed all the talents of a prudent, wise, and learned governor. Soon after the Restoration, when the ill-judged affair of introducing Episcopacy into Scotland was resolved on, Leighton was consecrated bishop of Dunblane, and immediately gave an instance of his moderation: for when Sharpe and the other bishops intended to enter Edinburgh in a pompous manner, Leighton remonstrated against it; but finding that what he said had no weight, he left them, and went to Edinburgh alone. Leighton, in his own diocese, set such a remarkable example of moderation, that he was revered even by the most rigid of the opposite party. He went about, preaching without any appearance of pomp; gave all he had to the poor; and removed none of the ministers, however exceptionable he might think their political principles. But finding that none of the other bishops would be induced to join, as he thought, properly in the work, he went to the king, and resigned his bishopric, telling him he would not have a hand in such oppressive measures. Soon after, the king and council, partly induced by this good bishop's remonstrances, and partly by their own observations, resolved to carry on the cause of Episcopacy in Scotland on a different plan; and with this view, Leighton was persuaded to accept of the archbishopric of Glasgow, on which he made one effort more; but finding it not in his power to stem the violence of the times, he resigned his archbishopric, and retired into Sussex, where he devoted himself to acts of piety. He died in the year 1684. He was of a most amiable disposition, strict in his life, polite, cheerful, engaging in his manners, and profoundly learned. He left many sermons and useful tracts, which are greatly esteemed.

LEINSTER, the eastern province of Ireland, bound-

Leighton
Leinster.

Leipsic,
Leith.

ed by Ulster on the north; St George's, or the Irish channel, on the east and south; and by the provinces of Connaught and Munster on the west. The capital city of this province and of the kingdom is Dublin. It contains 12 counties, viz. Carlow, Dublin, Kildare, Kilkenny, King's county, Longford, Louth, Meath, Queen's county, West Meath, Wexford, and Wicklow. It is the most level and best cultivated province in the kingdom; containing 2,642,958 Irish plantation acres, 858 parishes, 99 baronies, and 53 boroughs; it is about 124 miles long and 74 broad, and extends from 51° 45' to 55° 45' north latitude. Dermond king of Leinster marrying his daughter Eva to Strongbow earl of Pembroke, on his decease made him his universal heir; whereby the earl inherited the province of Leinster, and was afterwards enfeoffed of it by Henry II. He died in 1176, and left an only daughter Isabel, espoused to William Marshal earl of Pembroke; by her he had five sons, who succeeded to his great estates in Leinster. This province gives title of duke to the ancient and noble family of Fitzgerald. In the early ages, this district was almost one continued forest, and was principally the seat of the Kinfeaghans.

LEIPSIC, a large, strong, and populous town of Misnia in Germany, with a castle, and a famous university. It is neat, and regularly built, and the streets are lighted in the night; it carries on a great trade, and has a right to stop and sell the merchandises designed to pass through it, and the country for 75 miles round has the same privilege. There are three great fairs every year; at the beginning of the year, Easter and Michaelmas, which last 15 days each. There are six handsome colleges belonging to the university, besides the private colleges. The townhouse makes an indifferent appearance, but the exchange is a fine structure. The town was taken by the king of Prussia in the late war, but given up by the peace in 1763. It is seated in a plain between the rivers Saale and Mulde, near the confluence of the Playffe, the Elster, and the Barde. E. Long. 12. 55. N. Lat. 51. 19.

LEITH, (anciently called *Inverleith*), the port of Edinburgh, is seated on the banks of the Forth, about two miles from the capital. It is built on both sides of the harbour; by which it is divided into two parts, called *North* and *South Leith*. The communication between these was by a stone bridge of three arches founded by Robert Ballentyne abbot of Holyroodhouse in 1493, but some time ago pulled down. The harbour is formed by the conflux of the rivulet called the *Water of Leith* with the frith of Forth. The depth of water, at neap tides, is about nine feet; but in high spring tides, it is about 16 feet. In the beginning of the 18th century, the town council of Edinburgh improved the harbour at an enormous expence, by extending a stone pier a considerable way into the sea. In 1777, they erected an additional stone quay towards its west side. Upwards of 100 ships could then lie conveniently in this port: but it can now admit of a much greater number, in consequence of having lately undergone great improvements. In order to enlarge it, the old bridge was pulled down, and an elegant drawbridge erected a little to the eastward of the former site. It is accommodated with wet and dry docks, and other conveniences for ship-building, which is there carried on to

some extent, as vessels come to Leith to be repaired from all parts of Scotland. A new basin was completed and opened in 1805, which affords a safe and convenient station for trading vessels. The road of Leith affords good anchorage for ships of the greatest size.

About the close of the American war, when the people were alarmed by the appearance of Paul Jones in the frith with no more than three armed vessels, threatening to destroy all the ships in the roads and harbour, a battery was erected to the westward of the citadel, mounting nine guns. A party of artillery with a considerable park is constantly stationed at the battery, which is kept in excellent repair.

The harbour of Leith was granted to the community of Edinburgh by King Robert in 1329; but the banks of the harbour belonged to Logan of Restalrig, a turbulent and ambitious baron, from whom the citizens were under the necessity of purchasing the bank or waste piece of ground between the houles and the rivulet above mentioned, for the purposes of wharfs, as well as for erecting shops and granaries, neither of which they could do before. As the situation of Leith, however, is much more convenient for trade than that of Edinburgh, which is two miles distant from the harbour, the inhabitants of the metropolis have fallen upon various methods of restraining the trade of Leith. They first purchased, from Logan of Restalrig, an exclusive privilege of carrying on every species of traffic in the town of Leith, and of keeping warehouses and inns for the entertainment of strangers in that place; and in 1483, the town council prohibited, under severe penalties, the citizens of Edinburgh from taking into partnership any inhabitant of Leith. To free themselves from this oppression, the people of Leith purchased the superiority of their town from Logan of Restalrig for 3000l. Scots, and it was erected into a burgh of barony by the queen regent, Mary of Lorraine, who promised to erect it into a royal borough. She died, however, before this was accomplished; and upon her death, Francis and Mary, in violation of the private rights of the people of Leith, resold the superiority to the town of Edinburgh, to whom it has since been confirmed by grants from successive sovereigns.

On the breaking out of the disturbances at the Reformation, the queen regent caused the whole town to be fortified, that the French troops might have a more ready inlet into the kingdom. It was accordingly surrounded with a wall, having eight bastions: but this wall went no farther than the street now called *Bernard's nook*, because at that time the sea came up the length of that street; and even as late as 1623, a house situated exactly where the weigh-house is at present, is described as bounded on the east by the "sand of the sea-shore." All that space, therefore, on which the row of houses neared the harbour of Leith now stands, has been gained since that time from the sea.

In the time of Charles I. a fortification was erected at Leith by the Covenanters. Cromwell built a strong fort at the place still called the *citadel* in North Leith; but it was pulled down on the restoration of Charles II. by order of government. A gate with portcullises are the present remains of that fortification.—A palace

Leith. lace also appears to have formerly stood here, situated at the north-east boundaries of the former town, on the spot where the present weigh-house stands. It was destroyed by the English in the time of Henry VIII. The remains of this building, called the *king's work*, with a garden, and a piece of waste land that surrounded it, was erected into a barony by James VI. and bestowed upon Bernard Lindsay of Lochill, groom of the chamber to that prince. He is said to have fully repaired, and appropriated it to the recreations of the court; but it soon fell from its dignity, and became subservient to much more ignoble purposes. The tennis court was converted into a weigh-house; and the street which bounds it still bears the name of the founder, from whence it is called *Bernard's nook*.

As Leith lay within the parish of Restalrig, the church of Restalrig was of consequence the place of worship for the inhabitants of Leith; but in 1650 the Assembly ordered that church to be pulled down as a monument of idolatry, so that Leith wanted a parish church for upwards of 50 years. During that period they resorted for worship to a large and beautiful chapel already built, and dedicated to St Mary, which is now called *South Leith Church*; and in 1609 this chapel was by authority of parliament declared to be the parish church of the district: so that Restalrig is now in the parish of South Leith, as the latter was formerly in that of Restalrig. In 1772, a chapel of ease was erected by the inhabitants, as the parish church was insufficient to contain the number of hearers. There are also an Episcopal and several dissenting congregations in Leith. North Leith is a parish by itself, and the church which is proposed (1807) to be rebuilt, is situated at what was the north end of the old bridge.

Though a very great trade is carried on between Leith and many foreign ports, yet the articles of export and import fluctuate so much, that it would be useless to enter into any details either as to species or quantity. In general, the imports from France, Spain, and Portugal, are wines, brandy, and fruits; from the West Indies and America, rice, indigo, rum, sugar, and logwood. But the principal foreign trade of Leith is by the eastern seas, for the navigation of which it is most happily situated. To Germany, Holland, and the Baltic, it exports lead, glass ware, linen and woollen stuffs, and a variety of other goods, and from thence it imports immense quantities of timber, oak bark, hides, linen rags, pearl ashes, flax, hemp, tar, and many other articles. The Baltic trade has long been carried on to a great extent, owing no doubt to the vast increase of new buildings in Edinburgh and its environs. The coasting trade is a principal branch for the shipping at Leith, including those which belong to other ports on the Forth, which are said to make about one-fourth of the tonnage of the Leith vessels. The ships employed in the London trade are in general of a large size, elegantly constructed, well manned, and furnished with excellent accommodations for passengers. The largest ships in this port, however, are those employed in the Greenland fishery.

The shipping at Leith renders the demand for ropes, sail cloth, and cordage, very considerable. Different companies who carry on these manufactures, besides private persons who deal less considerably. The first

of those companies was established in the beginning of the 18th century. This has proved a prosperous and lucrative concern.

In the middle of the 17th century, a manufactory of green glass was established at the citadel of Leith. Chopin bottles were sold at 4s. 6d. per dozen, and other bottles in proportion. Soon afterwards this article was manufactured also in North Leith; and in 1707, chopin bottles were sold at 2s. 6d. per dozen, and so on proportionably. That house being burnt down in 1746, a new house was built the following year on South Leith sands, and an additional one in 1764. Two companies are now (1807) engaged in the glass manufacture; the one for common bottles, and the other for window glass and crystal ware of all sorts.

Manufactures of soft soap and candles were erected by St Clair of Roslin and some merchants; the former in 1750, and the latter in 1770: a manufacture of hard soap was also established in 1770. Besides these, there are a considerable manufacture for making cards with which wool is combed, a great carpet factory, and several iron forges. There was also a sugar house: but it has been given up, as has likewise Mr St Clair's soap work.

There is beside a branch of the British Linen Company, a banking house in Leith, called the *Leith Banking Company*, who issue notes and carry on business to a considerable extent. An elegant building for the accommodation of this company is now (1807) erecting.

The inhabitants of Leith were divided into four classes; and these erected into corporations by the queen dowager, Mary of Lorraine. These were mariners, maltmen, trades, and traffickers. The first of these consisted of shipmasters and sailors; the second, of malt-makers and brewers; the third, of coopers, bakers, smiths, wrights, &c.; and the fourth, of merchants and shopkeepers. Of these corporations the mariners are the most considerable. They obtained from Mary of Lorraine a gift, afterwards ratified by William and Mary, of one penny duty on the ton of goods in the harbour of Leith, for the support of their poor. This duty, which not many years ago did not amount to 40l. a-year, now rises from 70l. to 120l. as trade flourishes. For the same purpose the shipmasters also pay 6d. a pound out of their own wages annually; and the like sum they give upon the wages of their sailors. From these and other donations, this corporation is enabled to pay from 600l. to 700l. a-year to their poor. Opposite to South Leith church there is a large house belonging to them, called the *Trinity Hospital*, because originally consecrated to the Holy Trinity. In this house some of their poor used formerly to be maintained, but now they are all out-pensioners. Besides other apartments, this hospital contains a large handsome hall for the meetings of the corporation. Adjoining to the school house there is another hospital, called *King James's Hospital*; and bears upon its front the cypher and arms of that prince. Here some poor women belonging to the other corporations are maintained.

As the town of Leith was very ill supplied with water, and the streets were neither properly cleaned nor lighted, an act for remedying these defects was passed in the year 1771, appointing certain persons from among

Leitrim
||
Leland.

mong the magistrates of Edinburgh, lords of session, inhabitants of Edinburgh and Leith, and members of the corporations of Leith, *commissioners of police*; empowering them to put this act in execution; and, for that purpose, to levy a sum not exceeding 6d. in the pound upon the valued rent of Leith. The great change which has since taken place on the streets of Leith shows the good effect of this act, and that it has both been judiciously prepared, and attentively executed. Leith however has never been well supplied with water; that brought in pipes from *Lochend* in the eastern part of the parish is not of a good quality, for it is not derived from springs.

Leith was computed to contain, in 1801, above thirteen thousand inhabitants. The government of the town is vested in a magistrate sent from Edinburgh, having admiral's power; and in two residing bailies elected by the town council.

LEITRIM, a county of Ireland, situated in the province of Connaught, is bounded on the north by the bay of Donnegal and part of Fermanagh, on the south and west by Sligo and Roscommon, and on the east by Fermanagh and Cavan. It is a fruitful county; and, though mountainous, produces great herds of black cattle; but has few places of note. It contains 206,830 Irish plantation acres, 21 parishes, 5 baronies, and 2 boroughs, and formerly sent six members to parliament; and is about 42 miles long; and 17 broad.

LEITRIM, the shire town of the county of that name, is pleasantly situated on the banks of the river Shannon, about 80 miles from Dublin; and appears to have been formerly a place of some note. St Mac Liegus, son of Cernac, was bishop here; and his festival is observed on the 8th of February.

LEIXLIP, a post and fair town of Ireland pleasantly situated in the county of Kildare and province of Leinster, about 8 miles from Dublin. Near it are the ruins of the church and castle of Confy. The castle of Leixlip is beautifully seated on the banks of the river Liffey; it is a fine edifice with large and pleasant gardens, at one side of which is a fine waterfall called the *Salmon leap*, there being plenty of that species of fish hereabouts. A mile from this is Castletown, the magnificent seat of Mr Conolly.

LELAND, JOHN, a celebrated English antiquary, was born in London about the year 1507. Having lost his parents when a child, he had the good fortune to find a friend and patron in one Mr Thomas Miles, who placed him in St Paul's school, of which the grammarian Lilye was master. From that school he was sent to Christ's college, Cambridge; whence, after some years residence, he removed to All Souls, Oxford. From Oxford he went to Paris, chiefly with a design to study the Greek language, which at that time was but little understood in this kingdom. On his return to England he took orders, and was soon appointed chaplain to King Henry VIII. who also gave him the rectory of Poppeling, in the marshes of Calais, appointed him his librarian, and in 1533 granted to him, by commission under the great seal, the office of king's antiquary; an office never borne by any other person before or since. By this commission he was empowered to search for ancient writings in all the libraries of colleges, abbey priories, &c. in his majesty's dominions. We are told by his

Leland.

last biographer, that he renounced Popery soon after his return to England; but he quotes no authority. Be this as it may, in 1536, he obtained a dispensation to keep a curate at Poppeling, and set out on his journey in search of antiquities. In this employment he spent six years, during which time he visited every part of England where monuments of antiquity were to be expected. After his return, in the year 1542, he was presented by the king to the rich rectory of Haseley in Oxfordshire; and in the following year he gave him a prebend of King's college, now Christ's church, in Oxford, besides that of East and West Knowle, in the cathedral of Salisbury. Being thus amply provided for, he retired to a house of his own in the parish of St Michael le Querne in London, where he spent six years more in digesting the materials which he had collected. King Henry VIII. died in 1547; and in a short time after, poor Leland lost his senses. He was at first seized with a deep melancholy, which was succeeded by a total deprivation of his reason. In this dreadful state he continued till the beginning of the year 1552, when he was happily released by death. He was buried in the church of St Michael le Querne, which was destroyed by the fire in 1666. Mr Leland is remembered as a man of great learning, an universal linguist, an excellent Latin poet, and a most indefatigable and skilful antiquary. On his death, King Edward VI. gave all his papers to Sir John Checke, his tutor and Latin secretary of state. The king dying, and Sir John being obliged to leave the kingdom, he gave four folio volumes of Leland's collections to Humphrey Purefoy, Esq; which in 1612, were by his son given to William Burton, author of the history of Leicestershire. This gentleman, also became possessed of the Itinerary in 8 vols folio, which, in 1632, he deposited in the Bodleian library. Many other of Leland's manuscripts, after the death of Sir John Checke, fell into the hands of Lord Paget, Sir William Cecil, and others, which at last fortunately came into the possession of Sir John Cotton. These manuscripts were of great use to all our subsequent antiquarians, particularly Camden, Sir William Dugdale, Stowe, Lambard, Dr Bateley, Ant. Wood, &c. His Itinerary throughout most parts of England and Wales, was published by Mr Hearne, 9 vols. 8vo, in 1710-11; as was also his *Collectanea de rebus Britannicis*, 6 vols 8vo, in 1715.

LELAND, *John*, a distinguished writer in defence of Christianity, was born at Wigan in Lancashire in 1691, of eminently pious and virtuous parents. They took the earliest care to season his mind with proper instructions; but, in his sixth year, the small pox deprived him of his understanding and memory, and expunged all his former ideas. He continued in this deplorable state near a twelvemonth, when his faculties seemed to spring up anew; and though he did not retain the least traces of any impressions made on him before the distemper, yet he now discovered a quick apprehension and strong memory. In a few years after, his parents settled in Dublin, which situation gave him an easy introduction to learning and the sciences. When he was properly qualified by years and study, he was called to be pastor to a congregation of Protestant dissenters in that city. He was an able and acceptable preacher, but his labours were not confined to the pul-

Leleges
||
Lely.

pit. The many attacks made on Christianity, and by some writers of no contemptible abilities, engaged him to consider the subject with the exactest care, and the most faithful examination. Upon the most deliberate inquiry, the truth and divine original, as well as the excellence and importance of Christianity, appearing to him with great lustre, he published answers to several authors who successively appeared in that cause. He was indeed a master in this controversy; and his history of it, styled "A View of the Deistical Writers that have appeared in England in the last and present Century, &c. is very greatly and deservedly esteemed. In the decline of life he published another laborious work, entitled, "The Advantage and Necessity of the Christian Revelation, shown from the State of Religion in the ancient Heathen World, especially with respect to the Knowledge and Worship of the One true God; a Rule of moral Duty, and a State of future Rewards and Punishments: to which is prefixed, a long and preliminary Discourse on Natural and Revealed Religion," 2 vols 4to. This noble and extensive subject, the several parts of which have been slightly and occasionally handled by other writers, Leland has treated at large with the greatest care, accuracy, and candour. And, in his, "View of the Deistical Writers," his cool and dispassionate manner of treating their arguments, and his solid confutation of them, have contributed more to depress the cause of atheism and infidelity, than the angry zeal of warm disputants. But not only his learning and abilities, but also his amiable temper, great modesty, and exemplary life, recommended his memory to general esteem and affection. He died in 1766.

LELEGEIS, the ancient name of Miletus, from the Leleges, the first inhabitants of it.

LELEGES, anciently a people of Asia, of Greek original: the name denoting "a collection of people:" they first occupied the islands; then passing over to the continent, they settled partly in Mysia on the Sinus Adramyttenus, and partly in that part of Ionia next Caria.—There were Leleges also of Laconia. These went to the Trojan war with Altes their king. Achilles plundered their country, and obliged them to retire to the neighbourhood of Halicarnassus, where they fixed their habitation.—The inhabitants of Laconia and of Megara also bore this name for some time, from Lex one of their kings.

LELEX, an Egyptian who came with a colony to Megara, where he reigned about 200 years before the Trojan war. His subjects were called from him *Leleger*.—Also the name of a Greek who was the first king of Laconia in Peloponnesus. His subjects were also called *Leleges*, and the country where he reigned *Lelegia*.

LELY, SIR PETER, an eminent painter, was born in Westphalia in the year 1617. He was placed as a disciple with Peter Grebber at Haerlem; and in 1641 was induced, by the encouragement Charles I. gave to the fine arts, to come to England. He became state-painter to Charles II. who knighted him; and being as complete a gentleman as a painter, that king took pleasure in conversing with him. He practised portrait painting, and succeeded so well that he was preferred before all his contemporaries. Hence he became perpetually involved in business; so that he was thereby prevented

from going into Italy to finish the course of his studies, which in his younger days he was very desirous of: however, he made himself amends, by getting the best drawings, prints, and paintings, of the most celebrated Italian masters. Among these were the better part of the Arundel Collection, which he had from that family, many whereof were sold after his death at prodigious rates, bearing upon them his usual mark of P. L.—The advantage he reaped from this collection, the best chosen of any one of his time, appears from that admirable style which he acquired by daily conversing with the works of those great masters. In his correct draught and beautiful colouring, but more especially in the graceful airs of his heads, and the pleasing variety of his postures, together with the gentle and loose management of the draperies, he excelled most of his predecessors. Yet the critics remark, that he preserved in almost all his female faces a drowsy sweetness of the eyes peculiar to himself; for which he is reckoned a mannerist. The hands of his portraits are remarkably fine and elegantly turned; and he frequently added landscapes in the back grounds of his pictures, in a style peculiar to himself, and better suited to his subject than most men could do. He excelled likewise in crayon painting. He was familiar with, and much respected by, persons of the greatest eminence in the kingdom. He became enamoured of a beautiful English lady, to whom he was some time after married; and he purchased an estate at Kew in the county of Surrey, to which he often retired in the latter part of his life. He died of an apoplexy in 1685 at London; and was buried at Covent Garden church, where there is a marble monument erected to his memory, with his bust, carved by Mr Gibbons, and a Latin epitaph, written, as is said, by Mr Flatman.

LEMBERG, a town of Poland, capital of Red Russia, seated in the palatinate of Lemburg, on the river Pelteu. It is pretty well fortified, and defended by two citadels, one of which is seated on an eminence without the town. The square, the churches, and the public buildings, are magnificent; and it is a large and rich trading place. It has a Roman Catholic archbishop, and an Armenian as well as a Russian bishop; but the Protestants are not tolerated. The city was reduced to the last extremity by the rebel Cossacs and Tartars, and was forced to redeem itself with a large sum of money. In 1672, it was besieged in vain by the Turks; but in 1704, was taken by storm by Char. XII. of Sweden. E. Long. 24. 46. N. Lat. 49. 51.

LEMERY, NICHOLAS, a celebrated chemist, born at Rouen in Normandy in 1645. After having made the tour of France, he, in 1672, commenced an acquaintance with M. Martyn apothecary to Monsieur the Prince; and performed several courses of chemistry in the laboratory of this chemist at the Hotel de Conde; which brought him to the knowledge and esteem of the prince. He provided himself at length with a laboratory of his own, and might have been made a doctor of physic: but he chose to continue an apothecary, from his attachment to chemistry, in which he opened public lectures; and his confluence of scholars was so great as scarcely to allow him room to perform his operations. The true principles of chemistry in his time were but ill understood; Lemery was the first who abolished the senseless jargon of barbarous terms, reduced

Leming
||
Lemnos.

reduced the science to clear and simple ideas, and promised nothing that he did not perform. In 1681, he was disturbed on account of his religion; and came to England, where he was well received by Charles II.: but affairs not promising him the same tranquillity, he returned to France, and sought for shelter under a doctor's degree; but the revocation of the edict of Nantz drove him into the Romish communion to avoid persecution. He then became associate chemist and pensionary in the Royal Academy of Sciences, and died in 1715. He wrote, *A course of chemistry*; *An universal pharmacopœia*; *An universal treatise of drugs*; and, a treatise on antimony.

LEMING, in *Zoology*. See MUS, MAMMALIA *Index*.

LEMMA, (of *λαμβάνω*, "I assume,") in *Mathematics*, denotes a previous proposition, laid down in order to clear the way for some following demonstration; and prefixed either to theorems, in order to render their demonstration less perplexed and intricate; or to problems, to make their resolution more easy and short. Thus, to prove a pyramid one third of a prism, or parallelepiped, of the same base and height with it, the demonstration whereof in the ordinary way is difficult and troublesome; this lemma may be premised, which is proved in the rules of progression, that the sum of the series of the squares, in numbers in arithmetical progression, beginning from 0, and going on 1, 4, 9, 16, 25, 36, &c. is always subtriple of the sum of as many terms, each equal to the greatest; or is always one-third of the greatest term multiplied by the number of terms. Thus, to find the inflection of a curve line, this lemma is first premised, that a tangent may be drawn to the given curve in a given point.

So in physics, to the demonstration of most propositions, such lemmata as these are necessary first to be allowed: that there is no penetration of dimensions; that all matter is divisible: and the like. As also in the theory of medicine, that where the blood circulates, there is life, &c.

LEMNA, DUCK-MEAT, a genus of plants belonging to the monœcia class; and in the natural method ranking under the 54th order, *Miscellaneæ*. See BOTANY *Index*.

LEMNIAN EARTH, *Terra Lemnia*, a medicinal, astringent sort of earth, of a fatty consistence and reddish colour; used in the same cases as BOLE. It has its name from the island of Lemnos, whence it is chiefly brought. Many form it into round cakes, and impress a seal upon it; whence it is also called *terra sigillata*. A sort is said to be imported from Senegal, which is not properly an earth, though so called, but composed of the dried pulp of the fruit of the BAOBAB.

LEMNIUS, LÆVINUS, a famous physician, born at Ziric Zee in Zealand, in 1505. He practised physic with applause; and after his wife's death being made priest, became canon of Ziric Zee, where he died in 1560. He left several works, the principal of which is entitled *De oculis naturæ miraculis*.

LEMNOS, in *Ancient Geography*, a noble island in the Ægean sea, near Thrace, called also *Dipolis*, from its consisting of two towns. The first inhabitants were the Pelasgi, or rather the Thracians, who were mur-

dered by their wives. After them came the children of the Lemnian widows by the Argonauts, whose descendants were at last expelled by the Pelasgi, about 1100 years before the Christian era. Lemnos is about 112 miles in circumference according to Pliny; who says, that it is often shadowed by Mount Athos, though at the distance of 87 miles. It has been called *Hippispile* from Queen Hippispile. It is famous for a certain kind of earth or chalk called *terra Lemnia*, or *terra sigillata*, from the seal or impression which it can bear, and which is used for consolidating wounds. As the inhabitants were blacksmiths, the poets have taken occasion to fix the forges of Vulcan in that island, and to consecrate the whole country to his divinity. Lemnos is also celebrated for a labyrinth, which, according to some traditions, surpassed those of Crete and Egypt. Some remains of it were still visible in the age of Pliny. The island of Lemnos was reduced under the power of Athens by Miltiades.

LEMON. See CITRUS, BOTANY *Index*.

LEMON Island, one of the Skelig illands so called; situated off the coast of the county of Kerry, in the province of Munster in Ireland. It is rather a round rock, always above water, and therefore no way dangerous to ships. An incredible number of gannets and other birds breed here; and it is remarkable that the gannet nestles nowhere on the southern coasts of Ireland but on this rock, though many of them are seen on all parts of our coast on the wing. There is another rock on the northern coast of Ireland remarkable for the same circumstance.

LEMONADE, a liquor prepared of water, sugar, and lemon or citron juice, which is very cooling and grateful.

LEMOVICES, a people of Aquitania, situated between the Bituriges Cubi to the north, the Arverni to the east, the Cadurci to the south, and the Pictones to the west. Now the *Limosin* and *La Marche*.

LEMUR, the MAUCAUCO, a genus of quadrupeds belonging to the order of primates. See MAMMALIA *Index*.

LEMURES, in antiquity, spirits or hobgoblins; restless ghosts of departed persons, who return to terrify and torment the living.

These are the same with *larvæ*, which the ancients imagined to wander round the world, to frighten good people, and plague the bad. For which reason at Rome they had *lemuria* or feasts instituted to appease the manes of the defunct. See LARES.

Apuleius explains the ancient notion of manes thus: the souls of men released from the bands of the body, and freed from performing their bodily functions, become a kind of demons or genii, formerly called *lemures*. Of these *lemures*, those that were kind to their families were called *laræ familiares*; but those who for their crimes, were condemned to wander continually, without meeting with any place of rest, and terrified good men, and hurt the bad, are vulgarly called *larvæ*.

An ancient commentator on Horace mentions, that the Romans wrote *lemures* for *remures*; which last word was formed from Remus, who was killed by his brother Romulus, and who returned to the earth to torment him.

Lemon
||
Lemures.

Lemuria
||
Lending-
Houses.

But Apuleius observes, that in the ancient Latin tongue *lemures* signifies the soul of a man separated from the body by death.

LEMURIA, or **LEMURALIA**, a feast solemnized at Rome on the 9th of May, to pacify the manes of the dead, or in honour of the lemures.—It was instituted by Remulus, to appease the ghost of his murdered brother Remus, which he thought was continually pursuing him to revenge the horrid crime.—The name Lemuria is therefore supposed to be a corruption of Remuria, i. e. the feast of Remus. Sacrifices continued for three nights, the temples were shut up, and marriages were prohibited during the solemnity. A variety of whimsical ceremonies were performed, magical words made use of, and the ghosts desired to withdraw, without endeavouring to hurt or afflict their friends above ground. The chief formalities were ablation, putting black beans into their mouths, and beating kettles and pans, to make the goblins keep their distance.

LENA, a great river of Siberia in Asia, which takes its rise in N. Lat. 50. 30. and E. Long. 124. 30. from Ferro. After traversing a large tract of country, it divides itself into five branches about Lat. 73°. Three of these run westward, and two eastward, by which it discharges itself into the Icy sea. Its three western mouths lie in 143° E. Long. from Ferro, but the eastern ones extend to 153. The current is everywhere slow, and its bed entirely free from rocks. The bottom is sandy, and the banks are in some places rocky and mountainous. Sixteen large rivers fall into the Lena during its course to the northern ocean.

LENÆA, a festival kept by the Greeks in honour of Bacchus, at which there was much feasting and Bacchanalian jollity, accompanied with poetical contentions, and the exhibition of tragedies. The poor goat was generally sacrificed on the occasion, and treated with various marks of cruelty and contempt, as being naturally fond of browsing on the vine shoots.

LENCICIA, a strong town of Poland, and capital of a palatinate of the same name, with a fort seated on a rock. The nobility of the province hold their diet here. It stands in a morass on the banks of the river Bura, in E. Long. 19. 25. N. Lat. 52. 12.

LENDING-HOUSES. That it should have once been conceived unlawful to exact interest for the loan of money will not appear surprising, when it is considered, that at an early period the occupations by which a man could support his family were neither so numerous nor productive as in modern times. As money, therefore, was at that time sought to remove immediate necessity, those who advanced it were influenced by benevolence and friendship. But on the extension of trade, arts, and manufactures, money lent produced much more than what was adequate to the borrower's daily support, and therefore the lender might reasonably expect from him some remuneration. To the lending of money upon interest, according to the earliest accounts we have, succeeded the practice of establishing funds for the relief of the needy, on condition that they could deposit any thing equal in value to double the sum borrowed, for which they were to pay no interest.

But as, on the one hand, the idea of exacting interest for the loan of money was odious to the members of the Popish church in general, and as, on the other,

Lending
Houses
Lentian

it appeared highly proper and even necessary, to pay interest for money to be employed in commerce, the pontiffs themselves at length allowed the lending-house to take a moderate interest; and in order not to alarm the prejudices of those to whom the measure was obnoxious, it was concealed under the name of being paid *pro indemnitate*,—the expression made use of in the papal bull.

It appears that lending-houses, which gave money on the receipt of pledges, at a certain interest, are by no means of recent date; for many of the houses of this nature, in Italy at least, were established in the 15th century, by Marcus Bononienfis, Michael à Carcano, Cherubinus Spoletanus, Antonius Verceilensis, Bernardinus Tomitano, and others.

The lending-house at Perugia, established by Barnabas Interamnenfis, was inspected by Bernardinus in 1485, who augmented its capital, and in the same year established one at Assisi, which was confirmed by Pope Innocent, and visited and improved by its founder in the year 1487. He likewise established one at Mantua after formidable opposition being made to the measure, procuring for it the sanction of the pope, as Wadding informs us. The same person also founded lending-houses at Florence, Parma, Chieti, and Piacenza, in doing which he was sometimes well received, while at others he frequently met with the most formidable opposition. A house of this kind was established at Padua in the year 1491, and another at Ravenna, which were approved of and confirmed by Pope Alexander VI.

Long after the above period, lending-houses were established at Rome and Naples, that of the former city having taken place in 1539, and that of the latter probably in the following year. A lending-house was established at Nuremberg in Germany about 1618, the inhabitants having obtained from Italy the regulations of different houses, in order to select the best. In France, England, and the Netherlands, lending-houses were first known under the denomination of *Lombards*. Similar institutions were formed at Brussels in 1619; at Antwerp in 1620, and at Ghent in 1622.

Although such houses must be allowed to be of considerable utility under certain circumstances, especially when the interest is not allowed to be exorbitant, yet they were always odious in France; but one was established at Paris in 1626, in the reign of Louis XIII. which the managers next year were obliged to abandon. The *mont de piété* at that city, which has sometimes had in possession 40 casks full of gold watches that were pledged, was established by royal authority in the year 1777, as we learn from the *Tableau de Paris*, published at Hamburg in 1781.—*Beckman's Hist. of Inventions*.

LENFANT, JAMES, a learned French writer, was born in 1661. After studying at Saumur, he went to Heidelberg, where he received imposition of hands for the ministry in 1684. He discharged the functions of this character with great reputation there, as chaplain of the electress dowager Palatine, and pastor in ordinary to the French church. The descent of the French into the Palatinate obliged our author to depart from Heidelberg in 1687. He went to Berlin, where the elector Frederic, afterwards king of Prussia, appointed him one of the ministers. There he continued 39 years, distinguishing himself by his writings. He

He was preacher to the queen of Prussia, Charlotta Sophia; and after her death, to the late king of Prussia. In 1707 he took a journey to England and Holland, where he had the honour to preach before Queen Anne; and might have settled in London, with the title of *chaplain to her majesty*. In 1712 he went to Helmsladt, in 1715 to Leipzig, and in 1725 to Breslau, to search for rare books and MSS. It is not certain whether it was he that first formed the design of the *Bibliothèque Germanique*, which began in 1720; or whether it was suggested to him by one of the society of learned men, which took the name of *Anonymous*, and who ordinarily met at his house. He died in 1728. His principal works are, 1. The History of the Council of Constance, 2 vols 4to. 2. A History of the Council of Pisa, 2 vols 4to. 3. The New Testament, translated from the Greek into the French, with Notes by Beauobre and Lenfant, 2 vols 4to. 4. The History of Pope Joan, from Spanheim's Latin Dissertation. 5. Several pieces in the *Bibliothèque Choise, La République des Lettres, La Bibliothèque Germanique*, &c.

LENGLET, NICHOLAS DU FRESNOY, L'ABBE', born at Beauvais in France, 1674, was a most fertile and useful French author on a variety of subjects, historical, geographical, political, and philosophical. The following deserve particular notice: 1. A Method of Studying History, with a Catalogue of the Principal Historians of every Age and Country, published in 1713; a work which established his reputation as an historical writer: it was translated into most of the modern languages, particularly our own, with considerable improvements, by Richard Rawlinson, L. L. D. and F. R. S. and published at London in 1730, in 2 vols 8vo. 2. A Copious Abridgement of Universal History and Biography, in chronological order, under the title of *Tablettes Chronologiques*; which made its first appearance at Paris in 1744, in 2 vols small 8vo. and was universally admired by the literati in all parts of Europe. The author attended with great candour, as every writer ought, to well-founded judicious criticisms. In future editions he made several alterations and improvements, and from one of these, we believe, that of 1759, an English translation was made, and published at London in 1762, in 2 vols. large 8vo. Du Fresnoy died in 1755: the Paris edition of 1759 was printed from the author's corrected copy; and the impression being sold off, another edition appeared in 1763, with considerable improvements by an unknown editor: to the biographical part a great number of names of respectable persons are added, not to be found in the former edition; and it has this superior advantage in the historical parts, that the general history is brought down to the year 1762. Du Fresnoy, however, has loaded his work with catalogues of saints, martyrs, councils, synods, heresies, schisms, and other ecclesiastical matters, fit only for the libraries of Popish convents and seminaries.

LENGTH, the extent of any thing material from end to end. In duration, it is applied to any space of time, whether long or short.

LENGTHENING, in ship carpentry, the operation of cutting a ship down across the middle, and adding a certain portion to her length. It is performed by sawing her planks asunder in different places of her

length, on each side of the midship frame, to prevent her from being too much weakened in one place. The two ends are then drawn apart to a limited distance; which must be equal to the proposed addition of length. An intermediate piece of timber is next added to the keel, upon which a sufficient number of timbers are erected, to fill up the vacancy produced by the separation. The two parts of the keelson are afterwards united by an additional piece which is secured down upon the floor timbers, and as many beams as may be necessary are fixed across the ship in the new interval. Finally, The planks of the side are prolonged so as to unite with each other; and those of the ceiling refitted in the same manner; by which the whole process is completed.

LENOX or DUNBARTONSHIRE, a county of Scotland. See DUNBARTONSHIRE. Among the rivers of this county is the Blane, which, though itself an inconsiderable stream, has been rendered famous by the birth of George Buchanan, the celebrated Latin poet and historian. The same part of the country gave birth to the great mathematician and naturalist, Baron Napier of Merchiston, inventor of the logarithms. The title of *Lenox*, with the property of great part of the shire, was heretofore vested in a branch of the royal family of Stuart, with which it was reunited in the person of King James VI. whose father, Henry Lord Darnley, was son of the duke of Lenox. This prince conferred the title upon his kinsman Esme Stuart, son of John Lord d'Aubigny in France; but his race failing at the death of Charles duke of Lenox and Richmond, and the estate devolving to the crown, King Charles II. conferred both titles on his own natural son by the duchess of Portsmouth; and they are still enjoyed by his posterity. The people of Lenoxshire are chiefly Lowlanders, though in some parts of it divine service is performed in the Erse language.—The most numerous clans in this district are the Macfarlanes, the Colquhouns, and the Buchanans.

LENS, a piece of glass, or any other transparent substance, the surfaces of which are so formed, that the rays of light, by passing through it, are made to change their direction, either tending to meet in a point beyond the lens, or made to become parallel after converging or diverging; or lastly, proceeding as if they had issued from a point before they fell upon the lens. Some lenses are convex, or thicker in the middle; some concave, or thinner in the middle; some plano-convex, or plano-concave; that is with one side flat, and the other convex or concave; and some are called *meniscuses*, or convex on one side and concave on the other. See DIOPTRICS.

Lenses, are of two kinds, either blown or ground.

Blown LENSES, are only made use of in the single microscope, and the common method of making them has been to draw out a fine thread of the soft white glass called *crystal*, and to convert the end of it into a spherule by melting it at the flame of a candle. Mr Nicholson observes that window glass affords excellent spherules. A thin piece from the edge of a pane of glass one tenth of an inch broad was held perpendicularly, and the flame of a candle was directed against it by means of the blow-pipe, when it became soft, and the lower end descended by its own weight to the distance of about two feet, where it remained suspended

Lent.
Lent.

by a thin thread of glass about $\frac{1}{300}$ of an inch in diameter. A part of this thread was applied endwise to the lower blue part of the flame of the candle without the blow-pipe, when the end became instantly white-hot, and formed a globule, which was gradually thrust towards the flame till it became sufficiently large. A number of these were made and examined, by viewing their focal images with a deep magnifier, when they appeared bright, perfect, and round.

Ground LENSES are such as are rubbed into the shape required, and polished. Several shapes have been proposed, but the spherical has been found to be the most practically useful. Yet by various modes of grinding, the artificer can produce no more than an approximation to a figure exactly spherical, and men of letters or others must depend entirely on the care and integrity of workmen for the sphericity of the lenses of their telescopes. Mr Jenkins has described a machine, which being so contrived as to turn a sphere at one and the same time on two axes, cutting each other at right angles, will produce the segment of a true sphere, merely by turning round the wheels, and that without any care or skill in the workmen. See MECHANICS.

LENT, a solemn time of fasting in the Christian church, observed as a time of humiliation before Easter, the great festival of our Saviour's resurrection.

Those of the Romish church, and some of the Protestant communion, maintain, that it was always a fast of 40 days, and, as such, of apostolical institution. Others think it was only of ecclesiastical institution, and that it was variously observed in different churches, and grew by degrees from a fast of 40 hours to a fast of 40 days. This is the sentiment of Morton, Bishop Taylor, Du Moulin, Daillé, and others.

Anciently the manner of observing lent among those who were piously disposed, was to abstain from food till evening: their only refreshment was a supper; and then it was indifferent whether it was flesh or any other food, provided it was used with sobriety and moderation.

Lent was thought the proper time for exercising, more abundantly, every species of charity. Thus what they spared from their own bodies by abridging them of a meal, was usually given to the poor; they employed their vacant hours in visiting the sick and those that were in prison, in entertaining strangers, and reconciling differences. The imperial laws forbade all prosecution of men in criminal actions, that might bring them to corporal punishment and torture, during the whole season. This was a time of more than ordinary strictness and devotion, and therefore in many of the great churches they had religious assemblies for prayer and preaching every day. All public games and stage plays were prohibited at this season; as also the celebration of all festivals, birth days, and marriages, as unsuitable to the present occasion.

The Christians of the Greek church observe four lents: the first commences on the 15th of November; the second is the same with our lent; the third begins the week after Whitsuntide, and continues till the festival of St Peter and St Paul; and the fourth commences on the first of August, and lasts no longer than

till the 15th. These lents are observed with great strictness and austerly; but on Saturdays and Sundays they indulge themselves in drinking wine and using oil, which are prohibited on other days.

LENTIL. See ERVUM, BOTANY *Index*.

LENTINI. See LEONTINI.

LENTISCUS. See PISTACIA, BOTANY *Index*.

LEO. See FELIS, MAMMALIA *Index*.

LEO, in *Astronomy*, the fifth of the 12 signs of the zodiac. The stars in the constellation *Leo*, in Ptolemy's catalogue are 27, besides the unformed, which are 8; in Tycho's 30; in the Britannic catalogue 95.

LEO X. *Pope*, second son of Lorenzo de Medici, was born at Florence in December 1475, and received the baptismal name of *Giovanni*, or John. He received the tonsure at seven years of age, his father having destined him for the church. Being even at that early period declared capable of clerical preferment, he obtained two rich abbacies through the interest of his father with Louis XI of France, and Pope Sixtus IV. At a very early period he held no fewer than 29 church preferments, a strong proof of the most scandalous corruption, as well as of the interest which his family enjoyed. In the time of Innocent VIII. he was promoted to the high rank of cardinal, when no more than 13 years of age, which took place in the year 1488. If the great influence of his father was unquestionably censurable in promoting the rapid and illegal advancement of his son, it is but justice to admit that he employed all his efforts to qualify him for such premature dignity. The learned Angelo Poliziano had the care of his early education, which was greatly accelerated by the uncommon gravity and fidelity of his disposition. He was invested with the purple in 1492, going afterwards to reside at Rome as one of the sacred college. Having opposed the election of Alexander VI. to the pontificate, he found it prudent to withdraw to Florence, in which place he acquired much personal esteem; but on the invasion of Italy by Charles VIII. of France, he was involved in the expulsion of his brother Piero, and took refuge at Bologna. In 1499 he made a tour through the states of Venice, Germany, and France, going afterwards to Rome, where he lived safe and respected during the pontificate of Alexander, in consequence of his prudent behaviour.

In 1505, when 30 years of age, he began to take an active part in public affairs, and Julius II. appointed him governor of Perugia. As he adhered with unshaken resolution to the interest of the pope, he acquired the confidence of his holiness, in so eminent a manner, that he was entrusted with the direction of the papal army against France; and if he was not competent to conduct the military operations, he was of singular service in maintaining good order in the camp. He was taken prisoner at the bloody battle of Ravenna in 1512, and conveyed to Milan, where the dignity of his sacred office procured him respect. From this place he found means to escape, and returned to Bologna, assuming the government of the district in the capacity of the pope's legate.

At the election of a new pope in the room of Julius II. he was chosen to the pontificate, being then only 38 years of age. Whatever might be the leading motives

Lentil
||
Leo.

Leo. of the conclave for electing so young a pope, it is agreed on all hands, that it was not effected by those corrupt practices too common on such occasions; and he ascended the throne on the name of Leo X. with greater proofs of affection on the part of both Italians and foreigners than the greater part of his predecessors. He displayed his love of literature by the nomination of Bembo and Sadoleti to the office of papal secretaries.

One of his first attempts was to free Italy from the dominion of foreign powers; and having taken into pay a large body of Swiss, he gained a victory over the French in the reign of Louis XII. at the bloody battle of Novara, by which means they were driven from Italy; and the king of France having incurred ecclesiastical censure, submitted in form, and received absolution. Having thus secured internal tranquillity, he turned his attention to the encouragement of literature and men of genius. He effected the restoration of the Roman university to its former splendour by means of new grants and privileges, and by filling the professorships with distinguished characters from every quarter. A Greek press was established in the city, and all Europe was informed that persons bringing ancient manuscripts to the pope would be liberally rewarded, besides having them printed at the expence of the holy see. He also promoted the study of oriental literature, and he had the honour of founding the first professorship of the Syriac and Chaldaic languages at Bologna.

On the death of Louis XII. of France, and the accession of Francis I. to the throne, it soon became apparent that a new war was inevitable in the north of Italy. Leo endeavoured to remain neuter, but without success, in consequence of which he joined in a league with the emperor, the king of Arragon, the states of Milan and Florence, and the Swiss cantons, against the French king and the state of Venice. But he soon found it expedient to desert his allies, and form a union with Francis, which took place in 1515, at an interview between the two sovereigns.

In 1517, the duke of Urbino, whom he had expelled, in order to make way for his nephew Lorenzo, collected an army, and by rapid movements regained his capital and dominions, which chagrined Leo to such a degree, that he endeavoured to raise all the Christian princes against him. He raised an army under the command of his nephew, and the duke was finally compelled to relinquish his dominions upon honourable terms. In this year the life of Leo was in danger, and all his moments embittered by a conspiracy against him in his own court. Petrucci, the chief author of it, had formed a plan of destroying the pope by poison; but having failed in this attempt, he withdrew from Rome, still, however, carrying on a correspondence with his secretary. Some of his letters being intercepted, he was arrested on his way to Rome, and committed to prison. He was strangled, and his accomplices were put to death with the severest tortures. To shelter himself from danger, whether real or imaginary, Leo created 31 new cardinals in one day, chiefly from among his own relations, and some of them deserving of such dignity by their virtues and talents.

Vol. XI. Part II.

Leo. In the reign of this pontiff began the reformation of religion under the celebrated Martin Luther, who inflicted such a wound on the Romish church as will never be healed. Leo's taste for luxurious magnificence and every object of expence having exhausted his coffers, he took from the church the profits arising from the sale of indulgences for his own private emolument. These wares were extolled in language which shocked the pious and thinking part of mankind, and facilitated the progress of the reformation in the hands of such a man as Luther, whom nothing could intimidate. This great man during his opposition to the extravagance of Leo in the sale of indulgences, was still willing to be reconciled; but as he insisted on making an unqualified appeal to the language of Scripture, and Leo would admit of nothing but an unqualified appeal to the decrees of the church, it is obvious that a reconciliation was impossible. The works of Luther were burnt in different places by Leo's command, and Luther in his turn made a solemn and public contumacious of the papal decrees and constitutions, and even of the bull itself. It was this pontiff who conferred on Henry VIII. of England the title of defender of the faith, to which he appears to have had very little claim.

The private hours of Leo, it is said, were devoted to indolence, or to amusements; and that some of them were unworthy of his clerical dignity. Many enormities are ascribed to him which we shall pass over in silence, as they do not appear to have such incontestable evidence as to warrant the belief of them. He never lost sight of his favourite idea of expelling the French from Italy. The Swiss who had been in the service of France were induced to desert, the allies crossed the Adda, and entered Milan without opposition. They next entered the territories of the duke of Ferrara who had espoused the cause of France. Many of his strong places were taken, and siege was about to be laid to his capital, when it was prevented by the indisposition of the pope, which in the space of eight days terminated in his death, on December 1. 1521, in the 46th year of his age, and the 9th of his pontificate. It was supposed by some that he died by poison, but we have seen no sufficient proof for such a conclusion. Without attempting to draw the moral and political character of this celebrated pontiff, about which mankind have been so much divided, it may be fairly asserted that he claims the gratitude of posterity for the ample encouragement which he afforded to men of science and literature, and the eagerness with which he promoted the study of the fine arts, qualities sufficient to veil all the failings or faults which can justly be charged to his account. This character of Leo has been finely celebrated by Pope in the following verses.

But see! each muse, in Leo's golden days,
Starts from her trance; and trims her wither'd bays;
Rome's ancient Genius, o'er its ruins spread,
Shakes off the dust, and rears his rev'rend head.
Then Sculpture and her sister Arts revive:
Stones leap to form, and rocks begin to live;
With sweeter notes each rising temple rung;
A Raphael painted, and a Vida sung.

LEO, S', a small but strong town of Italy, in the territory

Leonard
||
Leonard.

territory of the church, and duchy of Urbino, with a bishop's see. It is seated on a mountain, near the river Marrechia, in E. Long. 12. 25. N. Lat. 43. 57.

LEOMINSTER, a town of Herefordshire, in England, seated on the river Lug, which waters the north and east sides of the town, and over which there are several bridges. It is a large, handsome, populous borough; and is a great thoroughfare betwixt South Wales and London, from which last it is distant 113 measured miles. In King John's reign it was burnt, but soon rebuilt. It was incorporated by Queen Mary, and is governed by a high steward, bailiff, recorder, &c. The best flax is said to grow here, and it has been equally noted for the best wheat, barley, and the finest bread. The inhabitants have a considerable trade not only in wool, but in gloves, leather, hat-making, &c. and there are several rivers in and about the town on which they have mills and other machines. Near its church are some remains of its priory; and on a neighbouring hill are the ruins of a palace, called to this day Comfort Castle. It sends two members to parliament. W. Long. 2. 45. N. Lat. 52. 20.

LEON, an ancient town of France, in Lower Bretagne, and capital of the Lyonnois, with a bishop's see. It is seated near the sea, in W. Long. 3. 55. N. Lat. 48. 41.

LEON, a province of Spain, with the title of a kingdom; bounded on the north by Asturias; on the west by Galicia and Portugal; and on the south by Estremadura and Castile, which also bounds it on the east. It is about 125 miles in length, and 100 in breadth; and is divided into two almost equal parts by the river Duero, or Douro. It produces all the necessaries of life, and Leon is the capital town.

LEON, an ancient and large episcopal town of Spain, and capital of the kingdom of that name, built by the Romans in the time of Galba. It has the finest cathedral church in all Spain. It was formerly more rich and populous than at present, and had the honour of being the capital of the first Christian kingdom in Spain. It is seated between two sources of the river Esta, in W. Long. 5. 13. N. Lat. 42. 55.

LEON, *Peter Cicca de*, author of the history of Peru. He left Spain, his native country, at 13 years of age in order to go into America, where he resided 17 years; and observed so many remarkable things, that he resolved to commit them to writing. The first part of his history was printed at Seville in 1553. He began it in 1541, and ended it in 1550. He was at Lima, the capital of the kingdom of Peru, when he gave the finishing stroke to it, and was then 32 years of age.

LEON DE NICARAGUA, a town of North America, in New Spain, and in the province of Nicaragua; the residence of the governor, and a bishop's see. It consists of about 1000 houses, and has several monasteries and nunneries belonging to it. At one end of the town is a lake which ebbs and flows like the sea. The town is seated at the foot of a volcano, which renders it subject to earthquakes. It was taken by the bucaniers in 1685, in sight of a Spanish army who were six to one. W. Long. 86. 10. N. Lat. 12. 25.

LEONARD DE NOBLET, *St*, an ancient town of France, in the province of Guienne and territory of Limosin, with a considerable manufactory of cloth and

paper. It is seated on the river Vienne, in E. Long. 1. 35. N. Lat. 45. 50.

LEONARDO DA VINCI. See VINCI.

LEONCLAVIUS, JOHN, one of the most learned men of the 16th century, was a native of Westphalia. He travelled into Turkey, and collected excellent materials for composing *The Ottoman History*; and it is to him the public is indebted for the best account we have of that empire. To his knowledge in the learned languages he had added that of the civil law; whereby he was very well qualified to translate the *Basilica*. His other versions were esteemed, though critics pretend to have found many faults in them. He died in 1593, aged 60.

LEONIDAS I. king of Sparta, a renowned warrior, slain in defending the straits of Thermopylae against Xerxes, 480 B. C. See SPARTA.

LEONINE, in poetry, is applied to a kind of verses which rhyme at every hemistich, the middle always chiming to the end. Of which kind we find several ancient hymns, epigrams, prophecies, &c.—For instance, *Muretus* speaking of the poetry of Lorenzo Gambara of Bresse, says,

*Brixia, veſtratis merdoſa volumina vatis,
Non ſunt noſtrates tergere digna natis.*

The following one is from the school of Salernum:

Ut vites pœnam de potibus incipe cœnam.

The origin of the word is somewhat obscure: *Pafquier* derives it from one Leoninus or Leonius, who excelled in this way; and dedicated several pieces to Pope Alexander III.; others derive it from Pope Leo; and others from the beast called *lion*, by reason it is the loftiest of all verses.

LEONTICA, feasts or sacrifices celebrated among the ancients in honour of the sun.—They were called *Leontica*, and the priest who officiated at them *Leones*, because they represented the sun under the figure of a lion radiant, bearing a tiara, and gripping in his two fore paws the horns of a bull, who struggled with him in vain to disengage himself.

The critics are extremely divided about this feast. Some will have it anniversary, and to have made its return not in a solar but in a lunar year; but others hold its return more frequent, and give instances where the period was not above two hundred and twenty days.

The ceremony was sometimes also called *Mithriaca*, Mithras being the name of the sun among the ancient Persians. There was always a man sacrificed at these feasts, till the time of Hadrian, who prohibited it by a law. Commodus introduced the custom afresh, after whose time it was again exploded.

LEONTICE, LION'S LEAF, a genus of plants belonging to the hexandria class; and in the natural method ranking under the 24th order, *Corydales*. See BOTANY Index.

LEONTINI, or LEONTIUM, in *Ancient Geography*, a town of Sicily on the south side of the river Terias, 20 miles north-west of Syracuse. The territory, called *Campi Leontini*, was extremely fertile (*Cicero*): these were the *Campi Lastrigoni*, anciently so called; the seat of the *Lætrigons*, according to the commentators on the poets. The name *Leontini* is from *Leo*, the impression

Leonard
||
Leontini

Leontium || Leprosy. pression on their coin being a lion. Now call *Lentini*, a town situated in the Val di Noto, in the south-east of Sicily.

LEONTIUM, one of the twelve towns of Achaia, whether on, or more distant from, the bay of Corinth, is uncertain. *Leontium* of Sicily. See LEONTINI.

LEONTODON, DANDELION, a genus of plants belonging to the syngenesia class, and in the natural method ranking under the 49th order, *Compositae*. See BOTANY Index.

LEONURUS, LION'S-TAIL, a genus of plants belonging to the didynamia class, and in the natural method ranking under the 42d order, *Verticillatae*. See BOTANY Index.

LEOPARD. See FELIS, MAMMALIA Index.

LEOPARD'S BANE. See DORONICUM, BOTANY Index.

LEPANTO, a strong and very considerable town of Turkey in Europe, and in Livadia, with an archbishop's see and a strong fort. It is built on the top of a mountain, in form of a sugar-loaf; and is divided into four towns, each surrounded by walls, and commanded by a castle on the top of the mountain. The harbour is very small, and may be shut up by a chain, the entrance being but 50 feet wide. It was taken from the Turks by the Venetians in 1678; but was afterwards evacuated, and the castle demolished in 1699, in consequence of the treaty of Carlowitz. It was near this town that Don John of Austria obtained the famous victory over the Turkish fleet in 1571. The produce of the adjacent country is wine, oil, corn, and rice. Turkey leather is also manufactured here. The wine would be exceeding good if they did not pitch their vessels on the inside, but this renders the taste very disagreeable to those who are not accustomed to it. The Turks have six or seven mosques here, and the Greeks two churches. It is seated on a gulf of the same name, in E. Long. 22. 13. N. Lat. 38. 34.

LEPAS, the ACORN, a genus of shell-fish belonging to the order of vermes testacea. See CONCHOLOGY Index.

LEPIDIUM, DITTANDER, or *Pepperwort*, a genus of plants belonging to the tetradynamia class, and in the natural method ranking under the 39th order, *Siliquose*. See BOTANY Index.

LEPIDOPTERA, in *Zoology*, an order of insects, with four wings, which are covered with imbricated scales. See ENTOMOLOGY.

LEPISMA, a genus of insects belonging to the order of *Aptera*. See ENTOMOLOGY Index.

LEPROSY, a foul cutaneous disease, appearing in dry, white, thin, scurfy scabs, either on the whole body, or only some parts of it, and usually attended with a violent itching and other pains. See MEDICINE Index.

The leprosy is of various kinds, but the Jews were particularly subject to that called *Elephantiasis*. Hence the Jewish law excluded lepers from communion with mankind, banishing them into the country or uninhabited places, without excepting even kings. When a leper was cleansed, he came to the city gate, and was there examined by the priests; after this he took two live birds to the temple, and fastened one of them to a wisp of cedar and hyssop tied together with a scarlet ribbon; the second bird was killed by the leper, and the blood of it received into a vessel of water; with

this water the priest sprinkled the leper, dipping the wisp and the live bird into it: this done, the live bird was let go; and the leper, having undergone this ceremony, was again admitted into society and to the use of things sacred. See Levit. xiii. 46. 47. and Levit. xiv. 1, 2, &c.

LEPTOCEPHALUS, a genus of fishes, belonging to the order of *Apodes*. See ICHTHOLOGY Index.

LEPTOPOLYGINGLIMI, in *Natural History*, a genus of fossil shells, distinguished by a number of minute teeth at the hinge. Specimens of these are found at Harwich cliff, and in the marl pits of Suffex.

LEPTUM, in antiquity, a small piece of money, which, according to some, was only the eighth part of an obolus; but others will have it to be a silver or brass drachm.

LEPTURA, a genus of insects belonging to the order of coleoptera. See ENTOMOLOGY Index.

LEPUS, a genus of quadrupeds belonging to the order of glires. See MAMMALIA Index.

LEPUS, the hare, in *Astronomy*, a constellation of the southern hemisphere; whose stars in Ptolemy's catalogue are 12; in that of Tycho's 13; and in the Britannic 19.

LERCHEA, a genus of plants belonging to the monadelphia class. See BOTANY Index.

LERIA, or LEIRIA, a strong town of Portugal, in Estremadura, with a castle and bishop's see. It contains about 3500 inhabitants, and was formerly the residence of the kings of Portugal. W. Long. 7. 50. N. Lat. 39. 40.

LERIDA, an ancient, strong, and large town of Spain, in Catalonia, with a bishop's see, an university, and a strong castle. This place declared for King Charles after the reduction of Barcelona in 1705; but it was retaken by the duke of Orleans in 1707, after the battle of Almanza. It is seated on a hill near the river Segra, and in a fertile soil, in E. Long. 0. 35. N. Lat. 41. 31.

LERINA, or PLANASIA, in *Ancient Geography*, one of the two small islands over against Antipolis, called also *Lerinas* and *Lirinus*. Now St Honorat, on the coast of Provence, scarce two leagues to the south of Antibes.

LERINS, the name of two islands in the Mediterranean sea, lying on the coast of Provence in France, five miles from Antibes; that near the coast, called *St Margaret*, is guarded by invalids, state prisoners being sent here. It was taken by the English in 1746, but Marshal Belleisle retook it in 1747. The other is called *St Honorat*; and it is less than the former, but has a Benedictine abbey.

LERMA, a town of Spain, in Old Castile, seated on the river Arlanza, with the title of a *duchy*. W. Long. 3. 5. N. Lat. 42. 2.

LERNA, in *Ancient Geography*, not far from Argos, on the confines of Laconia; supposed to be a town of Laconia, but on the borders of Argolis; the position Pausanias allots to it, near Temenium, on the sea; without adding whether it is a town, river, or lake. According to Strabo, it is a lake, situated between the territories of Argos and Mycene, in contradiction to Pausanias. If there was a town of this name, it

Leptocephalus || Lerna.

Lerna seems to have stood towards the sea, but the lake to have been more inland. Mela calls it a well known town on the Sinus Argolicus; and Statius by Lerna seems to mean something more than a lake. This, however, is the lake in which, as Strabo says, was the fabled Hydra of Hercules: therefore called *Lerna Anguifera* (Statius). The lake runs in a river or stream to the sea, and perhaps arises from a river (Virgil). From the lake the proverb, *Lerna Malorum*, took its rise; because, according to Strabo, religious purgations were performed in it: or, according to Hefychius, because the Argives threw all their filth into it.

LERNEA, a genus of animals of the class of vermes. See HELMINTHOLOGY *Index*.

LERNICA, formerly a large city in the island of Cyprus, as appears from its ruins: but is now no more than a large village, seated on the southern coast of that island, where there is a good road, and a small fort for its defence.

LERO, in *Ancient Geography*, one of the two small islands in the Mediterranean, opposite to Antipolis, and half a mile distant from it to the south. Now *St Margarita*, over against Antibes, on the coast of Provence.

LERO, or *Leros*, an island of the Archipelago, and one of the Sporades; remarkable, according to some authors, for the birth of Patroclus. E. Long. 26. 15. N. Lat. 37. 0.

LE ROY LE VEUT, the king's assent to public bills. See the articles BILL, STATUTE, and PARLIAMENT.

LERWICK, a town on the Mainland of Shetland, and the seat of the courts of that shewartry. It is situated on the spacious harbour called *Lerwick* or *Bressay sound*, and derives its only importance from the courts of law, and the vessels employed in the whale-fishery, which make a rendezvous of the bay. It is computed to contain about 1000 inhabitants. The parish extends about six miles along the sea coast, and is in no place more than a mile in breadth. On the north and east it is bounded by the sea, which separates it from Bressay island. The surface of the parish is rocky and mountainous, but there are a number of fine arable fields on the sea coast, the soil of which is light and sandy, but fertile and productive. Near the north end of the town there is a small fortification called *Fort Charlotte*, which commands the north entry to Bressay sound, and is garrisoned by a detachment of invalids. It was completely repaired by order of government in the year 1781. There are several large cannon for commanding the harbour and protecting the town. There is a straw-plaiting manufactory at Lerwick, furnishing upwards of 50 girls with employment, who have one penny per yard for their work; 20 yards of which can be made by some of them in the course of a day. It is carried on by a company in London. There are two chalybeate springs in the vicinity of the town, but neither of them is highly impregnated, although the one is stronger than the other. W. Long. 1. 30. N. Lat. 60. 20.

LESBOS, a large island in the Ægean sea, on the coast of Ætolia, about 168 miles in circumference. It has been severally called *Pelafgia*, from the Pelafgi by whom it was first peopled; *Macaria*, from Macareus who settled in it; and *Lesbos*, from the son-in-law and

successor of Macareus who bore the same name. The chief towns of Lesbos were Methymna and Mitylene. It was originally governed by kings, but they were afterwards subjected to the neighbouring powers. The wine which it produced was greatly esteemed by the ancients, and still is in the same repute among the moderns. The Lesbians were so debauched and dissipated, that the epithet of *Lesbian* was often used to signify debauchery and extravagance. Lesbos has given birth to many illustrious persons, such as Arion, Terpander, Sappho, &c. See MITYLENE.

LESCAILLE, JAMES, a celebrated Dutch poet and printer, was born at Geneva. He and his daughter Catherine Lescaille have excelled all the Dutch poets. That lady, who was surnamed the *Sappho of Holland*, and the *tenth Muse*, died in 1711. A collection of her poems has been printed, in which are the Tragedies of Genferic, Wenceslaus, Herod and Mariamne, Hercules and Dejanaira, Nicomedes, Ariadne, Cassandra, &c. James Lescaille her father deserved the poet's crown, with which the emperor Leopold honoured him in the year 1603: he died about the year 1677, aged 67.

LESCAR, a town of Gascony, in France, and in the territory of Bearn, with a bishop's see; seated on a hill, in W. Long. 0. 30. N. Lat. 43. 23.

LESGUIS, a people of Asia, whose country is indifferently called by the Georgians *Lesquistan* and *Daghestan*. It is bounded to the south and east by Persia and the Caspian; to the south-west and west by Georgia, the Ossi, and Kisti; and to the north by the Kisti and Tartar tribes. It is divided into a variety of districts, generally independent, and governed by chiefs elected by the people. Guldenstaedt has remarked, in the Lesguis language, eight different dialects, and has classed their tribes in conformity to this observation.

The first dialect comprehends 15 tribes, which are as follow: 1. Avar, in Georgia Chunlagh. The chief of this district, commonly called *Avar Khan*, is the most powerful prince of Lesquistan, and resides at Kabuda, on the river Kaseruk. The village of Avar is, in the dialect of Andi, called *Harbul*. 2. Kaseruk, in the high mountains, extending along a branch of the Koifu, called *Karak*. This district is dependant on the khan of the Kasi Kumychs. 3. Idatle, on the Koifu, joining on the Andi; subject to the Avar Khan. 4. Mukratle, situated on the Karak, and subject to the Avar Khan. 5. Onfekul, subject to the same, and situated on the Koifu. 6. Karakhle, upon the Karak, below Kaseruk, subject to the same. 7. Ghumbet, on the river Ghumbet, that joins the Koifu, subject to the chief of the Coumyks. 8. Arakan; and, 9. Burtuma, on the Koifu. 10. Antfugh, on the Samura, subject to Georgia. 11. Tebel, on the same river, independent. 12. Tamurgi, or Tumural, on the same river. 13. Akhti; and, 14. Rutal, on the same. 15. Dshar, in a valley that runs from the Alazan to the Samura. It was formerly subject to Georgia, but is now independent. In this district are seen remains of the old wall that begins at Derbent, and probably terminates at the Alazan.—The inhabitants of Derbent believe that their town was built by Alexander, and that this wall formerly extended as far as the Black sea. It is, however,

Lescaille
||
Lesguis.

Lefguis.

ever, probable, from many inscriptions in old Turkish, Persian, Arabic, and Russian characters, that the wall, and the aqueducts with their various subterraneous passages, many of which are now filled up, are of high antiquity. This town suffered greatly during its siege by Sultan Amurath, who entirely destroyed the lower quarter, then inhabited by Greeks. It was again taken by Schah Abbas. (Gaerber.) This town is the old Pylæ Caspice.

The second dialect is spoken in the two following districts: 1. Dido, or Didonli, about the source of the Samura. This district is rich in mines; a ridge of uninhabited mountains divides it from Caket. 2. Unso, on the small rivulets that join the Samura. These two districts, containing together about 1000 families, were formerly subject to Georgia, but are now independent.

The third dialect is that of Kabuth, which lies on the Samura rivulets, east of Dido, and north of Caket.

The fourth dialect is that of Andi, situated on a rivulet that runs into the Koifu. Some of its villages are subject to the Avar Khan, but the greater part to the khan of Axai. The whole consists of about 800 families.

The fifth dialect is common to four districts, namely, 1. Akutha, on the Koifu, subject to the Usmei, or khan of the Caitaks, and Kara Caitaks, containing about 1000 families. The following custom is attributed by Colonel Gaerber to the subjects of this prince: "Whenever the Usmei has a son, he is carried round from village to village, and alternately suckled by every woman who has a child at her breast until he is weaned. This custom, by establishing a kind of brotherhood between the prince and his subjects, singularly endears them to each other." 2. Balkar. 3. Zudakara, or Zudakh, down the Koifu, subject to the Usmei. 4. Kubelha, near the Koifu. Colonel Gaerber, who wrote an account of these countries in 1728, gives the following description of this very curious place: "Kubelha is a large strong town, situated on a hill between high mountains. Its inhabitants call themselves Franki (Franks, a name common in the east to all Europeans), and relate, that their ancestors were brought hither by some accident, the particulars of which are now forgotten. The common conjecture is, that they were mariners cast away upon the coast; but those who pretend to be better versed in their history, tell the story this way:—The Greeks and Genoese, say they, carried on, during several centuries, a considerable trade, not only on the Black sea, but likewise on the Caspian, and were certainly acquainted with the mines contained in these mountains, from which they drew by their trade with the inhabitants great quantities of silver, copper, and other metals. In order to work these upon the spot, they sent hither a number of workmen to establish manufactures, and instruct the inhabitants. The subsequent invasions of the Arabs, Turks, and Monguls, during which the mines were filled up, and the manufactures abandoned, prevented the strangers from effecting their return, so that they continued here, and erected themselves into a republic. What renders this account the more probable is, that they are still excellent artists, and make very good fire arms, as well rifled as plain; sabres, coats of mail, and several

articles in gold and silver, for exportation. They have likewise, for their own defence, small copper cannons, of three pounds calibre, cast by themselves. They coin Turkish and Persian silver money, and even rubles, which readily pass current, because they are of the full weight and value. In their valleys they have pasture and arable lands, as well as gardens; but they purchase the greater part of their coin, trusting chiefly for support to the sale of their manufactures, which are much admired in Persia, Turkey, and the Crimea. They are generally in good circumstances, are a quiet, inoffensive people, but high spirited, and independent. Their town is considered as a neutral spot, where the neighbouring princes can deposit their treasures with safety. They elect yearly twelve magistrates, to whom they pay the most unlimited obedience; and as all the inhabitants are on a footing of perfect equality, each individual is sure to have in his turn a share in the government. In the year 1725, their magistrates, as well as the Usmei, acknowledged the sovereignty of Russia, but without paying any tribute." 5. Zudakara, or Zadakh, down the Koifu, subject to the Usmei. It contains about 2000 families.

The sixth dialect belongs to the districts on the eastern slope of Caucasus, between Tarku and Derbent, which are, 1. Caitak; and, 2. Tabasseran, or Kara-Caitak, both subject to the Usmei.

The seventh dialect is that of Kafi-Coumyk, on a branch of the Koifu, near Zudakara. This tribe has a khan, whose authority is recognized by some neighbouring districts.

The eighth dialect is that of Kurale, belonging to the khan of Cuba.

Besides these, there are some other Lefguis tribes, whose dialects Mr Guldentaedt was unable to procure. From a comparison of those which he has obtained, it appears that the language of the Lefguis has no kind of affinity with any other known language, excepting only the Samoyede, to which it has a remote resemblance.

This people is probably descended from the tribes of mountaineers, known to ancient geographers under the name of *Lefgæ*, or *Ligyæ*. The strength of their country, which is a region of mountains whose passes are known only to themselves, has probably at all times secured them from foreign invasion; but as the same cause must have divided them into a number of tribes, independent of each other, and perhaps always distinguished by different dialects, it is not easy to imagine any common cause of union which can ever have assembled the whole nation, and have led them to undertake very remote conquests. Their history, therefore, were it known, would probably be very uninteresting to us. They subsist by raising cattle, and by predatory expeditions into the countries of their more wealthy neighbours. During the troubles in Persia, towards the beginning of this century, they repeatedly sacked the towns of Shamachie and Ardebil, and ravaged the neighbouring districts; and the present wretched state of Georgia and of part of Armenia, is owing to the frequency of their incursions. In their persons and dress, and in their general habits of life, as far as these are known to us, they greatly resemble the Circassians.

LESKARD, a town in Cornwall, seated in a plain,

Lefguis,
Leskard.

Leslie.

is a corporation, and sends two members to parliament. It had formerly a castle, now in ruins. It is one of the largest and best built towns in Cornwall, with the greatest market. It was first incorporated by Edward earl of Cornwall, afterwards by King John's son, Richard king of the Romans, and had privileges from Edward the Black Prince. Queen Elizabeth granted it a charter; by which it was to have a mayor and burgeses, who should have a perpetual succession, purchase lands, &c. Here is a handsome town hall built on stone pillars, with a turret on it, and a noble clock with four dials, a large church, a meeting house, an eminent free school, and a curious conduit; and on the adjacent commons, which feed multitudes of sheep, there have been frequent horse races. Here is a great trade in all manufactures of leather; and some spinning, which is encouraged by the clothiers of Devonshire. On the hills of North Leskard, and in the way from hence to Launceston, are many mines of tin, which is cast at the blowing houses into blocks, that are sent hither to be coined.

LESLIE, JOHN, bishop of Ross in Scotland, the son of Gavin Leslie an eminent lawyer, was born in the year 1526, and educated at the university of Aberdeen; of which diocese he was made official, when but a youth. He was soon after created doctor of civil and canon law; but being peculiarly addicted to the study of divinity, he took orders, and became parson of Uue. When the Reformation began to spread in Scotland, and disputes about religion ran high, Dr Leslie, in 1560, distinguished himself at Edinburgh as a principal advocate for the Romish church, and was afterwards deputed by the chief nobility of that religion to condole with Queen Mary on the death of her husband the king of France, and to invite her to return to her native dominions. Accordingly, after a short residence with her majesty, they embarked together at Calais in 1561, and landed at Leith. She immediately made him one of her privy council, and a senator of the college of justice. In 1564, he was made abbot of Lindores; and on the death of Sinclair was promoted to the bishopric of Ross. These accumulated honours he wished not to enjoy in luxurious indolence. The influence derived from them, he exerted to the prosperity of his country. It is to him that Scotland is indebted for the publication of its laws, commonly called "The black acts of parliament," from the Saxon character in which they were printed. At his most earnest desire, the revision and collection of them were committed to the great officers of the crown. In 1568, Queen Mary having fled to England for refuge, and being there detained a prisoner, Queen Elizabeth appointed certain commissioners at York to examine into the cause of the dispute between Mary and her subjects. These commissioners were met by others from the queen of Scots. The bishop of Ross was of the number, and pleaded the cause of his royal mistress with great energy, though without success; Elizabeth had no intention to release her. Mary, disappointed in her expectations from the conference at York, sent the bishop of Ross ambassador to Elizabeth, who paid little attention to his complaints. He then began to negotiate a marriage between his royal mistress and the duke of Norfolk; which negotiation, it is well known, proved fatal to the duke, and was the cause of Leslie's being sent

to the Tower. In 1573 he was banished the kingdom, and retired to Holland. The two following years he spent in fruitless endeavours to engage the powers of Europe to espouse the cause of his queen. His last application was to the pope; but the power of the heretic Elizabeth had no less weight with his holiness than with the other Roman Catholic princes of Europe. Finding all his personal applications ineffectual, he had recourse to his pen in Queen Mary's vindication; but Elizabeth's *ultima ratio regum* was too potent for all his arguments. Bishop Leslie, during his exile, was made coadjutor to the archbishop of Rouen. He was at Brussels when he received the account of Queen Mary's execution; and immediately retired to the convent of Guirternberg near that city, where he died in the year 1596. It was during the long and unfortunate captivity of Mary, that he amused himself in writing the History of Scotland, and his other works. The elegance and charms of literary occupations served to assuage the violence of his woes. His knowledge and judgement as an historian are equally to be commended. Where he acts as the transcriber of Boece, there may be distinguished, indeed, some of the inaccuracies of that writer. But, when he speaks in his own person, he has a manliness, a candour, and a moderation, which appear not always even in authors of the Protestant persuasion. His works are, 1. *Afflicti animi consolationes*, &c. composed for the consolation of the captive queen. 2. *De origine, moribus, et gestis Scotorum*. 3. *De titulo et jure serenissimæ Mariæ Scotorum reginæ, quo regni Angliæ successionem sibi jussit vindicat*. 4. *Parænesis ad Anglos et Scotos*. 5. *De illustri saninarum in republ. administranda*, &c. 6. *Oratio ad reginam Elizabetham pro libertate impetranda*. 7. *Parænesis ad nobilitatem populumque Scoticum*. 8. An account of his proceedings during his embassy in England from 1568 to 1572; manuscript, Oxon. 9. Apology for the bishop of Ross, concerning the duke of Norfolk; manuscript, Oxon. 10. Several letters, manuscript.

LESLIE, Charles, a learned divine of Ireland, the time and place of whose birth is uncertain. He was educated at Inniskilling; and in 1664, was created fellow of Trinity-college, Dublin, where he continued till he became A. M. At the decease of his father he came over to England, and entered himself in the Temple at London. The study of the law very soon disgusted him, and he turned all his attention to theology, being admitted into holy orders in 1680. In 1687, he was chosen chancellor of the church and diocese of Connor, at which time he made himself extremely unpopular by his determined opposition to the tenets of the church of Rome. He imbibed the absurd and pernicious doctrines of passive obedience and non-resistance, by which his judgement was so much biassed, that he refused to take the oath of allegiance to King William and Queen Mary, at the revolution.

He was a strenuous champion for the cause of the nonjurors, in defence of which he published a work in 1692, being an answer to The State of Protestants in Ireland under the late King James's Government, written by Archbishop King. He also wrote a paper called the Rehearsal, originally published once a-week, and afterwards twice, in a folio half-sheet, consisting of a dialogue on the affairs of the times. It lasted during

Leslie.

Leslie
||
Leslines.

six or seven years. They were afterwards collected and published by an eminent writer, who observes that he pursues a thread of argument in them all, against the lawfulness of resistance in any case whatever, deriving the source of government wholly from God. He wrote against the Deists, Jews, Papists, and Socinians, all of which he collected together, and published in two volumes folio, with the exception of a very illiberal piece against the learned and pious Dr Tillotson.

The frequent visits which he paid to the courts of St Germans and Bar-le-Duc, made him obnoxious to the British government, which was increased by his "Hereditary Right of the Crown of England Asserted," of which he was the reputed author. He was sent to Bar-le-Duc by some gentlemen of eminence, to attempt to convert the son of James II. to the Protestant religion, who wished to see him settled on the throne. At Bar-le-Duc he was permitted to discharge the duties of the sacerdotal office, according to the forms of the church of England, where he endeavoured, but in vain, to convert the Pretender. It is the opinion of Lord Bolingbroke, that he was ill used by the Pretender, who not only refused to hear him himself, but sheltered the ignorance of his priests behind his authority, and prohibited all discourse concerning religion. At the close of the reign of Queen Anne, when the partizans of the Pretender were anxious to promote his interest in England, Mr Leslie wrote a letter from Bar-le-Duc, in which he dwelt at large on the graceful mien of the Pretender, his magnanimity of spirit, devotion free from bigotry, application to business, ready apprehension, sound judgement, and affability, so that none conversed with him, who were not charmed with his good sense and temper. In 1715, a rash and ill-digested enterprise took place in Scotland and in the northern parts of England, in favour of the Pretender, which ultimately terminated in the dispersion of the rebels; this obliged him to quit France, and retire to Italy, whither Mr Leslie followed him, and remained in that country till the year 1721. He met with so many difficulties and disappointments at this time, that he determined to return and die in his native country. Some of his friends acquainted Lord Sunderland with his resolution, who generously promised to protect him from the interference of government. On the arrival of Mr Leslie in England, a member of the house of commons waited upon his lordship with the news; but we are happy to inform our readers that he had no great reason to boast of his reception. On Mr Leslie's return to Ireland, he died in 1722, in the month of April, at his own house, in the county of Monaghan.

He was undoubtedly a man of great merit and extensive erudition, distinguished by his piety, humility, and integrity, among whose works are some masterly defences of the Christian religion, against Deists and Jews, and of the Protestant faith against that of the church of Rome. His opinions were rather singular respecting church government, but it must be allowed that he defended them with great ability and acuteness.

LESSER TONE, in *Musick*. See TONE.

LESSINES, a town of the Austrian Netherlands, in Hainault, seated on the river Dender, and famous for its linen manufacture. W. Long. 3. 53. N. Lat. 51. 41.

LESSONS, among ecclesiastical writers, portions of the Holy Scripture, read in Christian churches, at the time of divine service.

Leçons
||
L'Estrange.

In the ancient church, reading the Scriptures was one part of the service of the catechumens; at which all persons were allowed to be present, in order to obtain instruction.

The church of England, in the choice of lessons, proceeds as follows: for the first lesson on ordinary days, she directs, to begin at the beginning of the year with Genesis, and so continue on, till the books of the Old Testament are read over; only omitting the Chronicles, which are for the most part the same with the books of Samuel and Kings, and other particular chapters in other books, either because they contain names of persons, places, or other matters less profitable to ordinary readers.

The course of the first lessons for Sundays is regulated after a different manner. From Advent to Septuagesima Sunday, some particular chapters of Isaiah are appointed to be read, because that book contains the clearest prophecies concerning Christ. Upon Septuagesima Sunday Genesis is begun, because that book which treats of the fall of man, and the severe judgement of God inflicted on the world for sin, best suits with a time of repentance and mortification. After Genesis, follow chapters out of the books of the Old Testament, as they lie in order; only on festival Sundays, such as Easter, Whitunday, &c. the particular history relating to that day is appointed to be read; and on the saints days, the church appoints lessons out of the moral books, such as Proverbs, Ecclesiastes, Ecclesiasticus, &c. as containing excellent instructions for the conduct of life.

As to the second lessons, the church observes the same course both on Sundays and week days: reading the Gospels and Acts of the Apostles in the morning, and the Epistles in the evening, in the order they stand in the New Testament: excepting on saints days and holidays, when such lessons are appointed as either explain the mystery, relate the history, or apply the example to us.

LESTOFF, or LEOSTOFF, a town of Suffolk in England, seated on the sea shore, 117 miles north-east of London. It is concerned in the fisheries of the North sea, cod, herrings, mackerels, and sprats; has a church and a dissenting meeting-house; and for its security, six 18 pounders, which they can move as occasion requires; but it has no battery. The town consists of 500 houses; but the streets, though tolerably paved, are narrow. The coast is there very dangerous for strangers.

L'ESTRANGE, SIR ROGER, a celebrated writer in the 17th century, was descended from an ancient family, seated at Hunstanton-hall in the county of Norfolk, where he was born in 1616, being the youngest son of Sir Hammond L'Estrange, Bart. a zealous royalist. Having in 1644 obtained a commission from King Charles I. for reducing Lynn in Norfolk, then in possession of the parliament, his design was discovered, and his person seized. He was tried by a court-martial at Guildhall in London, and condemned to die as a spy; but was reprieved, and continued in Newgate for some time. He afterwards went beyond sea; and in August 1653 returned to England, where he applied

L'Étrange ||
Letchlade. ||

plied himself to the protector Oliver Cromwell, and having once played before him on the bass viol, he was by some nicknamed *Oliver's fiddler*. Being a man of parts, master of an easy humorous style, but withal in narrow circumstances, he set up a newspaper, under the title of *The Public Intelligencer*, in 1663; but which he laid down, upon the publication of the first London gazette in 1665, having been allowed, however, a consideration by government. Some time after the Popish plot, when the Tories began to gain the ascendant over the Whigs, he, in a paper called the *Observer*, became a zealous champion for the former. He was afterwards knighted, and served in the parliament called by King James II. in 1685. But things taking a different turn in that prince's reign, in point of liberty of conscience, from what most people expected, our author's *Observers* were disused as not at all suiting the times. However, he continued licenser of the press till King William's accession, in whose reign he met with some trouble as a disaffected person. However, he went to his grave in peace, after he had in a manner survived his intellectuals. He published a great many political tracts, and translated several works from the Greek, Latin, and Spanish; viz. Josephus's works, Cicero's Offices, Seneca's Morals, Erasmus's Colloquies, Æsop's Fables, and Bonas's Guide to Eternity. The character of his style has been variously represented; his language being observed by some to be easy and humorous, while Mr Gordon says, "that his productions are not fit to be read by any who have taste or good-breeding. They are full of phrases picked up in the streets, and nothing can be more low or nauseous."

LESTWEITHEL, a town of Cornwall in England, about 229 miles distant from London. It is a well-built town, where are kept the common gaol, the weights and measures for the whole stannary, and the county courts. It stands on the river Foy, which brought up vessels from Fowey, before it was choked up with sand coming from the tin mines, and therefore its once flourishing trade is decayed; but it holds the bushelage of coals, salt, malt, and corn, in the town of Fowey, as it does the anchorage in its harbour. It was made a corporation by Richard earl of Cornwall when he was king of the Romans, and has had other charters since. It consists of seven capital burghesses (whereof one is a mayor), and 17 assistants or common council. It is part of the duchy of Cornwall, to which it pays 11l. 19s. 10d. a year for its liberties. Its chief trade is the woollen manufactory. It first returned members to parliament in the 33d of Edward I. They are chosen by their burghesses and assistants. It was anciently the shire town, and the knights of the shire are still chosen here.

LETCHLADE, a town of Gloucestershire, 90 miles from London, on the borders of Oxfordshire and Berks, and the great road to Gloucester; had anciently a nunnery, and a priory of black canons. In this parish is Clay-hill. The market is on Tuesday; and it has two fairs. It is supposed to have been a Roman town; for a plain Roman road runs from hence to Cirencester; and by a digging in a meadow near it some years ago, an old building was discovered, supposed to be a Roman bath, which was 50 feet long, 40 broad, and 4 high, supported with 100 brick pillars, curiously

inlaid with stones of divers colours of tessellatic work. The Leech, the Coln, the Churn, and Isis, which all rise in the Cotswould hills, join here in one full stream, and become one river, called the *Thames*, which begins here to be navigable; and barges take in butter, cheese, and other goods, at its quay, for London.

LETHARGY, in *Medicine* (from *λεθα, oblivion*, and *αργια, numbness, laziness*), a disease consisting of a profound drowsiness or sleepiness, from which the patient can scarce be awaked; or, if awaked, he remains stupid, without sense or memory, and presently sinks again into his former sleep. See *MEDICINE Index*.

LETHARGY, in *Ferriery*. See *FERRIERY*, N^o 507.

LETHE, (from *λανθανω, "I hide or conceal"*), in the ancient mythology, one of the rivers of hell, signifying oblivion or forgetfulness; its waters having, according to poetic fiction, the peculiar quality of making those who drank them forget every thing that was past.

LETTI, GREGORIO, an eminent Italian writer, was descended of a family which once made a considerable figure at Bologna: Jerom, his father, was page to Prince Charles de Medicis; served some time in the troops of the grand duke as captain of foot; and settling at Milan, married there in 1628. He was afterwards governor of Alimantea in Calabria, and died at Salerno in 1639. Our author was born at Milan in 1630, studied under the Jesuits at Cosenza, and was afterwards sent by an uncle to Rome, who would have him enter into the church; but he being averie to it, went to Geneva, where he studied the government and the religion there. Thence he went to Lausanne; and contracting an acquaintance with John Anthony Guerin, an eminent physician, lodged at his house, made profession of the Calvinist religion, and married his daughter. He settled at Geneva; where he spent almost twenty years, carrying on a correspondence with learned men, especially those of Italy. Some contests obliged him to leave that city in 1679; upon which he went to France, and then to England, where he was received with great civility by Charles II. who, after his first audience, made him a present of a thousand crowns, with a promise of the place of historiographer. He wrote there the History of England; but that work not pleasing the court on account of his too great liberty in writing, he was ordered to leave the kingdom. He went to Amsterdam in 1682, and was honoured with the place of historiographer to that city. He died suddenly in 1701. He was a man of indefatigable application, as the multiplicity of his works show. The principal of these are, 1. The universal monarchy of Louis XIV. 2. The Life of Pope Sixtus V. 3. The Life of Philip II. King of Spain. 4. The Life of the Emperor Charles V. 5. The Life of Elizabeth, Queen of England. 6. The History of Oliver Cromwell. 7. The History of Great Britain, 5 vols 12mo. 8. The History of Geneva, &c.

LETRIM, a county of Ireland. See *LETRIM*.

LETTER, a character used to express one of the simple sounds of the voice; and as the different simple sounds are expressed by different letters, these, by being differently compounded, become the visible signs or characters of all the modulations and mixtures of sounds used to express our ideas in a regular language. See *LANGUAGE*. Thus, as by the help of speech we render

Letter.

render our ideas audible; by the assistance of letters we render them visible, and by their help we can wrap up our thoughts, and send them to the most distant parts of the earth, and read the transactions of different ages. As to the first letters, what they were, who first invented them, and among what people they were first in use, there is still room to doubt: Philo attributes this great and noble invention to Abraham; Josephus, St Irenæus, and others, to Enoch; Bibliander, to Adam; Eusebius, Clemens Alexandrinus, Cornelius Agrippa, and others, to Moses; Pomponius Mela, Herodian, Rufus Festus, Pliny, Lucan, &c. to the Phœnicians; St Cyprian, to Saturn; Tacitus, to the Egyptians; some, to the Ethiopians; and others, to the Chinese: but, with respect to these last, they can never be entitled to this honour, since all their characters are the signs of words, formed without the use of letters; which renders it impossible to read and write their language without a vast expence of time and trouble; and absolutely impossible to print it by the help of types, or any other manner but by engraving, or cutting in wood. See PRINTING.

There have been also various conjectures about the different kinds of letters used in different languages: thus, according to Crinitus, Moses invented the Hebrew letters; Abraham, the Syriac and Chaldee; the Phœnicians, those of Attica, brought into Greece by Cadmus, and from thence into Italy by the Pelasgians; Nicostrata, the Roman; Isis, the Egyptian; and Vulfilas, those of the Goths.

It is probable, that the Egyptian hieroglyphics were the first manner of writing; but whether Cadmus and the Phœnicians learned the use of letters from the Egyptians, or from their neighbours of Judea or Samaria, is a question; for since some of the books of the Old Testament were then written, they are more likely to have given them the hint, than the hieroglyphics of Egypt. But wheresoever the Phœnicians learned this art, it is generally agreed, that Cadmus the son of Agenor first brought letters into Greece; whence, in following ages, they spread over the rest of Europe. See ALPHABET and WRITING.

Letters make the first part or elements of grammar; an assemblage of these compose syllables and words, and these compose sentences. The alphabet of every language consists of a number of letters, which ought each to have a different sound, figure, and use. As the difference of articulate sounds was intended to express the different ideas of the mind, so one letter was originally intended to signify only one sound, and not, as at present, to express sometimes one sound and sometimes another; which practice has brought a great deal of confusion into the languages, and rendered the learning of the modern tongues much more difficult than it would otherwise have been. This consideration, together with the deficiency of all the known alphabets, from their wanting some letters to express certain sounds, has occasioned several attempts towards an universal alphabet, to contain an enumeration of all such single sounds or letters as are used in any language. See ALPHABET.

Grammarians distinguish letters into vowels, consonants, mutes, liquids, diphthongs, and characteristics. They are likewise divided into capital and small letters.

VOL. XI. Part II.

Letter.

They are also denominated from the shape and turn of the letters; and in writing are distinguished into different hands, as round text, German text, round hand, Italian, &c. and in printing, into Roman, Italic, and black letter.

The term LETTER, or *Type*, among printers, not only includes the CAPITALS, SMALL CAPITALS, and small letters, but all the points, figures, and other marks cast and used in printing; and also the large ornamental letters, cut in wood or metal, which take place of the illumined letters used in manuscripts. The letters used in printing are cast at the ends of small pieces of metal, about three quarters of an inch in length; and the letter being not indented, but raised, easily gives the impression, when, after being blacked with a glutinous ink, paper is closely pressed upon it. See the articles PRINTING and TYPE. A fount of letters includes small letters, capitals, small capitals, points, figures, spaces, &c.; but besides, they have different kinds of two-line letters, only used for titles, and the beginning of books, chapters, &c. See FOUNT.

LETTER is also a writing addressed and sent to a person. See EPISTLE.

The art of epistolary writing, as the late translator of Pliny's Letters has observed, was esteemed by the Romans in the number of liberal and polite accomplishments; and we find Cicero mentioning with great pleasure, in some of his letters to Atticus, the elegant specimen he had received from his son of his genius in this way. It seems indeed to have formed part of their education; and, in the opinion of Mr Locke, it well deserves to have a share in ours. "The writing of letters (as that judicious author observes) enters so much into all the occasions of life, that no gentleman can avoid showing himself in compositions of this kind. Occurrences will daily force him to make this use of his pen, which lays open his breeding, his sense, and his abilities, to a severer examination than any oral discourse." It is to be wondered we have so few writers in our own language who deserve to be pointed out as models upon such an occasion. After having named Sir William Temple, it would perhaps be difficult to add a second. The elegant writer of Cowley's life mentions him as excelling in this uncommon talent; but as that author declares himself of opinion, "That letters which pass between familiar friends, if they are written as they should be, can scarce ever be fit to see the light," the world is deprived of what no doubt would have been well worth its inspection. A late distinguished genius treats the very attempt as ridiculous, and professes himself "a mortal enemy to what they call a *fine letter*." His aversion, however, was not so strong, but he knew to conquer it when he thought proper; and the letter which closes his correspondence with Bishop Atterbury is, perhaps, the most genteel and manly address that ever was penned to a friend in disgrace. The truth is, a fine letter does not consist in saying fine things, but in expressing ordinary ones in an uncommon manner. It is the *proprie communia dicere*, the art of giving grace and elegance to familiar occurrences, that constitutes the merit of this kind of writing. Mr Gay's letter, concerning the two lovers who were struck dead with the same flash of lightning, is a masterpiece of the sort; and the specimen he has there

Letter. given of his talents for this species of composition makes it much to be regretted we have not more from the same hand.

Ward's
Oratory.

Of the Style of Epistolary Composition. Purity in the choice of words, and justness of construction, joined with perspicuity, are the chief properties of this style. Accordingly Cicero says: "In writing letters, we make use of common words and expressions." And Seneca more fully, "I would have my letters to be like my discourses, when we either sit or walk together, unstudied and easy." And what prudent man, in his common discourse, aims at bright and strong figures, beautiful turns of language, or laboured periods? Nor is it always requisite to attend to exact order and method. He that is master of what he writes, will naturally enough express his thoughts without perplexity and confusion: and more than this is seldom necessary, especially in familiar letters.

Indeed, as the subjects of epistles are exceedingly various, they will necessarily require some variety in the manner of expression. If the subject be something weighty and momentous, the language should be strong and solemn; in things of a lower nature, more free and easy; and upon lighter matters, jocose and pleasant. In exhortations, it ought to be lively and vigorous; in consolations, kind and compassionate; and in advising, grave and serious. In narratives, it should be clear and distinct; in requests, modest; in commendations, friendly; in prosperity cheerful, and mournful in adversity. In a word, the style ought to be accommodated to the particular nature of the thing about which it is conversant.

Besides, the different character of the person, to whom the letter is written, requires a like difference in the modes of expression. We do not use the same language to private persons, and those in a public station; to superiors, inferiors, and equals. No do we express ourselves alike to old men and young, to the grave and facetious, to courtiers and philosophers, to our friends and strangers. Superiors are to be addressed with respect, inferiors with courtesy, and equals with civility; and every one's character, station, and circumstances in life, with the relation we stand in to him, occasion some variety in this respect. But when friends and acquaintances correspond by letters, it carries them into all the freedom and good-humour of conversation; and the nearer it resembles that, the better, since it is designed to supply the room of it. For when friends cannot enjoy each others company, the next satisfaction is to converse with each other by letters. Indeed, sometimes greater freedom is used in epistles, than the same persons would have taken in discoursing together; because, as Cicero says "A letter does not blush." But still nothing ought to be said in a letter, which, considered in itself, would not have been fit to say in discourse; though modestly perhaps, or some other particular reason, might have prevented it. And thus it frequently happens in requests, reproofs, and other circumstances of life. A man can ask that by writing, which he could not do by words, if present; or blame what he thinks amiss in his friend with greater liberty when absent, than if they were together. From hence it is easy to judge of the fitness of any expression to stand in an epistle, only by considering, whether the

Letter. same way of speaking would be proper in talking with the same person. Indeed, this difference may be allowed, that as persons have more time to think, when they write, than when they speak; a greater accuracy of language may sometimes be expected in one, than the other. However, this makes no odds as to the kind of style; for every one would choose to speak as correctly as he writes, if he could. And therefore all such words and expressions as are unbecoming in conversation, should be avoided in letters; and a manly simplicity, free of all affectation, plain, but decent and agreeable, should run through the whole. This is the usual style of Cicero's epistles, in which the plainness and simplicity of his diction is accompanied with something so pleasant and engaging, that he keeps up the attention of his reader, without suffering him to tire. On the other hand, Pliny's style is succinct and witty: but generally so full of turns and quibbles upon the sound of words, as apparently render it more stiff and affected than agrees with conversation, or than a man of sense would choose in discourse, were it in his power. You may in some measure judge of Pliny's manner, by one short letter to his friend, which runs thus: "How fare you? As I do in the country? pleasantly? that is, at leisure? For which reason I do not care to write long letters, but to read them; the one as the effect of niceness, and the other of idleness. For nothing is more idle than your nice folks, or curious than your idle ones. Farewell." Every sentence here consists of an antithesis, and a jingle of words, very different from the style of conversation, and plainly the effect of study. But this was owing to the age in which he lived, at which time the Roman eloquence was sunk into puns, and an affectation of wit; for he was otherwise a man of fine sense and great learning.

LETTER of Attorney, in Law, is a writing by which one person authorizes another to do some lawful act in his stead; as to give seisin of lands, to receive debts, sue a third person, &c.

The nature of this instrument is to transfer to the person to whom it is given, the whole power of the maker, to enable him to accomplish the act intended to be performed. It is either general or special; and sometimes it is made revocable, which is when a bare authority is only given; and sometimes it is irrevocable, as where debts, &c. are assigned from one person to another. It is generally held, that the power granted to the attorney must be strictly pursued; and that where it is made to three persons, two cannot execute it. In most cases, the power given by a letter of attorney determines upon the death of the person who gave it. No letter of attorney made by any seaman, &c. in any ship of war, or having letters of marque, or by their executors, &c. in order to empower any person to receive any share of prizes or bounty-money, shall be valid, unless the same be made revocable, and for the use of such seamen, and be signed and executed before, and attested by, the captain and one other of the signing officers of the ship, or the mayor or chief magistrate of some corporation.

LETTER of Mart or Marque. See MARQUE.

LETTERS Patent or Overt, are writings sealed with the great seal of England, whereby a man is authorized to do, or enjoy any thing, which, of himself,

Lettuce
||
Leucata.

he could not do. See PATENT.—They are so called by reason of their form; as being open, with the seal affixed ready to be shown for the confirmation of the authority given by them.

LETTUCE. See LACTUCA, BOTANY *Index*; and for the cultivation of the different kinds of lettuce, see GARDENING *Index*.

LEVANT, in *Geography*, signifies any country situated to the east of us, or in the eastern side of any continent or country, or that on which the sun rises.

LEVANT is also a name given to the eastern part of the Mediterranean sea, bounded by Natolia or the Lesser Asia on the north, by Syria and Palestine on the east, by Egypt and Barca on the south, and by the island of Candia and the other part of the Mediterranean on the west.

LEVATOR, in *Anatomy*, a name given to several muscles. See ANATOMY, *Table of the Muscles*.

LEUCA, in antiquity, a geographical measure of length in use among the latter Gauls; which, according to Jornandes, who calls it *leuga*, contained fifteen hundred paces, or one mile and a half. Hence the name of *league*, now reckoned at three miles; in the lower age, called *leuva*.

LEUCADENDRON, a genus of plants belonging to the tetrandria class; and in the natural method ranking under the 48th order, *Aggregatae*. See BOTANY *Index*.

LEUCADIA, formerly called *Neritis*, a peninsula of Acarnania, (Homer); but afterwards, by cutting through the peninsula, made an island, as it is at this day, called *St Maura*.

LEUCAS, in *Ancient Geography*, formerly called *Neritos* and *Neritum*, a town of Leucadia or Leucas; near a narrow neck of land, or isthmus, on a hill facing the east and Acarnania; the foot or lower part of the town was a plain lying on the sea by which Leucadia was divided from Acarnania, (Livy); though Thucydides places Leucas more inward in the island, which was joined to the continent by a bridge. It was an illustrious city, the capital of Acarnania, and the place of general assembly.

LEUCATA, or LEUCATE, in *Ancient Geography*, a promontory of Leucadia, according to Strabo, a white rock projecting into the sea towards Cephalenia, on which stood a temple of Apollo surnamed *Leucadius*. At his festival, which was annually celebrated here, the people were accustomed to offer an expiatory sacrifice to the god, and to avert on the head of the victim all the calamities with which they might be threatened. For this purpose, they made choice of a criminal condemned to die; and leading him to the brink of the promontory, precipitated him into the sea amidst the loud shouts of the spectators. The criminal, however, seldom perished in the water: for it was the custom to cover him with feathers, and to fasten birds to his body, which by spreading their wings might serve to break his fall. No sooner did he touch the sea, than a number of boats stationed for the purpose flew to his assistance, and drew him out; and after being thus saved, he was banished for ever from the territory of Leucadia. (Strabo, lib. x. p. 452).

According to ancient authors, a strange opinion concerning this promontory prevailed for some time among the Greeks. They imagined that the leap of

Leucata was a potent remedy against the violence of love. Hence disappointed or despairing lovers, it is said, were often known to have come to Leucadia; and, having ascended the promontory, offered sacrifices in the temple, and engaged by a formal vow to perform the desperate act, to have voluntarily precipitated themselves into the sea. Some are reported to have recovered from the effects of the fall; and among others mention is made* of a citizen of Buthroton, in Epirus, whose passions always taking fire at new objects, he four times had recourse to the same remedy, and always with the same success. As those who made the trial, however, seldom took any precaution to render their fall less rapid, they were generally destroyed: and women often fell victims to this act of desperation. At Leucata was shown the tomb of Artemisia, that celebrated queen of Caria who gave so many proofs of courage at the battle of Salamis†. Inflamed with a violent passion for a young man who inflexibly refused her love, she surprised him in his sleep and put out his eyes. Regret and despair soon brought her to Leucata, where she perished in the waves notwithstanding every effort to save her‡. Such likewise was the end of the unhappy Sappho. Forsaken by her lover Phaon, she came hither to seek relief from her sufferings, and found her death. (Meaand. ap. Strab. lib. x. p. 452.

LEUCIPPUS, a celebrated Greek philosopher and mathematician; first author of the famous system of atoms and vacuums, and of the hypothesis of storms; since attributed to the moderns. He flourished about 428 B. C.

LEUCOGÆUS, in *Ancient Geography*, a hill situated between Puteoli and Neapolis in Campania, abounding in sulphur; now *Palumera*. Whence there were also springs called *Leucogæi fontes*; the waters of which, according to Pliny, gave a firmness to the teeth, clearness to the eyes, and proved a cure in wounds.

LEUCOJUM, GREAT SNOW-DROP, a genus of plants belonging to the hexandria class; and in the natural method ranking under the ninth order, *Spathaceæ*. See BOTANY *Index*.

LEUCOMA, in antiquity, was a public register amongst the Athenians, in which were inserted the names of all the citizens, as soon as they were of age to enter upon their paternal inheritance.

LEUCOMA, in *Surgery*, a distemper of the eyes, otherwise called *albugo*. See ALBUGO and SURGERY.

LEUCOPETRA, in *Ancient Geography*, so called from its white colour, (Strabo); a promontory of the Brutii, in the territory of Rhegium, the termination of the Apennines; the utmost extremity of the Brutii, or the modern *Calabria Ultra*; as the Japygium is of the ancient Calabria, or the modern Calabria Citra.

LEUCOPETRIANS, in ecclesiastical history, the name of a fanatical sect which sprang up in the Greek and eastern churches towards the close of the 12th century: the fanatics of this denomination professed to believe in a double Trinity, rejected wedlock, abstained from flesh, treated with the utmost contempt the sacraments of baptism and the Lord's supper, and all the various branches of external worship; placed the essence of religion in internal prayer alone; and main-

trained, as it is said, that an evil being, or genius, dwelt in the breast of every mortal, and could be expelled from thence by no other method than by perpetual supplication to the Supreme Being. The founder of this enthushastical sect is said to have been a person called *Leucopetrus*, and his chief disciple Ty-chicus, who corrupted, by fanatical interpretations, several books of Scripture, and particularly St. Matthew's Gospel.

LEUCOPHLEGMATIA, in *Medicine*, a kind of dropsy, otherwise called *anasarca*. See **LEUCOPOTION**, *MEDICINE Index*.

LEUCOTHOE, or **LEUCOTHEA**, in fabulous history, the wife of Athamas, changed into a sea deity; see **INO**. She was called *Miuta* by the Romans. She had a temple at Rome, where all the people, particularly women, offered vows for their brothers children. They did not entreat the deity to protect their own children, because Ino had been unfortunate in hers. No female slaves were permitted to enter the temple; or if their curiosity tempted them to transgress this rule, they were beaten with the greatest severity. To this supplicating for other people's children, Ovid alludes in these lines,

*Non tamen hanc pro stirpe sua pia mater adorat,
Ipsa parum felix visa fuisse parens.* Fast. vi.

LEUCTRA, in *Ancient Geography*, a town of Bœotia, to the west of Thebes, or lying between Plateæ and Thespiæ, where the Lacedemonians had a great defeat given them by Epaminondas and Pelopidas, the Theban generals. The Theban army consisted at most but of 6000 men, whereas that of the enemy was at least thrice that number: but Epaminondas trusted most in his horse, wherein he had much the advantage, both in their quality and good management; the rest he endeavoured to supply by the disposition of his men, and the vigour of the attack. He even refused to suffer any to serve under him in the engagement, but such as he knew to be fully resolved to conquer or die. He put himself at the head of the left wing, opposite to Cleombrotus king of Sparta, and placed the main stress of the battle there; rightly concluding, that if he could break the body of the Spartans, which was but 12 men deep, whereas his own was 50, the rest would be soon put to flight. He closed his own with the sacred band, which was commanded by Pelopidas; and placed his horse in the front. His right, from which he had drawn so many men, he ordered to fall back, in a slanting line, as if they declined to fight, that they might not be too much exposed to the enemy, and might serve him for a corps of reserve in case of need. This was the wise disposition which the two Theban generals made of these few but resolute forces; and which succeeded in every part, according to their wish. Epaminondas advanced with his left wing, extending it obliquely, in order to draw the enemy's right from the main body; and Pelopidas charged them with such desperate speed and fury, at the head of his battalion, before they could reunite, that their horse, not being able to stand the shock, were forced back upon their infantry, which threw the whole into the greatest confusion: so that though the Spartans were of all the Greeks the most expert in recovering from any surprize, yet their skill on this oc-

caſion either failed them or proved of no effect; for the Thebans, observing the dreadful impression they had made on them with their horse, pushed furiously upon the Spartan king, and opened their way to him with a great slaughter.

Upon the death of Cleombrotus, and several officers of note, the Spartans, according to custom, renewed the fight with double vigour and fury, not so much to revenge his death as to recover his body, which was such an established point of honour as they could not give up without the greatest disgrace. But here the Theban general wisely chose rather to gratify them in that point, than to hazard the success of a second onset; and left them in possession of their king, whilst he marched straight against their other wing, commanded by Archidamus, and consisted chiefly of such auxiliaries and allies as had not heartily engaged in the Spartan interest: these were so discouraged by the death of the king and the defeat of that wing, that they betook themselves to flight, and were presently followed by the rest of the army. The Thebans, however, pursued them so closely, that they made a second dreadful slaughter among them; which completed Epaminondas's victory, who remained master of the field, and erected a trophy in memory of it. This was the conclusion of the famed battle of Leuctra, in which the Lacedemonians lost 4000 men, and the Thebans but 300.

LEVEL is an instrument which enables us to find a line parallel to the horizon, or concentric with the circumference of the earth, and to continue it to any distance:—to form a surface exactly level, having all its points at equal distances from the earth's centre, or to find the difference of ascent between several places for the purpose of making roads, conducting water, draining low grounds, rendering rivers navigable, forming canals, &c. &c.

Among the great variety of instruments which have been invented for these purposes, the following are the most important and useful.

Air-LEVEL, that which shows the line of level by means of a bubble of air enclosed with some liquor in a glass tube of an indeterminate length and thickness, whose two ends are hermetically sealed. When the bubble fixes itself at a certain mark, made exactly in the middle of the tube, the plane or ruler wherein it is fixed is level. When it is not level, the bubble will rise to one end. This glass tube may be set in another of brass, having an aperture in the middle, through which the bubble of air may be observed. The liquor with which the tube is filled is oil of tartar, or aqua secunda; these not being liable to freeze as common water, nor to rarefaction and condensation, as spirit of wine is. This application of a bubble of air was the invention of Dr Hooke.

There is one of these instruments made with sights, which is an improvement upon that last described, and which by a little additional apparatus, becomes more commodious and exact. It consists of an air-level, (fig. 1.) about eight inches long, and seven or eight lines in diameter, set in a brass tube 2, with an aperture in the middle, C. The tubes are supported by straight ruler, a foot long; at whose ends are fixed two sights, 3, 3, exactly perpendicular to the tubes, and of an equal height, having a square hole, formed by two fillets of brass

Leuctra,
Level.

Plate
CCXCII.
fig. 1.

Level. brass crossing each other at right angles, in the middle of which is drilled a very small hole, through which a point on a level with the instrument is observed. The brass tube is fastened on the ruler by means of two screws; one of which, marked 4, serves to raise or depress the tube at pleasure, for bringing it towards a level. The top of the ball and socket is rivetted to a little ruler that springs, one end whereof is fastened with a screw to the great ruler, and at the other end has a screw, 5, serving to raise and depress the instrument when nearly level.

The instrument just described, however, is still less commodious than the following one; for though the holes be ever so small, they will take in too great a space to determine the point of level precisely.

The instrument alluded to consists of an air-level, with telescopic sights. This level (fig. 2.) is like the last; with this difference, that, instead of plain sights, it carries a telescope to determine exactly a point of level at a great distance. The telescope is a little brass tube, about 15 inches long, fastened on the same ruler as the level. At the end of the tube of the telescope, marked 1, enters the little tube 1, carrying the eye-glass and a hair placed horizontally in the focus of the object-glass, 2; which little tube may be drawn out, or pushed into the great one, for adjusting the telescope to different sights: at the other end of the telescope is placed the object-glass. The screw 3, is for raising or lowering the little fork, for carrying the hair, and making it agree with the bubble of air when the instrument is level; and the screw 4, is for making the bubble of air, D or E, agree with the telescope: the whole is fitted to a ball and socket. M. Huygens is said to be the first inventor of this level; which has this advantage, that it may be inverted by turning the ruler and telescope half round; and if then the hair cut the same point that it did before, the operation is just.

It may be observed, that one may add a telescope to any kind of level, by applying it upon, or parallel to, the base or ruler, when there is occasion to take the level of remote objects.

Dr Defaguliers contrived an instrument, by which the difference of level of two places, which could not be taken in less than four or five days with the best telescopic levels, may be taken in a few hours. The instrument is as follows. To the ball C (fig. 3.) is joined a recurve tube BA, with a very fine bore, and a small bubble at top A, whose under part is open. It is evident from the make of this instrument, that if it be inclined in carrying, no injury will be done to the liquor, which will always be right both in the ball and tube when the instrument is set upright. If the air at C be so expanded with heat, as to drive the liquor to the top of the tube, the cavity A will receive the liquor, which will come down again and settle at D, or near it, according to the level of the place where the instrument is, as soon as the air at C returns to the same temperament as to heat and cold. To preserve the same degree of heat, when the different observations are made, the machine is fixed in a tin vessel EF, filled with water up to *gh*, above the ball, and a very sensible thermometer has also its ball under water, that one may observe the liquor at D, in each

experiment, when the thermometer stands at the same height as before. The water is poured out when the instrument is carried; which one may do conveniently by means of the wooden frame, which is set upright by the three screws, S, S, S, (fig. 4.) and a line and plummet PP, (fig. 5.) At the back part of the wooden frame, from the piece at top K, hangs the plummet P, over a brass point at N; Mm are brackets to make the upright board KN continue at right angles with the horizontal one at N. Fig. 6. represents a front view of the machine, supposing the fore part of the tin vessel transparent; and here the brass socket of the recurve-tube, into which the ball is screwed, has two wings at II, fixed to the bottom, that the ball may not break the tube by its endeavour to emerge when the water is poured in as high as *gh*.

After the doctor had contrived this machine, he considered, that as the tube is of a very small bore, if the liquor should rise into the ball at A (fig. 3.) in carrying the instrument from one place to another, some of it would adhere to the sides or the ball A, and upon its descent in making the experiment, so much might be left behind, that the liquor would not be high enough at D to show the difference of the level: therefore, to prevent that inconveniency, he contrived a blank screw, to shut up the hole at A, as soon as one experiment is made, that, in carrying the machine, the air in A may balance that in C, so that the liquor shall not run up and down the tube, whatever degree of heat and cold may act upon the instrument, in going from one place to another. Now, because one experiment may be made in the morning, the water may be so cold, that when a second experiment is made at noon the water cannot be brought to the same degree of cold it had in the morning; therefore, in making the first experiment, warm water must be mixed with the cold, and when the water has stood some time, before it comes to be as cold as it is likely to be at the warmest part of that day, observe and set down the degree of the thermometer at which the spirit stands, and likewise the degree of the water in the barometer at D; then screw on the cap at A, pour out the water, and carry the instrument to the place whose level you would know; then pour in your water, and when the thermometer is come to the same degree as before, open the screw at top, and observe the liquor in the barometer.

The doctor's scale for the barometer is ten inches long, and divided into tenths; so that such an instrument will serve for any heights not exceeding ten feet, each tenth of an inch answering to a foot in height.

The doctor made no allowance for the decrease of density in the air, because he did not propose this machine for measuring mountains (though, with a proper allowance for the decreasing density of the air, it will do very well), but for heights that want to be known in gardens, plantations, and the conveyance of water, where an experiment that answers two or three feet in a distance of 20 miles, will render this a very useful instrument.

Artillery Foot LEVEL is in form of a square, having its two legs or branches of an equal length; at a juncture whereof is a little hole, whence hangs a thread and

Level. and plummet playing on a perpendicular line in the middle of a quadrant. It is divided into twice 45 degrees from the middle. Fig. 7.

This instrument may be used on other occasions, by placing the ends of its two branches on a plane; for when the thread plays perpendicularly over the middle division of the quadrant, that plane is assuredly level. To use it in gunnery, place the two ends on the piece of artillery, which you may raise to any proposed height, by means of the plummet, whose thread will give the degree above the level.

4
Carpenters
and Pa-
viers level.

Fig. 8.

5
Gunners
level.

Carpenters and Paviers LEVEL, consists of a long ruler, in the middle of which, is fitted, at right angles, another somewhat larger. At the top of this is fastened a thread, which, when it hangs over a fiducial line at right angles with the base, shows that this base is horizontal. Sometimes this level is composed of one board. See fig. 8.

Gunners LEVEL, for levelling cannons and mortars, consists of a triangular brass plate, about four inches high, (fig. 9.) at the bottom of which is a portion of a circle, divided only into 45 degrees; as this number is sufficient for the highest elevation of cannons and mortars, and for giving that the greatest range. On the centre of this segment of a circle is screwed a piece of brass, by means of which it may be fixed or screwed at pleasure. The end of this piece of brass is made so as to serve for a plummet and index, in order to show the different degrees of elevation of pieces of artillery. This instrument has also a brass foot, to set upon cannons or mortars, so that when those pieces are horizontal, the instrument will be perpendicular. The foot of this level is to be placed on the piece to be elevated, in such a manner, as that the point of the plummet may fall on the proper degree; this is what they call *levelling the piece*.

6
Masons le-
vel.

Masons LEVEL, is composed of three rules, so joined as to form an isosceles triangle somewhat like a Roman A. At the vertex of this triangle is fastened a thread, from which hangs a plummet, that passes over a fiducial line, marked in the middle of the base, when the thing to which the level is applied is horizontal; but declines from the mark, when the thing is lower on the one side than on the other.

7
Plumb or
pendulum
level.

Plumb or Pendulum LEVEL, that which shows the horizontal lines by means of another line perpendicular to that described by a plummet or pendulum. This instrument, (fig. 10.) consists of two legs or branches, joined together at right angles. The branch which carries the thread and plummet is about a foot and a half long; and the thread is hung towards the top of the branch, at the point 2. The middle of the branch where the thread passes is hollow, so that it may hang free everywhere: but towards the bottom, where there is a little blade of silver, on which is drawn a line perpendicular to the telescope, the said cavity is covered by two pieces of brass, making as it were a kind of case, lest the wind should agitate the thread. For this reason the silver blade is covered with a glass G, in order that it may be seen when the thread and plummet play upon the perpendicular. The telescope is fastened to the other branch of the instrument, and is about two feet long; having an hair placed horizontally across the focus of the object-glass, which determines the point of the level. The telescope must be fitted

at right angles to the perpendicular. It has a ball and socket, by which it is fixed to the foot, and was invented by M. Picard.

Level
8

Reflecting LEVEL, that made by means of a pretty long surface of water representing the same object inverted which we see erected by the eye; so that the point where these two objects appear to meet is a level with the place where the surface of the water is found. This is the invention of M. Mariotte.

Mariotte
reflectin
level.

There is another reflecting level consisting of a mirror of steel, or the like, well polished, and placed a little before the object-glass of a telescope, suspended perpendicularly. This mirror must make an angle of 45 with the telescope; in which case the perpendicular line of the telescope is converted into a horizontal line, which is the same with the line of level. This is the invention of M. Cassini.

9
Cassini's.

Water LEVEL, that which shows the horizontal line by means of a surface of water or other liquor; founded on this principle that water always places itself level.

13
Water le-
vel, or ch-
orobates of
the an-
cients.

The most simple water level is made of a long wooden trough or canal, whose sides are parallel to the base; so that being equally filled with water, its surface shows the line of level. This is the chorobates of the ancients. See CHOROBATA.

It is also made with two cups fitted to the two ends of a pipe, three or four feet long, about an inch in diameter, by means of which the water communicates from the one to the other cup; and this pipe being moveable on its stand by means of a ball and socket, when the two cups become equally full of water, their two surfaces mark the line of level.

This instrument, instead of cups, may also be made with two short cylinders of glass three or four inches long, fastened to each extreme of the pipe with wax or mastic. Into the pipe is poured some common or coloured water, which shows itself through the cylinders, by means of which the line of level is determined; the height of the water, with respect to the centre of the earth, being always the same in both cylinders. This level, though very simple, is yet very commodious for levelling at small distances.

De la Hire's level consists of two vessels filled with water, and communicating with each other by means of one or more tubes. A small cylindrical box made of thin copper or planished tin, and terminating below in an obtuse cone, floats in each of these boxes, which are kept in a vertical position by introducing into the cones a ball of lead or a quantity of mercury. One of the boxes carries the object-glass; and the eye-glass along with the cross wires are fastened into the other, but in such a manner as to be elevated or depressed by sliding in two grooves, in order that the axes of the lenses may be exactly level, which is effected by measuring a base. See *Traite du Nivellement par M. Picard*. The inconveniences attending this instrument arise from the difficulty of bringing the floating eye-glass into the same line with the axis of the object-glass, and of making the boxes settle in such a position that distinct vision may be procured through the telescope; for if the wires in the focus of the eye-glass be out of the axis, or at the smallest distance from the focus of the object-glass, the image will be both indistinct and deformed. In order that De la Hire's level

11
De la
Hire's le-
vel.

12
Defects in
De la
Hire's le-
vel.

Level. may be perfect, it is necessary that the boxes should be of the same weight and magnitude, that the boxes which contain the water should be put nearly on a level by means of a plummet, that the same quantity of water should be introduced, and that the object-glass should be kept at the same height with the eye-glass. These conditions, which are requisite to the perfection of the level, are too numerous and too difficult to be attained, to render this instrument of any use where accurate results are required.

13
Couplet's
improvement on De
Hire's
level.
These defects in De la Hire's level were partly remedied by M. Couplet, by inserting the object-glass and eye-glass into the same tube, and by placing this telescope loosely on two boxes which formerly floated at random on the fluid. He equalized the weight of these boxes by means of a quantity of small shot, and verified the instrument by putting one of the boxes beneath the object-glass, and the other beneath the eye-glass of the telescope. It is evident, however, that the accuracy of Couplet's level depends upon the equal distribution of the small shot contained in the boxes; for if it is distributed unequally, the box will be more depressed on one side than another, and consequently the intersection of the cross wires in the focus of the eye-glass, will either recede from, or approach to the surface of the water, according as the small shot is unequally distributed in the box which supports the eye-glass, or in that which carries the object-glass. Besides this source of error, considerable inconvenience must arise in practice from the want of connexion between the telescope and the two boxes upon which it floats.

14
Deparcieux's level.
Plate
CCXIII.
fig. 1.
Fig. 2.
The level of Deparcieux is properly an improvement upon that of Couplet. It consists of two parts, a box ABCD of light wood, in which are placed two vessels of tin EFG, EFG filled with water. These vessels are each 10 inches long, 7 inches wide, and 4½ deep, and communicate by one or more tubes GE. The other part is composed of three tubes M, M, M, and of two boxes L, L, enclosed on all sides, having 8½ inches of length, 6 of breadth, and 4 of depth, and above these are soldered the three tubes. (Fig 1. is a vertical section, and fig. 2. a horizontal section of the instrument). The two outermost tubes are telescopes from 18 to 36 inches long, pointed in opposite directions to prevent the necessity of turning the level, and are necessary for its adjustment and verification.—A piece of lead weighing about two pounds is soldered to the bottom of each box L, L, and a weight P of half a pound is made to move towards Q or R by the screw RQ, in order to adjust the level by making one of the floating boxes sink deeper in the water than the other. This weight should be fixed to a small tin tube which can move easily within the greater one, and the screw is turned by means of a handle similar to that which is used for winding up a clock. The whole instrument is thus covered with a case *ab* to prevent the wind from agitating the water.

15
Method of
adjusting it.
In order to adjust the level, place the box ABCD upon a table, and elevate one end or another by means of wedges till the intersection of the two cross wires in the focus of the eye-glass of one of the telescopes seems to fall upon a very remote object, each of these wires being moveable by screws so that their point of intersection can be varied. Then take the level out of the box ABCD, and invert its position, so that one of the tin

boxes EF may occupy the position which the other had before, and look through the other telescope. If the intersection of the wires falls upon the same object, their position is correct, and the axes of the telescopes are parallel; but if it falls at a distance from the object, the point of intersection must be shifted one-half of that distance towards the object, and the same operation repeated till the intersection of the hairs of one of the telescopes covers the same point of the object that is hid by the intersection of the hairs of the other telescope. When this happens, the axes of the telescopes will be exactly parallel.

The level is then placed upon its stand, which is fixed to the box at K, and a very remote object is examined with one of the telescopes, so as to find the point of it which is hid by the intersection of the wires. The level is then inverted, and the object examined with the other telescope. If the intersection of the wires covers the same point of the object as before, the level is adjusted, and the object is in the line of apparent level passing through the intersection of the wires. But if this is not the case, the weight P towards Q or towards R, according as the point of the object first examined is above or below the intersection of the wires, in order to make the image of the object rise or fall one-half of the distance between the points that are covered by the intersection of the wires in each observation. The operation is then repeated, till the intersection of the wires in both telescopes falls upon the same point of the object, in which case the axes of the telescopes will be exactly level, and the instrument properly adjusted. It is obvious that by moving the weight P from the position which it has when the level is adjusted, the axes of the telescopes will be *inclined* to the line of the level either above or below it according as the weight is moved to one side or another. Hence, by measuring a base with a vertical object at its remote extremity, it may be easily found how many minutes or seconds correspond with a given variation in the position of the weight, merely by measuring the tangents on the vertical object; so that a scale may be engraven on the tube TT which will exhibit the angles of inclination to the line of apparent level, formed by the axes of the telescopes when the weight P has different positions.

16
Keith's
mercurial
level.
Plate
CCXIII.
Fig. 3.
Fig. 4.
The mercurial level lately invented by the ingenious Alexander Keith Esq. of Ravellton, is founded on the same principle as the levels of De la Hire, Couplet, and Deparcieux, with this difference, that mercury is employed instead of water. A section of the mercurial level is represented in fig. 3. where A, A are two oblong square cavities communicating by means of the channel MN. BB are two grooves hollowed out of the wood which contain the sights D, D', fig. 4. when the instrument is not in use. The sight D has a small hole in it, and the other is furnished with a cross hair. They are fixed into two pieces of ivory or hard wood, which are nearly of the same form as the cavities A, A, but a little smaller, so that they may go into these cavities without touching the sides. A quantity of mercury is then introduced into the communicating vessels A, A till they are about half full. The two sights are then placed in the cavities, and float on the horizontal surface of the mercury; consequently (HYDRODYNAMICS, art. 34, 37) if the sights be of the same dimension and weight, a line joining the cross hair in D' and the

small

Level.
Fig. 5.

small hole in D will be level or parallel with the horizontal surface of the mercury. The instrument completely fitted up is represented in fig. 5. where D, D' are the sights, D being the sight to which the eye is applied. When there is a strong wind the level is covered with a case, in which two holes are left opposite to the sights.—The preceding level might be improved by making the cross hair move up and down with a screw, and by engraving a scale on the side of the square aperture at D', whose divisions being subdivided by a scale on the circumference of the nut that moves the screw, would indicate to great accuracy the angle of inclination.

17
Description
of a level
upon a new
principle.
Plate
CCXCIV.
Fig. 1.

The following mode of constructing a level upon a new principle has occurred to the writer of this article. Let AB be a reflecting surface either of glass or water, and let MN be a straight ruler held above this surface; thus it follows from optical principles that the line MN will be perpendicular to the plane AB when the object MN and its image NM' appear in the same straight line to an eye placed at M. Hence, by the bye, we may ascertain the error of a square, by placing one of its sides upon the surface of a looking glass, and applying the eye to its extremity M; for if it is inaccurate, the image of the side MN will form an angle with MN, thus if mN be the side of the square, its image will be N m'. —Now let VV be a vessel containing either water or mercury, and let VV be the surface of the fluid. This vessel must be firmly connected with the base CD and also with the vertical plane EF (perpendicular to CD) by means of the cross bars *a b, c d*. The telescope AB is fastened to MN, another plane which rises perpendicular to the plane EF, and the plane MN is so connected with EF by means of screws, that its side MN may be made to vary its angle with the horizon, in any direction. The vessel VV, therefore, and the planes EF, CD remain fixed, while the telescope AB and the plane MN can vary their position relative to the other parts of the level. The telescope AB should be so constructed as to answer the purpose of two telescopes. It has an object-glass both at A and B, and also an eye-glass with cross wires at A and B; and these are so fitted into the tube that when the eye is applied to the end B, the object glass at B, and the eye-glass at A with its cross hairs, may be turned to one side so as to have distinct vision with the remaining eye-glass at B and the object-glass at A. When the eye is applied to A, the eye-glass at B and the object-glass at A are moved out of the axis of the telescope for the same reason. This contrivance is for the purpose of avoiding the necessity of having two telescopes. The cross hair in the focus of each eye-glass must be made capable of varying their position, so that the point of intersection may be shifted for the purposes of adjustment.

18
Method of
adjusting
it.

In order to adjust the instrument, place its base CD, upon a table, and move the telescope of the index MN till the image N'M' is in the same straight line with MN. Then look through the extremity B at a distant object, and mark the point of it which is covered by the intersection of the wires. Insert the whole instrument so that the end A may be at B, adjust the index MN as before, and look through the telescope at the same object. If the intersection of the wires falls upon the same point of the object as formerly, the instrument is properly adjusted. But if not, the intersection of the

cross wires in one of the eye-pieces must be varied, as in the adjustment of Deparcieux's level, till it covers the same point of the object that was covered at the first observation. When this happens, the instrument is duly adjusted, and may be used by placing the base CD upon a stand, and adjusting the index MN; for when this is done, the axis of the telescope will be in a line accurately horizontal.

Level

LEVEL of Mr Huygens's invention, consists of a telescope *a*, (fig. 11.) in form of a cylinder, going through a ferril, in which it is fastened by the middle. This ferril has two flat branches *b b*, one above, and the other below: at the ends whereof are fastened little moving pieces, which carry two rings, by one of which the telescope is suspended to an hook at the end of the screw 3, and by the other a pretty heavy weight is suspended, in order to keep the telescope in *aequilibrio*. This weight hangs in the box 5, which is almost filled with linseed oil, oil of walnuts, or other matter that will not easily coagulate, for more aptly settling the balance of the weight and telescope. The instrument carries two telescopes close and parallel to each other; the eye-glasses of the one being against the object-glass of the other, that one may see each way without turning the level. In the focus of the object-glass of each telescope must a little hair be strained horizontally, to be raised and lowered as occasion requires by a little screw. If the tube of the telescope be not found level when suspended, a ferril or ring, 4, is put on it, and is to be slid along till it fixes to a level. The hook on which the instrument is hung is fixed to a flat wooden cross; at the ends of each arm whereof there is a hook serving to keep the telescope from too much agitation in using or carriage. To the said flat cross is applied another hollow one, that serves as a case for the instrument; but the two ends are left open, that the telescope may be secured from the weather and always in a condition to be used. The foot of this instrument is a round brass plate, to which are fastened three brass ferrils, moveable by means of joints whereon are put itaves, and on this foot is placed the box.

19
Huygen
level.
Plate
CCXCI

Fig. 12. marked I, is a balance-level; which being suspended by the ring, the two sights, when in *aequilibrio*, will be horizontal, or in a level.

SPIRIT-LEVEL. The most accurate levelling instrument, and that possessed of the greatest essential advantages in use, is the spirit-level; which was first constructed by Mr Sisson, and to which some small additions and improvements have been since made. The following is a description of one of the best of these levels, as made by the principal mathematical instrument makers.

20
Sisson's spi
rit-level.

Fig. 13. is a representation of the instrument mounted on its complete staves. The telescope, ABC, is made from 15 inches to two feet in length, as may be required. It is achromatic, of the best kind, and shows the objects erect. In the focus of the eye-glasses are exceedingly fine cross wires, the intersection of which is evidently shown to be perfectly in the axis of the tube; for by turning it round on its two supporters DE, and looking through the telescope, the intersection of the wires will constantly cut the same part of the object viewed. By turning the screw *a* at the side of the telescope, the object glass at *g* is moved; and thus the telescope is exact-

Adams's
Graphical
Essays.

ly adapted to the eye. If these cross wires are at any time out of their adjustment, which is discovered by their intersection not cutting the same part of the object during the revolution of the telescope on its axis, they are easily adjusted by means of the four screws *bbb*, placed on the telescope about an inch from the end for the eye. These screws act in perpendicular directions to one another, by unscrewing one and tightening the other opposite to the wire, so that if connected with it, it may be moved either way at pleasure; and in this manner the other wire perpendicular to it may be moved, and thus the intersection of the wires brought exactly in the axis of the tube.

To the telescope is fixed, by two small screws *cc*, the level tube containing the spirits, with a small bubble of air: This bubble of air, when the instrument is well adjusted, will settle exactly in the same place, in or near the middle of its tube, whether the telescope be reversed or not on the supporters, which in this case are kept unmoved.

It is evident, that the axis of the telescope, or the intersection of the wires, as before shown, must in this case be truly level. In this easy mode of adjustment consists the improvement of the instrument; and it is hereby capable of being adjusted by only one station and one object, which will at the same time determine it to be in a true level. If by change of weather, accident, or any other cause, the instrument should have lost its level or adjustment, it may thus be readily restored and readjusted at the first station; which is an advantage possessed by none of the instruments formerly made. The two supporters DE, on which the level rests and turns, are shaped like the letter Y. The telescope rests within the upper part of them; and the inner sides of each of these Y's are tangents to the cylindrical tube of the telescope, which is turned to a true cylinder, and each touches it only at one place.

The lower ends of these supporters are inserted into a strong brass plate FE, so as to stand perpendicularly on it. One of these is kept fast by a tightening screw G, and to the other is applied a fine threaded screw H, to adjust the tube, when on its supporters, to a true level. To the supporter D is sometimes applied a line of tangents as far as 12 degrees, in order to take an angle of depression or elevation to that extent. Between the supporters is also sometimes fixed a compass-box I, divided into 360 degrees, and again into four 90°; having a centre pin and needle, and trigger, at *d*, to throw off the needle from the centre when not used; so as to constitute a perfect circumferentor, connected with all the foregoing improvements. This plate is fixed on a conical brass ferrule K, which is adapted to the bell-metal frustum of a cone at top of the brass head of the staves, having a ball and socket, with three bell-metal joints, two strong brass parallel plates LL, four screws *eeee* for adjusting the horizontal motion, a regulating screw M to this motion, and a fastening screw N to tighten it on the cone when necessary. The fastening screw N, and the regulating screw M, by which the whole instrument is moved with accuracy through a small space in a horizontal direction, was an addition of Mr Ramsden's.

The manner of adjusting the spirit-level at the first station.—The whole level being now placed steadily on its staves, it must be rendered parallel to the axis of the

telescope before you adjust the horizontal motion. For this purpose the telescope must be placed in a line with two of the screws *cc*, and then levelled by these till the bubble of air in the spirit-tube keeps its position in the middle, while turned about to three points, making nearly right angles at the centre to one another.

The horizontal motion being thus adjusted, the rims *ff* of the Y's are to be opened, the telescope taken off and laid the contrary way upon the supporters. If the bubble of air then rests exactly the same, the level and telescope are adjusted rightly to one another; but if the bubble does not remain the same, the end to which the air bubble goes must be noticed, and the distance of it from the telescope altered; correcting one half the error by the screws *cc*, and the other half by the screws *ee*.

Now the intersection of the wires being directed to any distant object, it may be one of the vanes of the staves hereafter described: if they continue to be against it precisely while the telescope is turned round on its Ys, it proves, as before mentioned, that the axis of the telescope coincides with the intersection of the wires, and that the instrument will give the true level direction.

The operation of levelling being of a very accurate and important nature, and the best instrument when out of its adjustment being of little use, it is quite necessary that every person using such an instrument should have it readily in his power to correct it; and the one above described appears to be the best adapted for that purpose of any hitherto contrived.

Theory of the Spirit Level.

Let ABC, fig. 3. be a vessel of glass hermetically sealed, its upper surface ABC being the arch of a circle whose centre is O. This vessel contains a quantity of spirit of wine or alcohol, whose level or surface is NEN. The line VOT intersecting the arch Nn in B, and extending to T, which is supposed to be the centre of the earth. Therefore, (HYDRODYNAMICS, art. 36.) the surface NE n is the arch of a circle whose centre is T. XYZ is a right line fixed with respect to the radius B, and consequently with regard to the vessel ABCD. Now let the radius $On = r$ $Tn = R$, and the arch $Bb = m$.

Plate CCXCIV.

In the present situation of the vessel the vertical line VT coincides with the radius BO; but if the position of the vessel is altered till BO takes the situation *b o*, it will then make with VT an angle *OeT*, which we shall suppose $1''$, and which may be supposed equal to the angle *O b T*, as BT may be considered as parallel to *b T*. The angle XVT will now become X'V'T, and will vary by a quantity equal to *O b T*. Then by taking NN', and *nn'* equal to B*b*, the points N' and n' will be determined, which in the new position of the vessel become the points in which the superior surface of the fluid meet the arch ABC.

Now, calling the angle BT $b = \phi$, we have (Euclid. book i. prop. 32.) $BO = b = \phi + 1''$, and $\phi + 1'' : \phi = bT : bO = R : r$, consequently $r = \frac{R\phi}{\phi + 1''}$, and substituting instead of $1''$ and ϕ arcs of the same value, having unity for radius, the product $R\phi$ will be equal to the arc *Ee*, for which we may take B*b* or *m*; and

Level. since (see *Tables de Berlin*, tom. iii. p. 270.) $a'' = 0.000004848137$, we shall have

$r = \frac{m}{0.000004848137 + \phi} = \frac{m}{0.000004848137}$, for BO will be very small compared with ET, and therefore the angle ETe may be neglected in relation to the angle OeT .

Let us suppose for the sake of example that Bb or its equals NN' , nn' , is one-tenth of an inch or 0.0083333 of a foot, thus we shall have the length of the radius BO or $r = \frac{0.008333333}{0.000004848137} = 1736$ feet

nearly; thus a derangement of the vessel ABC which makes the radius BO, or the line XZ, vary a minute of a degree, will make each of the points N, n describe a space of 60 tenths or 6 inches, along the arc ABC, that is the same space which the extremity of a plumb line 1736 feet long, would describe when it moved through one minute of a degree. Hence we are able to render extremely sensible the smallest changes of position in the line XZ. The vessel ABC is nothing more than a spirit level, the line XZ representing the axis of the telescope which is attached to that instrument, as shewn in fig. 13. where cc is the level, and CA the telescope. The glass vessel, which is ground in the inside so as to be a portion of a circle of considerable radius, is almost entirely hid by the cylinder of brass which contains it, excepting a small part which appears in the centre of the cylinder; and the instrument must be so adjusted that when the bubble of air is in the middle of the glass tube, the axis of the telescope, the line XZ, is truly horizontal.

Plate CCXCII.

Plate CCXCIV.

From these remarks, it would seem that a spirit level will measure small angles with the same accuracy as a sector whose radius is equal to BO, fig. 3. the radius of the curvature of the glass tube or of a plumb line of the same length; but there are some causes which diminish its accuracy. When the bubble of air has been brought to the centre of the glass tube, and when the tube, after being deranged, is brought to the very same position, we cannot be sure that the bubble of air will return to the very centre of the tube. This irregularity is produced by the friction of the included fluid against the sides of the tube, and depends on the magnitude of the bubble and the quantity of fluid. In a good level, where the bubble moves about five lines for a minute of inclination, this uncertainty does not exceed half a line, which may be ascertained by pointing the telescope to any object. The coincidence of a plumb line with a particular mark will, on account of the insensible oscillation of the thread, leave an uncertainty of about $\frac{1}{75}$ of a line, that is, about double the uncertainty which is left by the index of a sector, which may be estimated at about 100th of a line. But the radius of a tube, whose bubble moves five lines for a minute of inclination, will be found by a preceding formula to be about 158 feet; and therefore to know the length of a plumb line which will give the same precision, we have $\frac{1}{5} : \frac{1}{75} = 358 : 14.32$ feet, the length required.

On the Construction of Levels.

Level.

Levels are commonly made of glass tubes in the state they are obtained at the glass-house. Of these the straightest and most regular are selected and examined, by filling them nearly with spirit of wine, and ascertaining by trial that side at which the bubble moves most regularly, by equal inclinations of the instrument upon a stage, called the bubble trier, which is provided with a micrometer screw, for that purpose. The most regular side is chosen for the upper part of the instrument, the others being of little consequence to its perfection. Spirit of wine is used, because it does not freeze, and is more fluid than water. Ether is better, because still more fluid (A). The tube and the bubble must be of considerable length. The longer the bubble, the more sensible it is to the smallest inclination. A very small bubble is scarcely sensible, appears as if attached to the glass, and moves but slowly.

In the use of a level of this kind, constructed by *Seur Langlois*, it was remarked, that when it was properly set, in the cool of the morning, it was no longer so in the middle of the day, when the weather became hot; and that when it was again rectified for the middle of the day it became false in the evening, after the heat had diminished. The bubble was much longer in cold than in hot weather, and when longer it was too much so, and could not be kept in the middle of the tube, but stood a little on the one or the other side, though the inclination was precisely the same. These defects were small, and such as claim the notice of careful observers only; but they appeared of too much consequence not to produce a wish to remedy them. It was observed, that they arose from irregularities in the interior surface of the tube; and by examining a great number of tubes, selected for levels of the same kind, there was reason to conclude that all these levels would have more or less of the same defects, because there was not one tube of a regular figure within. They were at best no otherwise cylindrical than plates of glass from the glass-house can be said to be plane before they are ground. The irregularities were easily discernable.

It was therefore concluded, that it would be advisable to grind the inner surfaces of the tubes, and give them a regular cylindrical or rather spindle form, of which the two opposite sides should correspond with portions of circles of very long radius. To accomplish this, a rod of iron was taken, of twice the length of the glass tube, and on the middle of this rod was fixed a stout tube of copper (*cuivre*) of the same length as the tube of glass, and nearly equal in diameter to the bore. The rod was fixed between the centres of a lathe, and the glass gently rubbed on the copper cylinder, with fine emery and water, causing it to move through its whole length. The glass was held by the middle, in order that it might be equally ground, and was from time to time shifted on its axis, as was also the copper cylinder, in order that the wear might be everywhere alike. The operation had scarcely commenced, before

(A) If the ether be not well rectified, it is subject to two great inconveniences in this use. If the tube be very slightly agitated, the ether divides itself into several bubbles, which employ a considerable time before they unite. In the second place, as this ether is decomposed in the course of time; it deposits very small drops of oil, which adhere to the tube, stop the motion of the bubble, and render the level very faulty. The ether is besides more fluid when rectified and freed from a saponaceous matter which causes its bad effects.

Level. before the tube broke; and several others experienced the same misfortune, though they had been well annealed. It was supposed that the emery which became fixed in the copper might contribute to split the glass, each grain continuing its impression with the same point, in the same right line, which in some instances might be as well disposed to cut the glass as diamond. A cylinder of glass was substituted instead of the copper, and the emery rolling itself on the surface of the last, instead of fixing itself, had better success; so that every part of the circumference of the tube and the cylinder touched each other through their whole length. The same operation was continued, using finer and finer emery to smooth the tube, and prepare it for polishing; after which the tube and cylinder having been well washed, thin paper was pasted round the cylinder, and the paper was very equally covered with a small quantity of Venice tripoli. The tube was then replaced and rubbed as before, till it had acquired a polish.

A level thus ground, may be either of the proper sensibility, or be too much or too little sensible. It will be too sluggish, if before grinding, exclusive of the irregularities of the tube, its diameter should much exceed in the middle of the length the diameter of the extremities; or it will be too sensible if this diameter should not sufficiently exceed the other; or lastly, if the middle diameter be smaller than that of the extremes, the bubble will be incapable of continuing in the middle, but will, in every case, either run to one or the other end, or be divided into two parts.

To correct these defects, and to give the instrument the required degree of perfection, it is proper to examine its figure before the grinding is entirely finished. For this purpose, after cleaning it well, a sufficient quantity of spirit of wine must be put into it; and secured by a cork at each end. The tube must then be placed on the forks or Y's of a bubble trier, and its sensibility, or the magnitude and regularity of the space run over by the bubble by equal changes of the micrometer screw, must be ascertained. If the run or spaces passed over be too great, they may be rendered smaller by grinding the tube on a shorter cylinder; but if they be too short, they may, on the contrary, be enlarged, by grinding on a longer cylinder. It is necessary, therefore, to be provided with a number of these cylinders of the same diameter, but of different lengths, which it is advisable to bring to a first figure, by grinding them in a hollow half cylinder of brass. By means of these it will be easy to regulate the tube of the level to any required degree of sensibility, after which the tube may be very quickly smoothed and polished.

The level which was thus ground is one foot in length; and the cylinder on which it was first worked is of the same length. When it was finished it was found to be too sensible. It was therefore worked on another cylinder of between nine and ten inches long, which diminished its sensibility so far, that the bubble, which is nine inches and four lines long, at the temperature of 16° of Reaumur above freezing, is carried from the middle of the tube exactly one line for every second of a degree of inclination. This degree of sensibility was thought sufficient; but any greater degree which may be required may be obtained by the process here described.

It may be remarked that a glass tube is very subject to be split by grinding its inner surface; the same tube

will not be endangered by grinding its external surface even with coarse emery; and when once the polish of the inside is ground off, the danger is over, and coarser emery may be used without fear. Thick glass is more subject to this misfortune than thinner. The coarsest emery made use of in grinding the tube here spoken of was sufficiently fine to employ one minute in descending through the height of three inches in water.

LEVELLING may be defined, the art which instructs us in finding how much higher or lower any given point on the surface of the earth is than another; or, in other words, the difference in their distance from the centre of the earth.

The practice of levelling therefore consists, 1. In finding and marking two or more points that shall be in the circumference of a circle whose centre is that of the earth. 2. In comparing the points thus found with other points, to ascertain the difference in their distances from the earth's centre.

With regard to the theory of levelling, we must observe that a plumb line, hanging freely in the air, points directly towards the centre of the earth; and a line drawn at right angles, crossing the direction of the plumb line, and touching the earth's surface, is a true level only in that particular spot; but if this line which crosses the plumb be continued for any considerable length, it will rise above the earth's surface, and the apparent level will be above the true one, because the earth is globular; and this rising will be as the square of the distance to which the said right line is produced; that is to say, however much it is raised above the earth's surface at one mile's distance, it will rise four times as much at the distance of two miles, nine times at the distance of three, &c. This is owing to the globular figure of the earth; and this rising is the difference betwixt the true and apparent levels; the real curve of the earth being the true level, and the tangent to it the apparent level. Hence it appears, that the less distance we take betwixt any two stations, the truer will be our operations in levelling; and so soon does the difference betwixt the true and apparent levels become perceptible, that it is necessary to make an allowance for it if the distance betwixt the two stations exceeds two chains in length.

Let BD, fig. 4. be a small portion of the earth whose centre is A, then (HYDRODYNAMICS, art. 36.) all the points of this arch will be on a level. But a horizontal line BC meeting the vertical line AD in C, will be the apparent level at the point B; and therefore DC is the difference between the apparent and true level at the point B. The distance CD, therefore, must always be deducted from the observed heights, before we can have the true differences of level, or the difference between the distances of two points from the surface of the earth, or from the centre of curvature A.

In order to find an expression of DC, we have (Euclid, book i. prop. 47.) $AC^2 = AB^2 + CB^2$, and calling $AB=R$, $BC=m$, and $CD=x$, and considering that $AC=R+x$, we have the equation $R^2 + 2Rx + x^2 = m^2 + R^2$. But as the value of the arc DB is always sufficiently small, that CD may be regarded as sufficiently small when compared with AD or AB, we may safely consider x^2 as nothing in the preceding

equation, which in that case becomes $x = \frac{m^2}{2R}$. The

Levelling. Difference between the apparent and true level. Plate CCXCIV.

Levelling. mean value of R may be considered as 19630764 feet, and therefore the value of x may be deduced from the equation $x = \frac{m^2}{2 \times 19630764} = \frac{m^2}{39261528}$, m being expressed in feet. Hence it is obvious, that the depress of the true level is as the square of the distance; and if this distance be 6000 feet, we shall have $x = 0.91698$ of a foot = 11 inches.

The preceding formula supposes the visual ray CB to be a straight line; whereas, on account of the unequal densities of the air at different distances from the earth, the rays of light are incurvated by refraction. This effect has been considered in the following table, which contains the difference between the apparent and true level, both when the refraction of the atmosphere is omitted, and taken into account.

TABLE shewing the Difference between the True and Apparent Levels, whether taking the Terrestrial Refraction into account or not, and marking the Errors that arise when this Refraction is omitted.

Distance in feet.	Elevation of the apparent level above the true level expressed in feet.		Difference between the two elevations.	Distance in feet.	Elevation of the apparent level above the true level expressed in feet.		Difference between the two elevations.

LEVELLING.

Plate CCXCV.

J. B. Smith sculp. fecit.

Levelling. The following is a simple rule for determining the depression of the true level in the practice of levelling.

“Multiply the number of Gunter’s decimal statute chains that are contained in length between any two stations where the levels are to be taken by itself, and the product arising therefrom again by 124, which is a common multiplier for all manner of distances for this purpose on account of the earth’s curvature: then divide the second product arising therefrom by 100,000; or, which is also the same, with the dash of the pen cut off five figures on the right hand side of the product, and what remains on the left side is inches, and the five figures cut off decimal parts of an inch.”

The following is *A Table of Curvature of the Earth*, and shows the quantity below the apparent level at the end of every number of chains to 100.

Chains.	Inches.	Chains.	Inches.	Chains.	Inches.	Chains.	Inches.
1	0.00125	14	0.24	27	0.91	40	2.00
2	0.005	15	0.28	28	0.98	45	2.28
3	0.01125	16	0.32	29	1.05	50	3.12
4	0.02	17	0.36	30	1.12	55	3.78
5	0.03	18	0.40	31	1.19	60	4.50
6	0.04	19	0.45	32	1.27	65	5.31
7	0.06	20	0.50	33	1.35	70	6.12
8	0.08	21	0.55	34	1.44	75	7.03
9	0.10	22	0.60	35	1.53	80	8.00
10	0.12	23	0.67	36	1.62	85	9.03
11	0.15	24	0.72	37	1.71	90	10.12
12	0.18	25	0.78	38	1.80	95	11.28
13	0.21	26	0.84	39	1.91	100	12.50

Levelling is either simple or compound. The former is when the level points are determined from one station, whether the level be fixed at one of the points or between them. Compound levelling is nothing more than a repetition of many simple operations.

An example of simple levelling is given Plate CCXCV. fig. 1. where AB are the station points of the level; CD the two points ascertained. Let the height

	Feet.	Inches.
From A to C be	-	6 0 0
From B to D be	-	9 0 0
The difference	-	3 0 0

shows that B is three feet lower than A.

If the station-points of the level are above the line of sight, as in fig. 2. and the distance from A to C be six feet, and from B to D nine feet, the difference will still be three feet which B is higher than A.

As an example of compound levelling, suppose it were required to know the difference of height between the point A on the river *Zome*, and N on the river *Belann*, fig. 3. (As our author could find no satisfactory examples in any English author, he copied this and the following ones from M. le Febure). In this

operation stakes should be driven down at A and N, exactly level with the surface of the water; and these stakes should be so fixed, that they may not be changed until the whole operation be finished: a plan of the ground between the two rivers should then be made, by which it will be discovered, that the shortest way between the rivers is by the dotted line AC, CH, HN; from whence also the number of stations necessary to be taken will be determined. The operator will also be enabled to distribute them properly according to the nature and situation of the ground. In the figure, 12 stations are marked. Stakes ought then to be driven in at the limits of each station, as A, B, C, D, &c. They ought to be about two or three inches above the ground, and driven 18 inches into it. Stakes should also be driven in at each station of the instrument, as 1, 2, 3, 4, &c.

The operation may be begun in the following manner. Let the first station be at 1, equally distant from the two points A and B, which themselves are distant 166 yards. Write down then in one column the first limit A; in another, the number of feet, inches, and tenths; with the points of sight indicated on the station-staff at A, viz. 7. 6. 0. In the third column, the second limit B; in the fourth, the height indicated at the station-staff B, viz. 6. 0. 0. Lastly, in the fifth column, the distance from one station-staff to the other; which in this case is 166 yards. Remove now the level to the point marked 2, which is in the middle between B and C, the two places where the station-staves are to be held; observing that B which was the second limit in the former operation, is the first in this. Then write down the observed heights as before; in the first column B; in the second 4. 6. 0.; in the third C; in the fourth 5. 6. 2.; in the fifth 560, the distance between B and C.

It being impossible, on account of the inequality of the ground at the third station, to place the instrument in the middle between the two station-staves, find the most convenient point as at 3; then measure exactly how far this is from each station-staff, and you will find that from 3 to C is 160 yards; from 3 to D, 80 yards; and the remainder of the operation will be as in the preceding station.

In the fourth operation, we must endeavour to compensate for any error which might have happened in the last. Mark out, therefore, 80 yards from the station-staff D to the point 4; and 160 yards from 4 to E; and this must be carefully attended to, as by such compensations the work may be much facilitated. Proceed in the same manner with the eight remaining stations, observing to enter every thing in its proper column: and when the whole is finished, add the sums of each column together, and then subtract the lesser from the greater; the difference, which in the present case is 5. 4. 8. shows the ground at N to be thus much lower than the ground at A.

To obtain a section of this level, draw the dotted line *oo*, fig. 4. either above or below the plan; which may be taken for the level or horizontal line. Let fall then perpendiculars upon this line from all the station-points and places where the station-staves were fixed. Beginning now at A, set off 7 feet 6 inches upon the line from A to *a*: for the height of the level-point determined on the staff at this place, draw a line through

Leveling. *a* parallel to the dotted line *oo*, which will cut the third perpendicular at *b*, the second station-staff. Set off from this point downwards six feet to *B*, which shows the second limit of the first operation; and that the ground at *B* is one foot six inches higher than at *A*: place your instrument between these two lines at the height of the level line, and trace the ground according to its different heights. Now set off, on the second station-staff *B*, four feet six inches to *C*, the height determined by the level at the second station: and from *C* draw a line parallel to *oo*, which will cut the fifth perpendicular at *d*, the third station-staff. From this point set off 5 feet 6 inches $\frac{6}{10}$ downwards to *C*, which will be our second limit with respect to the preceding one, and the third with respect to the first. Then draw your instrument in the middle between *B* and *C*, and delineate the ground with its inequalities. Proceed in the same manner from station to station, till you arrive at the last *N*, and you will have the profile of the ground over which the level was taken.

This method answers very well where only a general profile of the different stations is required; but where it is necessary to have an exact detail of the ground between the limits, we must then go to work more particularly. Suppose, therefore, the level to have been taken from *A* to *N* by another route, but on more uniform ground, in order to form a canal marked *O, P, Q, R, S, T, U, X, Y*. Draw at pleasure a line *Z, Y*, fig. 5. to represent the level, and regulate the rest; then let fall on this line perpendiculars to represent the stakes at the limits of each station, taking care that they be fixed accurately at their respective distances from each other. The difference between the extreme limits, in this case, ought to be the same as in the former, viz. 5 feet 4 inches $\frac{6}{10}$. Set off this measure upon the perpendicular *o* the first limit; and from *o*, prolonging the perpendicular, mark off at *a* the height determined at the first station-staff; then do the same with the second and third, and so on with the following, till this part of the work is finished; there remains then only to delineate in detail the ground between the station-staves, the distances in this example being assumed larger on account of the detail.

To obtain the section of the ground between *O* and *P*, place your instrument at one of the limits, as *P*, fixing it so that the cross hairs may answer to the point *C*; then look towards the first limit *o*, raising or depressing the vane till it coincides with the intersection of the cross hairs; and the line of sight from one point to the other will mark the level or horizontal line.

To set off the height of the brink of the river above the first limit, drive a stake down close to the ground at *a*; and place your station-staff upon it, observing where the hairs intersect the vane, which will be at 4 feet 10 inches; then laying off upon the line *oo* the distance from the first to the last stake, let fall from thence a perpendicular, and set off thereon 4. 10. 0. to *a*, which gives the height at the first stake; or, which is the same, the height from the edge of the river above the surface of the water, as is evident from the section. Drive a second stake at *b*, in a line between the limits; place the station staff upon this stake, and observe the height 4. 6. intersected by the cross hairs, the instrument still remaining in the same situation. Set off on the level line the distance from the first stake *a*

to the second *b*: and then let fall a perpendicular, and mark upon it 4. 6 to *b*, which gives the height of the ground at this place.

The small hollow *c* is marked out by driving down a third stake even with the ground, in the middle of it at *c*; but the exact distance of the second stake *b* from the third *c*, must be marked upon the level line: then let fall a perpendicular from *c*, and set off upon it 6. 8. 0, pointed out by the cross hairs on the staff, which determines the depth of the hollow, as appears from the figure. As the distances between the stakes are now very short, they can easily be marked by the operator, who can settle any little inequalities by a comparison with those already ascertained. Proceed thus with the other stations till you arrive at the last, and you will always obtain an accurate section of your work; by which it is easy to form a just estimation of the land to be dug away, in order to form the canal, by adding the depth to be given to it.

Fig. 6. gives an example of compound levelling, where the situation is so steep and mountainous, that the stakes cannot be placed at equal distances from the instrument, or where it is even impossible to make a reciprocal levelling from one station to the other.— Thus suppose the point *K* to be the bottom of a balon where it is required to make a fountain, the reservoir being at *A*; so that, in order to know the height to which the jet d'eau will rise, it is necessary to know how high the point *A* is above *K*.

In great heights such as this, it will be necessary to proceed by small descents, as from *A* to *D*. The instrument must be adjusted with all possible care; and it will even be proper, in some part of the work, to use a smaller instrument. The following is a table of the different operations used in making this level, it having been taken from M. le Febure's practice.

	Feet. In.		Feet. In.	Yards.
A	21 6	C	0 9	90
C	4 3	D	0 3	40
D	3 9	E	16 3	350
E	5 0	F	17 9	250
F	10 6	G	5 0	375
G	5 0	H	19 0	300
H	5 0	K	47 3	1000
	55 0		106 3	2405

In this case only two levellings are made between *A* and *D*, though more would have been necessary; but they are omitted to avoid confusion. In the fourth station the height found was 16 feet 8 inches; but on account of the great length, it was requisite to reduce the apparent level to the true one, which is always necessary where the length is considerable. At the last limit we get the height from *N* to *o*; then from *o* to *I*; from *I* to *K*, fig. 7. &c.; all which added together, and then corrected for the curvature, gives 47 feet 3 inches. Now, by adding each column together, and subtracting one from the other, we have 51 feet 9 inches for the height which the point *A* is above the bottom of the balon, and which will cause the jet d'eau to rise about 45 feet. The general section of this operation is shown at fig. 7. 8. but

Leveling. but an exact profile of the mountain is more difficult, as requiring many operations; though some of these might be obtained by measuring from the level line without moving the instrument.

The last example given by our author is likewise from M. le Febure, and includes a length of near five German miles (25 of ours) in a straight line, and 9 or 10 (45 or 50 English) including the turnings and windings. In this the declivity of the river *Haynox* was measured from Lignebruk to Villebourg. The first operation was to drive stakes at several parts of the river even with the water's edge; the first of which a little above the mills of Lignebruk showed the upper water-mark, and another showed the lower water-mark at the same mills. Two stakes above and below the mills of Maxurance, somewhat more than half way between Lignebruk and Villebourg, pointed out the difference between high and low water there, and formed likewise the third and fourth limits of the operation; while the stakes above and below the mills of Villebourg pointed out the difference between high and low water, and likewise formed the last limits of the operation.

These marks were all made at the edge of the water, exactly even with its surface, and all made at the different parts of the river nearly at the same instant of time. "The principal limits of the levelling (says Mr Adams) being now determined and fixed, it only remains to find the level between the limits, according to the methods already pointed out, using every advantage that may contribute to the success of the work, and at the same time avoiding all obstacles and difficulties that may retard or injure the operations. The first rule is always to take the shortest possible way from one limit to another, though this rule ought not to be followed if there are considerable obstacles in the way, as hills, woods, marshy ground, or if, by going aside, any advantage can be obtained." In the present case it was found necessary to deviate very considerably from the general rule, in order to take in several ponds, the surfaces of which might all be taken for a perfect level; and thus levels were frequently taken across the country for a considerable way. The difference of height between the mills of Lignebruk and Villebourg was at last found to be about 19 feet, indicating a descent of not quite a foot in a mile.

LEVELLING-STAVES, instruments used in levelling, serving to carry the marks to be observed, and at the same time to measure the heights of those marks from the ground. They usually consist of two mahogany staves ten feet long, in two parts, that slide upon one another to about $5\frac{1}{10}$ feet, for the more portable carriage. They are divided into 1000 equal parts, and numbered at every tenth division by 10, 20, 30, &c. to 1000; and on one side the feet and inches are also sometimes marked.

A vane *A* slides up and down upon each set of these staves, which by brass springs will stand at any part. These vanes are about 10 inches long and 4 inches broad; the breadth is first divided into three equal parts, the two extremes painted white, the middle space divided again into three equal parts, which are left; the middle one of them is also painted white, and the two other parts black; and thus they are suited to all the common distances. These vanes have each

a brass wire across a small square hole in the centre, which serves to point out the height correctly, by coinciding with the horizontal wire of the telescope of the level.

Leven
||
Levite.

LEVEN, a river of Lenox or Dunbartonshire in Scotland. See **LENEX**.

LEVER, in *Mechanics*, is a bar of iron or wood, one part of which being supported by a prop, all other parts turn upon that prop as their centre of motion. This instrument is of two kinds. First, the common sort, where the weight we desire to raise rests at one end of it, our strength is applied at the other end, and the prop is between both. When we stir up the fire with a poker, we make use of this lever; the poker is the lever, it rests upon one of the bars of the grate as a prop, the incumbent fire is the weight to be overcome, and the other end held in the hand is the strength or power. In this, as in all the rest, we have only to increase the distance between the strength and prop to give the man that works the instrument greater power.

The lever of the second kind has the prop at one end, the strength is applied to the other, and the weight to be raised rests between them. Thus in raising the water-plug in the streets, the workman puts his iron lever through the hole of the plug till he reaches the ground on the other side, and, making that his prop, lifts the plug with his strength at the other end of the lever. In this lever also, the greater the distance of the prop from the strength, the greater is the workman's power.

These instruments, as we see, assist the strength; but sometimes a workman is obliged to act at a disadvantage, in raising either a piece of timber or a ladder upon one end. We cannot, with grammatical propriety, call this a *lever*, since such a piece of timber in fact in no way contributes to raise the weight. In this case, the man who is the strength or power, is in the middle, the part of the beam already raised is the weight, the part yet at the ground is the prop on which the beam turns or rests. Here the man's strength will be diminished in proportion to the weight it sustains. The weight will be greater the farther it is from the prop, therefore the man will bear the greater weight the nearer he is to the prop. See **MECHANICS**.

LEVERET, among sportsmen, denotes a hare in the first year of her age.

LEVIGATION, in *Pharmacy* and *Chemistry*, the reducing hard and ponderous bodies to an impalpable powder, by grinding them on a porphyry, or in a mill.

LEVITE, in a general sense, means all the descendants of Levi, among whom were the Jewish priests themselves, who, being descended from Aaron, were likewise of the race of Levi. In a more particular sense, *Levite* is used for an order of officers in that church, who were employed in performing the manual service of the temple. They were obedient to the priests in their ministrations, and brought them wood, water, and other necessaries for the sacrifice.—They sung and played upon instruments in the temple and in other places. They applied themselves to the study of the law, and were the ordinary judges of the country, but always subordinate to the priests. Their subsistence was the tithes of corn, fruit, and cattle, through

Leviticus
||
Leuwen-
hoek.

throughout Israel: but the priests were entitled to a tenth of their tithes, by way of first fruits to the Lord. Eight and forty cities were assigned for the residence of the Levites, of which the priests claimed thirteen, six whereof were chosen for cities of refuge. They were consecrated, before they entered upon their ministry, by shaving their flesh, washing their clothes, and sprinkling with the water of expiation. Imposition of hands was used in consecration, and two bullocks were offered at the door of the tabernacle. They waited weekly, and by turns, in the temple, beginning their attendance on one sabbath and ending the next: During this time they were maintained out of the offerings, &c. In the time of Solomon, the number of Levites, from the age of 20, and capable of serving, was 30,000.

LEVITICUS, a canonical book of the Old Testament, so called from its containing the laws and regulations relating to the priests, Levites, and sacrifices.

LEVITY, in physiology, the privation or want of weight in any body when compared with another that is heavier than it; in which sense it stands opposed to gravity.

LEUK, a town of Switzerland, almost in the middle of the Valais; remarkable for its natural strength, for the assembly of the states that often meet there, and for its baths, whose water is so hot that it will boil eggs.

LEUSDEN, JOHN, a celebrated philologer, born in 1624. He studied the learned languages and mathematics at Utrecht; and then went to Amsterdam, to converse with the rabbis, and perfect himself in the Hebrew tongue. After which he was professor of Hebrew at Utrecht, where he acquired a great reputation, and died in 1699. He wrote many valuable works; the principal of which are, 1. *Onomasticum Sacrum*, 8vo. 2. *Clavis Hebraica et Philologica Veteris Testamenti*, 4to. 3. *Novi Testamenti Clavis Græca, cum Annotationibus Philologicis*, 8vo. 4. *Compendium Bibliæ Veteris Testamenti*, 8vo. 5. *Compendium Græcum Novi Testamenti*; the best edition of which is that of London, in 1668, 12mo. 6. *Philologus Hebræus*, 4to. 7. *Philologus Hebræo mixtus*, 4to. 8. *Philologus Hebræo-Græcus*, 4to. 9. Notes on Jonas, Joel, Hosea, &c. He also gave correct editions of several learned works.

LEUTKIRK, a free and imperial town of Germany in Suabia, and in Algow, seated on a rivulet that falls into the Illar, in E. Long. 10. 10. N. Lat. 47. 53.

LEUTMERITZ, a town of Bohemia, capital of a circle of the same name, with a bishop's see, seated on the river Elbe, in E. Long. 14. 25. N. Lat. 50. 34.

LEUWENHOEK, ANTONY, a celebrated Dutch philosopher, was born at Delft in 1632, and acquired an extensive reputation all over Europe, by means of his discoveries and experiments in natural history, which were made by him with the microscope. He particularly excelled in making glasses for microscopes and spectacles; and he was a member of most of the literary societies of Europe, to which he sent a number of valuable memoirs. Those in the Philosophical Transactions and in the Paris Memoirs, extend through many volumes; the former were extracted and published at

Leiden, in 1722. He died in 1723, at 91 years of age.

LEVY, in Law, signifies to gather or collect; as to levy money, and to levy a fine of lands in the passing a fine.

LEWARDEN, a handsome, rich, and strong town of the United Provinces, capital of Otergow, Westergow, Sevenwolden, and West Friesland. It was the usual place of residence of the Stadtholder; and in buildings, as well public as private, is very magnificent. It has several canals running through the streets, which are of great service to their trade, especially as they are continued to the sea and to the most considerable towns of the province. E. Long. 5. 42. N. Lat. 53. 12.

LEWDNESS. See FORNICATION.—Lewdness is punishable by our law by fine, imprisonment, &c. And Mich. 15 Car. II. a person was indicted for open lewdness, in showing his naked body in a balcony, and other misdemeanors; and was fined 2000 merks, imprisoned for a week, and bound to his good behaviour for three years. 1 Sid. 168. In times past, when any man granted a lease of his house, it was usual to insert an express covenant, that the tenant should not entertain any lewd women, &c.

LEWENTZ, a town of Upper Hungary, in the county of Gran, and on the river of the same name, where the Turks were defeated in 1644. E. Long. 18. 19. N. Lat. 48. 15.

LEWES, a large well built town of Suffex, in England, seated on an eminence on the banks of the Ouse, 50 miles from London. It is famous for a bloody battle fought near it, wherein King Henry III. was defeated and taken prisoner by the barons; and is so ancient, that we read the Saxon king Athelstan appointed two mint-houses here, and that in the reign of Edward the Confessor it had 127 burgesses. It is a borough by prescription, by the style of constables and inhabitants. The constables are chosen yearly. It has handsome streets and two suburbs, with six parish churches. It carries on a great trade; and the river Ouse runs through it, which brings goods in boats and barges from a port 8 miles off. On this river are several iron-works, where cannon are cast for merchant ships, besides other useful works. A charity-school was opened here in 1711, where 20 boys are taught, clothed, and maintained, at the expence of a private gentleman, by whom they were also furnished with books; and 8 boys more are taught here at the expence of other gentlemen. Here are horse-races almost every summer for the king's plate of 100l. The roads here are deep and dirty; but then it is the richest soil in this part of England. The market here is on Saturday; and the fairs May 6. Whitsun-Tuesday, and October 2. The timber of this part of the county is prodigiously large. The trees are sometimes drawn to Maidstone and other places on the Medway, on a sort of carriage called a *tug*, drawn by 22 oxen a little way, and then left there for other tugs to carry it on; so that a tree is sometimes two or three years drawing to Chatham; because, after the rain is once set in, it stirs no more that year, and sometimes a whole summer is not dry enough to make the roads passable. It is cheap living here; and the

Levy
||
Lewes.

Lewis.

town not being under the direction of a corporation, but governed by gentlemen, it is reckoned an excellent retreat for half-pay officers, who cannot so well confine themselves to the rules of a corporation. It sends two members to parliament.

LEWIS, one of the largest of the Hebrides or Western islands of Scotland, extending about 60 miles in length from north to south, and from 13 to 14 in breadth, consisting of a great number of isles and rocks, and parted by the sea into two divisions, called *Lewis* and *Harries*, the former lying to the westward of the other. Lewis belongs to the shire of Ross; is divided by several channels, distinguished by several names, and portioned out among different proprietors; but the *Lewis*, strictly so called, stretches about 36 miles in length, from the north point of Bowling-head to the southern extremity of Hulfiness in Harries. The air is temperately cold, moist, and healthy; great part of the low ground is flooded with lakes; the rest is arable in many places, and has been counted fruitful in oats, barley, rye, flax, and hemp. The soil in these parts is a light sand, which the inhabitants manure with foot and sea-ware; but great part of the island is covered with heath. The labouring people dig the land with spades, and break the clods with small harrows, the foremost teeth of which are made of wood, and the remainder of rough heath, which smooths what the others have broken; and this harrow is drawn by one man, having a strong trace of horse-hair across his breast. Of their corn they not only make malt for ale, but likewise a strong spirit called *trellareg*, which is the whisky, or usquebaugh, three times distilled. Lewis abounds with convenient bays and harbours, in which are caught, in great plenty, cod, ling, and herring: here are likewise whales of different sizes, which the natives drive into the bays, and kill with harpoons. These bays afford great plenty of shell-fish, such as clams, oysters, cockles, muscles, limpets, welks, and such a prodigious quantity of spout-fish is sometimes cast up from the sand off Lochtua, that they infect the air, and render it unhealthy to the neighbouring inhabitants, who are not able to consume them, either by eating, or using them as manure for the ground. Some of these lochs and bays likewise produce small coral and coralline. The fresh-water lakes are well stored with trout and eels, and the rivers yield plenty of salmon. Along the coast are found a great number of caves, which serve as shelter for the seals and otters, which are also eaten as dainties by the inhabitants; and vast numbers of sea-fowl build upon the rocks and promontories.

The land animals reared in this island, are cows, horses, sheep, goats, hogs, and deer; all these are of a diminutive size. The beef, mutton, and pork, are juicy and delicious; the horses are active and hardy; the deer, which are of the red kind, confine themselves to the chase of Oservaul, about 15 miles in compass, which affords tolerable pasturage; but in the winter, when the ground is covered with frost and snow, these animals are forced to feed on sea-ware, and endure all the rigour of the season, without any shelter from wood or copse, for there is not a tree to be seen; nevertheless, the roots of very large trees, which have been cut by the axe, are found in different places.

VOL. XI. Part II.

There is likewise a small grove of birch and hazel on the south-west side of Loch Stornaway.

Lewis.

The inhabitants of Lewis are well-proportioned, tall, fair, sanguine, strong, and healthy. They are in general sober, circumspect, and hospitable; dexterous in shooting, swimming, and leaping; bold and skilful mariners; and so temperate, that they will tug at the oar all day, without any other provision than bread and water, with a snuff of tobacco.

Along this coast we see several natural mounts, or forts, called *Duns*; such as Dun-rowly, Dun-coral-el, and Dun-eilen. There are also the remains of some old castles, and other monuments of antiquity. At Stornaway village we see the ruins of a fortress destroyed by the English garrison sent thither by Oliver Cromwell. To the northward of Braço there is a round tower built of large stones, three stories high, tapering towards the top, with a double wall, and a circular staircase between, by which one may go quite round the building. On the heaths and summits of hills there are several cairns or heaps of stones, which served either for graves or beacons. In the parish of Barvas we see a single stone called the *thrusbel*, standing upright, above 20 feet high, and almost as much in breadth. Three stones, about 12 feet high each, are seen standing on the north side of Loch Carlvay; and many others standing single at great distances, and in remote parts of the island. But the most remarkable monument of this kind appears by the village of Claferniss. Here we find 39 pyramidal stones standing upright, about six or seven feet high from the surface, each about two feet in breadth. They are placed in form of an avenue, eight feet wide; the distance between every stone amounting to six feet, and a single piece stands at the entrance. This avenue leads to a circle of 12 stones of the same dimensions, with one in the centre 13 feet in length, and shaped like a rudder: on the east, south, and west sides of this circle, are four stones, such as those that compose this round and avenue, forming three lines, or as it were rays from the body of the circle. This is supposed to have been a Druid temple; and tradition reports, that the chief Druid stood by the large stone in the centre, and harangued the audience. At the distance of a quarter of a mile there is another circle of the same nature; but without the range and avenue. In all probability, these, as well as the monuments we have described in our account of the Orkneys, and Stonehenge on Salisbury plain, were places of worship erected by the Druids in time of Pagan superstition. The chief town in Lewis is STORNAWAY.

There is a considerable number of inferior adjacent isles and rocks, some of which hardly deserve to be mentioned: such as the small island Garve at the mouth of Loch Carlvay, Beinsay, Fladda, Bernera Minor and Bernera Major, Kialisay, Cavay, Cavay, Grenim, Pabay, Shirem, Vexay, Wuya the Larger and Lesser, and the Flannan islands, which the seamen denominate the *northern hunters*. These are visited every summer by the inhabitants of the Lewis, who go thither in quest of fowls, eggs, down, quills, and feathers, as well as to shear or kill the sheep that are kept here for pasture. As these islands are very steep and rocky, the visitors, after having landed and

5 G

climbed

Lewis climbed up the rock by a ladder, uncover their heads, and, making a turn sun-ways, thank God for having escaped the danger they have undergone. In the largest island are the ruins of a chapel dedicated to St Flannan, from whom the isles derive their name. Thither the fowlers repairing, strip themselves of their upper garments, which being laid upon a stone, they advance towards the altar, and repeat three prayers; an exercise which is performed every morning and evening. They observe many other superstitious customs during their residence on these rocks; and when they have landed their boat with their purchase, return to the larger islands. Among the islands belonging to the Lewis, we may likewise take notice of the small isle of Pigmies, so called, because, it is said, bones resembling those of human creatures, but of very small dimensions, have been dug out of the ground.

The island of Lewis is divided into the two parishes of Barvas and Eye, and in each of these one minister is settled; but there is a great number of churches and chapels dedicated to different saints, in the different isles which compose this cluster. All these were sanctuaries before the Reformation, but now they are divested of that privilege. The people of these islands are Presbyterians, with a few Protestants of the English communion, and a still smaller number of Roman Catholics. The Protestants observe the festivals of Christmas, Good Friday, Easter, and Michaelmas; on the last of which the individuals of both sexes perform an anniversary cavalcade.

LEWIS, or *Louis*, the name of several kings of France. See FRANCE.

LEWIS VII. anno 1137, was the first who had the courage to oppose the encroachments of the popes on the regal authority: Pope Innocent II. excommunicated him for appointing an archbishop of Bourges; but Lewis defended his prerogatives, and put the priests to death who had been the authors of the quarrel. In 1147, he put himself at the head of an army of 80,000 men, and marched against the Saracens, in the second crusade, but was defeated; and returning into France by sea, was taken by the Greeks, but rescued by Roger king of Sicily. His queen Eleonora accompanied him in this expedition; and being suspected of infidelity with Saladin, a young Turk, Lewis divorced her, and she was married six weeks after to Henry duke of Normandy, (Henry II. king of England). Lewis died in 1180, aged 60.

LEWIS IX. anno 1226 (canonized), was one of the greatest monarchs of France, equally memorable for his valour and his virtues; but, unfortunately misled by the superstition of the times, he sacrificed his own repose, and the welfare of his kingdom, to the folly of crusading. In 1248, leaving France to the care of his mother, he embarked for Egypt, attended by his queen, his three brothers, and the flower of the French nobility. At first his victories were rapid; he took Damietta in 1249; but the following year he was defeated and taken prisoner by the Turks, with all the nobility in his train, and the greatest part of his army. The sultan sent to him in prison, to demand an exorbitant sum for his ransom; and his answer being truly noble, deserves to be recorded: "Tell the sultan, that a king of France is not to be ransomed with money; I will give the sum required for

my people, and Damietta for myself." These terms were accepted, and a peace of ten years ensued. Upon his return to France, he diminished the taxes, revoked those which the cupidity of the financiers had introduced; issued several salutary edicts; founded several churches and hospitals; and effectually overturned the ecclesiastical jurisdiction of the court of Rome, by his pragmatic sanction in 1269, which established the independency of the Gallican church. Thirteen years residence in his capital indemnified his subjects for his absence; but his pious zeal prevented the enjoyment of this happiness: he embarked for the sixth crusade in 1270; and died the same year, at the siege of Tunis, aged 55.

LEWIS XI. anno 1461. His oppressions obliged his subjects to enter into a league against him, styled "*Ligue de bien publicq*," in which his brother the duke of Berri and some of the principal nobility were concerned: they solicited succours from John duke of Calabria, who joined them with 500 Swiss (the first introduction of Swiss soldiers into the French armies.) His reign was almost one continued scene of civil war; and it is computed, that 4000 of his subjects were executed in public and privately, either for being in arms against him, or suspected by him. In his last illness, he drank the warm blood of children, in the vain hope of restoring his decayed strength. He died in 1483, aged 60. The posts for letters were established in his reign, owing to his eagerness for news; the first institution of this nature in Europe.

LEWIS XII. anno 1492, styled *the Just*, and *the Father of his people*; memorable for his valour in the field, and his wisdom in the cabinet. A great general; but unfortunate towards the end of his reign, when he did not command his troops in person: his orders transmitted from home were misunderstood, or wilfully disobeyed; and he had the mortification, before he died, to see the total expulsion of the French from the possessions he had acquired for them by his personal bravery. At 53 years of age, he married the princess Mary of England, sister of Henry VIII. and being of a delicate constitution, fell a victim (according to the French historians) to amorous dalliance; for he died in about two months after his nuptials, in 1515.

LEWIS XIII. anno 1610, increased the military reputation of his country, and made considerable additions to its domains. The beginning of his reign was occupied in civil wars with his mother and his Protestant subjects; in which he was excited to continue by his famous minister Cardinal Richelieu, who attended him to the siege of Rochelle, the bulwark of the Huguenot party. This place was reduced by famine to surrender, in 1628, after a siege of more than a year. Upon this and other occasions, the king gave proofs of great personal bravery. His attachment to his ally the duke de Nevers, who succeeded to the duchy of Mantua, but was refused the investiture by Charles VI. emperor of Germany, involved him in a war with that prince, the Spaniards, and the duke of Savoy; in which Lewis was victorious; and obtained a treaty of peace, by which the duke of Mantua was guaranteed in the possession of his dominions. In 1635, a new war broke out between France and Spain, and the emperor took part with the latter: it lasted, 13 years against the emperor, and 25 against Spain, with various

Lewis,
Lex.

various success; and the different armies kept on foot in the Low Countries, on the frontiers of France, and in Italy, in the first years of this war, paved the way for the signal successes of Lewis XIV. the campaigns of these armies being a military school of discipline and experience for the French officers, besides giving them a knowledge of the countries which became the seat of war in the next reign. Lewis XIII. died 1643, aged 41.

LEWIS XIV. *le Grand* (king at five years of age), anno 1643. He was at first styled *Dieu-donne*, because the French considered him as the gift of heaven, granted to their prayers after the queen had been barren 22 years. This princess (Anne of Austria) was declared regent by Lewis XIII. and saw herself under a necessity to continue the war against Philip IV. king of Spain, her brother. The duke d'Enghien was made general of the French armies; and so signal was the success of this renowned warrior (afterwards prince of Condé, and known by the style of *the Great Condé*), that his victories brought on the advantageous treaties of Munster in 1648, between France, the emperor Ferdinand III. and Christina queen of Sweden: See BRITAIN, *United PROVINCES*, &c. Lewis XIV. died in 1715, aged 77.

LEWIS XV. (his great-grandson) succeeded in 1715. He was styled, in the course of his reign, *the well-beloved*, which he lost some years before he died; and was detested and despised by his subjects for his shameful attachment to a *mistress*, who, through her patron the duke d'Aiguillon, governed the kingdom, and invaded the ancient rights and privileges of the people. He died in 1774, in the 64th year of his age and 59th of his reign.

LEWIS XVI. the most unfortunate of his race, and perhaps the most enlightened and virtuous of all the sovereigns of France. He was guillotined 21st January 1793. For an account of his life and character, see the article FRANCE.

LEX, LAW. See LAW.—The Roman laws were of three kinds: 1st, Such as were made by their kings. 2d, The laws of the twelve tables brought by the *Decemviri* from Athens, &c. And, 3d, Such as were proposed by the superior magistrates in the times of the republic. The laws of this last class were enacted in the following manner.

No law could be proposed but by some of the following magistrates, viz. the *prator*, the *consuls*, the *dictator*, the *interrex*, the *decemviri*, the *military tribunes*, *triumviri*, and *tribunes* of the people. If any of these proposed a law, it was first committed to writing, and privately examined as to its utility and probable consequences, by some persons well qualified for the task; sometimes it was referred to the whole senate for their sentiments. It was then hung up publicly for three market days, that all the people might have time to examine it, and consider its tendency: This was called *legis promulgatio, quasi provulgatio*. If the person who framed the bill did not see cause in the mean time to drop it, the people were convened in *comitia*, and he addressed them in an oration, being also seconded by his friends, setting forth the expediency and probable utility of such a law: This was called *rogatio legis*, because the address was always prefaced with this petitionary form of words, *Veliis jubeat sine, Quirites?* "Will you, O Romans, consent and order

this law to pass?" This being done, those that disliked the motion delivered their sentiments in opposition to it. An urn was then brought to certain priests who attended upon the occasion, into which were cast the names of the tribes, centuries, or *curiæ*, as the *comitia* happened to be *tributa, centuriata*, or *curiata*. The names were shaken together; and the first-drawn tribe or century was called *prærogativa*, because their suffrages were first taken. The *curia* that was first drawn was called *principium* for the same reason. The other tribes, centuries, &c. were called *tribus jure vocata, centuræ jure vocatae*, &c.

Matters being in this situation, the *veto* or negative voice of the tribunes of the people might put an entire end to the proceedings, and dissolve the assembly. The tribune's interference was called *intercessio*. The consul also had it in his power to stop further proceedings, by commanding any of the holidays called *feriæ imperatiæ* to be observed. The *comitia* would of course be dissolved also by any of the persons present being seized with the falling sickness, or upon the appearance of any unlucky omen. But supposing the business to meet with no interruption of this sort, the people were each of them presented with two tablets, on one of which was written in large characters A. on the other U. R. Their disapprobation of the bill was expressed by throwing into an urn the tablet inscribed A. signifying "I forbid it;" *antiquo*, "I prefer the old." Their assent was signified by throwing in the tablet marked U. R. i. e. *uti rogas*, "be it as you desire." According to the majority of these tablets the law passed or not. If it passed, it was written upon record, and carried into the treasury; this was called *legem ferre*. Afterwards it was engraved upon plates of brass, and hung up in the most public and conspicuous places: this was termed *legem figere*; and a future repeal of this law was *legem rescire*.

If a law passed in the *comitia curiata*, it was called *lex curiata*; if in the *comitia centuriata*, it had the name of *lex centuriata*; but if it passed in the *comitia tributa*, it was termed *plebiscitum*. The laws, too, generally bore the names of the proposers, as *lex Ælia, lex Fusia*, &c.

Romulus used to make laws by his own single authority, but succeeding kings sought the approbation of the people.

LEXIARCHI, at Athens, six officers assisted by 30 inferior ones, whose business it was to lay fines upon such as came not to the public assemblies, and also to make scrutiny among such as were present.

The lexiarchi kept a register of the age, manners, and abilities of all the citizens, who were always enrolled at the age of 20.

LEXICON, the same with dictionary. The word is chiefly used in speaking of Greek dictionaries: it is derived from the Greek λέξις, *word, diction*; of λέγω *I speak*.

LEXINGTON, a town of North America, and formerly considered as the capital of Kentucky. It stands on the head-waters of Elkhorn river. Here the courts are held, and business regularly conducted. In 1796 it contained about 2000 inhabitants, and several stores, with a good assortment of dry goods. It must have increased since.

LEYDEN, in Latin *Lugdunum Batavorum*, one of the largest and finest cities in Holland, abounds with

Lex
Leyden.

Leyden
||
Lhuys.

canals, along which are rows of lofty trees that afford very pleasant walks. An arm or small branch of the Rhine runs through it. Over the canals are 145 bridges, most of them of stone or brick. The university here is the oldest in the United Provinces: it has large privileges: a library well furnished, and particularly rich in manuscripts; a physic-garden well stocked with all sorts of plants, many of which have been brought from the Cape of Good Hope and the East Indies; an anatomy-hall, well provided with skeletons; and an observatory. The professors, who are generally very eminent, read public lectures four times a-week, for which they take no money, but about three guineas are paid for a course of private lectures, which lasts a whole year. The students have no distinct habit, but all wear swords, though they generally go to the public and private lectures in their night-gowns and slippers. The salaries of the professors are from 100l. to 200l. a-year: they wear gowns only when they preside at public disputations, read public lectures, or meet in the senate; and their lectures are always in Latin. The students do not lodge in the university, but where they please in the town. The cloth manufacture here is much decayed, which formerly flourished to such a degree, that 100,000 pieces, it is said, have sometimes been made in a year. The city is famous for the long and severe siege it maintained in 1573 against the Spaniards. We cannot help mentioning the reply of that illustrious magistrate, Adrian de Vers, when the citizens represented to him the havoc made by the famine during the siege, and insisted upon his surrendering: "Friends (said he), here is my body, divide it among you to satisfy your hunger, but banish all thoughts of surrendering to the cruel and perfidious Spaniards." They took his advice, in regard to their not surrendering, and never would listen to any overtures; but told the Spaniards, they would hold out as long as they had one arm to eat and another to fight. There are some fine churches here, and many long, broad, handsome streets; but the Papists, as at Haerlem, are more numerous than the Protestants.

LEYDEN Phial, a phial coated on the inside and outside with tin-foil, or other proper conducting substance, and furnished with a brass wire and knob, for giving the electrical shock. See *ELECTRICITY Index*.

Lucas Van LEYDEN. See *LUCAS*.

LEYSERA, a genus of plants belonging to the syn-genesia class; and in the natural method ranking under the 49th order, *Compositæ*. See *BOTANY Index*.

LEYTE, one of the Philippine islands in the East Indies, situated in E. Long. 118. 0. N. Lat. 11. 0. Its greatest length is about 40 leagues, and its circumference about 90 or 100. Its soil on the east side is very fruitful; but there are very high mountains which cut it almost through the middle, and occasion so great an alteration in the air, that when it is winter on the north side, it is summer on the southern part of the island. Thus when the inhabitants of one half of the island reap, the others sow; and they have two plentiful harvests in a year, to which the rivers running down from the above-mentioned mountains contribute not a little. The island contains about 9000 inhabitants, who pay tribute to the Spaniards in rice, wax, and quilts.

LHUYD, or *LHOYD*, *Humphrey*, a learned anti-

quarian of the 16th century, born at Denbigh, who applied himself to the study of physic; and living mostly within the walls of Denbigh castle, practised there as a physician; and died in 1570, with the character of a well-bred gentleman. He wrote and translated several pieces relative to history and antiquities; in particular, *The history of Cambria, now called Wales, from Caradoc of Llangearvan, &c.* but died before it was finished: however, Sir Henry Sidney, lord president of Wales, employed Dr David Powel to finish it, who published it in 1584. A new and improved edition of this work was published in 1774.

LHUYD, Edward, keeper of the museum at Oxford, was a native of South Wales, the son of Charles Lhuys, Esq. of Lhanvorde. He was educated at Jesus College, Oxford, where he was created M. A. July 21. 1701. He was bred under Dr Plot, whom he succeeded as keeper of the Ashmolean museum, and had the use of all Vaughan's collection. With incessant labour and great exactness he employed a considerable part of his life in searching into the Welsh antiquities; had perused or collected a great deal of ancient and valuable matter from their MSS.; transcribed all the old charters of the monasteries that he could meet with; travelled several times over Wales, Cornwall, Scotland, Ireland, Armoric Bretagne, countries inhabited by the same people; compared their antiquities, and made observations on the whole; but died in July 1709, before he had digested them into the form of a discourse, as he intended, on the ancient inhabitants of this island. The untimely death of this excellent antiquary prevented the completing of many admirable designs. For want of proper encouragement, he did very little towards understanding the British bards, having seen but one of those of the sixth century, and not being able to procure access to two of the principal libraries in the country. He communicated many observations to Bishop Gibson, whose edition of the *Britannia* he revised; and published "*Archeologia Britannica*, giving some account additional to what has been hitherto published of the languages, histories, and customs, of the original inhabitants of Great Britain, from collection and observations in travels through Wales, Cornwall, Bas Bretagne, Ireland, and Scotland, vol. i. Glossography, Oxford 1707," fol. He left in MS. a Scottish or Irish-English Dictionary, proposed to be published in 1732 by subscription, by Mr David Malcolme, a minister of the church of Scotland, with additions; as also the Elements of the said language; with necessary and useful informations for propagating more effectually the English language, and for promoting the knowledge of the ancient Scottish or Irish, and very many branches of useful and curious learning. Lhuys, at the end of his preface to the *Archeologia*, promises an historical dictionary of British persons and places mentioned in ancient records. It seems to have been ready for press, though he could not set the time of publication. His collections for a second volume, which was to give an account of the antiquities, monuments, &c. in the principality of Wales, were numerous and well chosen; but, on account of a quarrel between him and Dr Wynne, then fellow, afterwards principal of the college, and bishop of St Asaph, he refused to buy them, and they were purchased by Sir Thomas Seabright, of Beachwood in Hertfordshire, in whose library the greatest

Lhuys.

Libanius
||
Libation.

greatest part still remain, but so indigested, and written with so many abbreviations, that nobody can undertake to publish them. They consist of about 40 volumes in folio, 10 in quarto, and above 100 smaller, and all relate to Irish or Welsh antiquities, and chiefly in those languages. Carte made extracts from them about or before 1736; but these were chiefly historical. Sir John Seabright has given Mr Pennant 23 of Lhuyd's MSS. Latin and English. Many of his letters to Lister, and other learned contemporaries, were given by Dr Fothergill to the university of Oxford, and are now in the Ashmolean museum. Lhuyd undertook more for illustrating this part of the kingdom than any one man besides ever did, or than any one man can be equal to.

LIBANIUS, a famous Greek rhetorician and sophist in the 4th century, was born at Antioch, and had a great share in the friendship of Julian the Apostate. That prince offered him the dignity of *praefectus pretorio*; but Libanius refused it, thinking the name of *sophist*, or *professor of eloquence*, much more honourable. There are still extant several of his letters and Greek orations, by which he acquired great reputation: but his style is somewhat affected and obscure. He was a Pagan. Basil and Chrysostom were his disciples about the year 360. His letters were published at Amsterdam in 1738; his orations at Venice, 1755.

LIBANOMANTIA, in antiquity, a species of divination performed with frankincense; which, if it presently caught fire, and sent forth a grateful odour, was esteemed a happy omen, and *vice versa*.

LIBANUS, the name of a chain of mountains of Turkey in Asia, which lie between Proper Syria and Palestine, extending, from west to east, from the Mediterranean sea as far as Arabia. The summits of these mountains are so high, that they are always covered with snow; but below are very pleasant and fruitful valleys. They were formerly famous for the great number of cedar trees growing thereon; but now there are very few remaining. Geographers distinguish this chain into Libanus and Antilibanus; the latter of which lies on the south side of the valley, rising near the ruins of Sidon, and terminates at others in Arabia, in N. Lat. 34. They are separated from each other at an equal distance throughout, and form a basin, or country, called by the ancients *Calo-Syria*.

LIBATION, amongst the Greeks and Romans, was an essential part of solemn sacrifices. It was also performed alone, as a drink-offering, by way of procuring the protection and favour of the gods, in the ordinary affairs of life. Libations, according to the different natures of the gods in honour of whom they were made, consisted of different liquids, but wine was the most usual. The wine offered to the gods was always unmix'd with water. We meet with libations of water, libations of honey, libations of milk, and libations of oil; these are called *νηφάλια ἕρα*. The libation was made with a serious deportment and solemn prayer. At sacrifices, the libation, after it had been tasted by the priest, and handed to the bystanders, was poured upon the victim. At entertainments, a little wine was generally poured out of the cup, before the

liquor began to circulate, to show their gratitude to the gods for the blessings they enjoyed.

Libations were also in use among the Hebrews, who poured a kind of wine on the victim after it was killed, and the several pieces of the sacrifice were laid on the altar, ready to be consumed in the flames.

LIBAW, a sea-port town of Courland, lying on the Baltic sea, consisting entirely of wooden houses. It belongs to the duke of Courland, and is situated in E. Long. 21. 27. N. Lat. 56. 27.

LIBEL, (*libellus famosus*), taken in its largest and most extensive sense, signifies any writing, picture, or the like, of an immoral or illegal tendency; but, in a peculiar sense, is used to denote a malicious defamation of any person, and especially a magistrate, made public by either, printing, writing, signs or pictures, in order to provoke him to wrath, or expose him to public hatred, contempt, and ridicule. The direct tendency of these libels is the breach of the public peace, by stirring up the objects of them to revenge, and perhaps to bloodshed. The communication of a libel to any one person is a publication in the eye of the law: and therefore the sending an abusive private letter to a man is as much a libel as if it were openly printed, for it equally tends to a breach of the peace.

With regard to libels in general, there are, as in many other cases, two remedies; one by indictment, and another by action. The former for the public offence; for every libel has a tendency to break the peace, or provoke others to break it: which offence is the same whether the matter contained be true or false; and therefore the defendant, on an indictment for publishing a libel, is not allowed to allege the truth of it by way of justification. But in the remedy by action on the case, which is to repair the party in damages for the injury done him, the defendant may, as for words spoken, justify the truth of the facts, and show that the plaintiff has received no injury at all. What was said with regard to words spoken, will also hold in every particular with regard to libels by writing or printing, and the civil actions consequent thereupon: but as to signs or pictures, it seems necessary always to show, by proper innuendos and averments of the defendant's meaning, the import and application of the scandal, and that some special damage has followed; otherwise it cannot appear, that such libel by picture was understood to be levelled at the plaintiff, or that it was attended with any actionable consequences.

In a civil action, then, a libel must appear to be false, as well as scandalous; for, if the charge be true, the plaintiff has received no private injury, and has no ground to demand a compensation for himself, whatever offence it may be against the public peace: and therefore, upon a civil action, the truth of the accusation may be pleaded in bar of the suit. But, in a criminal prosecution, the tendency which all libels have to create animosities, and to disturb the public peace, is the sole consideration of the law. And therefore, in such prosecutions, the only points to be considered are, first, the making or publishing of the book or writing; and, secondly, whether the matter be criminal: and, if both these points are against the defendant, the offence against the public is

Libaw,
Libel.

Libella
||
Libel.

complete. The punishment of such libellers, for either making, repeating, printing, or publishing the libel, is a fine, and such corporal punishment as the court in its discretion shall inflict; regarding the quantity of the offence, and the quality of the offender. By the law of the twelve tables at Rome, libels, which affected the reputation of another, were made a capital offence: but, before the reign of Augustus, the punishment became corporal only. Under the emperor Valentinian it was again made capital, not only to write, but to publish, or even to omit destroying them. Our law, in this and many other respects, corresponds rather with the middle age of Roman jurisprudence, when liberty, learning, and humanity, were in their full vigour, than with the cruel edicts that were established in the dark and tyrannical ages of the ancient decemviri, or the latter emperors.

In this, and other instances, where blasphemous, immoral, treasonable, schismatical, seditious, or scandalous libels are punished by the English law, some with a greater, others with a less degree of severity, the *liberty of the press*, properly understood, is by no means infringed or violated. See *LIBERTY of the Press*.

LIBELLA, a piece of money amongst the Romans, being the tenth part of the denarius, and equal in value to the as. It was called *libella*, as being a little pound, because equal to a pound of brass.—Its value in our money is 1 ob. 1 qu. or a halfpenny farthing. See *MONEY*.

LIBELLA, or *Libellula*, a genus of four-winged flies, called in English *dragon-flies* or *adder-flies*. See *ENTOMOLOGY Index*.

LIBELLI, was the name given to the bills which were put up amongst the Romans, giving notice of the time when a show of gladiators would be exhibited, with the number of combatants, and other circumstances. This was called *munus pronunciare* or *proponere*.—These bills were sometimes termed *edicta*. These public notices were given by the person who designed to oblige the people with the show, and were frequently attended with pictures representing the engagement of some celebrated gladiators. This custom is alluded to by Horace, lib. ii. sat. vii. 96. &c.

There was also the *famosus libellus*, a defamatory libel. Seneca calls them *contumeliosus libelli*, infamous rhymes, which by a Roman ordinance were punishable with death. Libellus also in the civil law signifies the declaration, or state of the prosecutor's charge against the defendant; and it has the like signification in our spiritual courts.

LIBER, in vegetables, the bark or rind, principally of trees. This is to be conceived as consisting of a number of cylindric and concentric surfaces whose texture is reticular, and in some trees plainly extrusible every way, by reason that the fibres are soft and flexible. While in this condition, they are either hollow regular canals, or, if not so, they have interstitial spaces which serve the office of canals. The nutritious juice which they are continually receiving, remains in part in them, makes them grow in length and thickness, and strengthens and brings them closer together; and by this means the texture which was before reticular becomes an assemblage of straight fibres ranged vertically and parallel to each other; that is, as they are thus al-

tered behind one another, they by degrees become a new substance, more woody, called *blea*.

LIBERA, in *Mythology*, the name of a goddess, which Cicero, in his book Of the Gods, represents as the daughter of Jupiter and Ceres. Ovid in his *Fasts* says that the name was given by Bacchus to Ariadne.

Libera is exhibited on medals as a kind of female Bacchus, crowned with vine leaves.

LIBERAL ARTS, are such as depend more on the labour of the mind than on that of the hands; or, that consist more in speculation than operation; and have a greater regard to amusement and curiosity than to necessity.

The word comes from the Latin *liberalis*, which among the Romans signified a person who was not a slave; and whose will, of consequence, was not checked by the command of any master.

Such are grammar, rhetoric, painting, sculpture, architecture, music, &c. The liberal arts used formerly to be summed up in the following Latin verse:

Lingua, Tropus, Ratio, Numerus, Tonus, Angulus, Astra.

And the mechanical arts, which, however, are innumerable, under this:

Rus, Nemus, Arma, Faber, Vulnera, Lana, Rates.

See *ARTS*.

LIBERALIA, feasts celebrated by the ancient Romans, in honour of Liber or Bacchus, the same with those which the Greeks called *DIONYSIA*, and *Dionysiaca*.

They took their name from *liber*, i. e. *free*, a title conferred on Bacchus in memory of the liberty or freedom which he granted to the people of Bœotia; or, perhaps, because wine, whereof he was the reputed deity, delivers men from care, and sets their mind at ease and freedom. Varro derives the name of this feast from *liber*, considered as a noun adjective, and signifying *free*; because the priests were free from their function, and eased of all care, during the time of the liberalia: as the old women officiated in the ceremonies and sacrifices of these feasts.

LIBERIA, in Roman antiquity, a festival observed on the 16th of the kalends of April, at which time the youth laid aside their juvenile habit for the toga virilis, or habit peculiar to grown men. See the article *TOGA*.

LIBERTINES, **LIBERTINI**, in ecclesiastical history, a religious sect, which arose in the year 1525, whose principal tenets were, that the Deity was the sole operating cause in the mind of man, and the immediate author of all human actions; that, consequently, the distinctions of good and evil, which had been established with regard to those actions, were false and groundless, and that men could not, properly speaking, commit sin; that religion consisted in the union of the spirit or rational soul with the Supreme Being; that all those who had attained this happy union, by sublime contemplation and elevation of mind, were then allowed to indulge, without exception or restraint, their appetites or passions; that all their actions and pursuits were then perfectly innocent; and that, after the death of the body, they were to be united to the Deity. They likewise said that Jesus Christ was nothing but a mere *je ne sçai quoi*, composed of the spirit of God, and of the opinion of men.

These maxims occasioned their being called *Libertines*;

Libera
||
Libertines.

Libertines // *Liberty.* *lines*; and the word has been used in an ill sense ever since.

The *Libertini* spread principally in Holland and Brabant. Their leaders were one Quintin, a Picard, Pockefius, Rufius, and another called Chopin, who joined with Quintin, and became his disciple.

This sect obtained a certain footing in France through the favour and protection of Margaret, queen of Navarre, and sister to Francis I. and found patrons in several of the reformed churches. This sect was probably a remnant of the more ancient Beguards or Brethren of the Free Spirit.

LIBERTINES of Geneva, were a cabal of rakes rather than of fanatics; for they made no pretences to any religious system, but pleaded only for the liberty of leading voluptuous and immoral lives. This cabal was composed of a certain number of licentious citizens, who could not bear the severe discipline of Calvin, who punished with rigour not only dissolute manners, but also whatever bore the aspect of irreligion and impiety. In this turbulent cabal there were several persons who were not only notorious for their dissolute and scandalous manner of living, but also for their atheistical impiety, and contempt of all religion. To this odious class belonged one Gruet, who denied the divinity of the Christian religion, the immortality of the soul, the difference between moral good and evil, and rejected with disdain the doctrines that are held most sacred among Christians; for which impieties he was at last brought before the civil tribunal, in the year 1550, and condemned to death. The Genevan spirit of reformation, improperly directed by the violence and zeal of Calvin, did at this time operate to a degree which has marked the character of this great reformer with reproach. For in 1544, Sebastian Castalio, master of the public school at Geneva, who was a man of probity, and distinguished by his learning and taste, was, nevertheless, deposed from his office and banished the city, because he disapproved some of the measures that were pursued and some of the opinions entertained by Calvin and his colleagues, and particularly that of absolute and unconditional predestination. Jerome Bolsec also, a man of genius and learning, who became a convert to the Protestant religion and fled to Geneva for protection, was cast into prison, and soon after sent into banishment, because, in 1551, he imprudently and indecently declaimed, in full congregation and at the close of public worship, against the doctrine of absolute decrees.

LIBERTUS, or *LIBERTINUS*, among the Romans, a freedman, or a person set free from a legal servitude.

These still retained some mark of their ancient state: he who made a slave free having a right of patronage over the *libertus*: so that if the latter failed of showing due respect to his patron, he was restored to his servitude; and if the *libertus* died without children, his patron was his heir. See *SLAVE*.

In the beginning of the republic, *libertinus* denoted the son of a *libertus* or freedman; but afterwards, before the time of Cicero, and under the emperors, the terms *libertus* and *libertinus*, as Suetonius has remarked, were used as synonymous.

LIBERTY, denotes a state of freedom, in contra-

distinction to *slavery* or *restraint*; and may be considered as either *natural* or *civil*. *Liberty.*

The absolute rights of man, considered as a free agent, endowed with discernment to know good from evil, and with power of choosing those measures which appear to him to be most desirable, are usually summed up in one general appellation, and denominated the *natural liberty of mankind*. This natural liberty consists properly in a power of acting as one thinks fit, without any restraint or controul, unless by the law of nature; being a right inherent in us by birth, and one of the gifts of God to man at his creation, when he endued him with the faculty of free-will. But every man, when he enters into society, gives up a part of his natural liberty, as the price of so valuable a purchase; and, in consideration of receiving the advantages of mutual commerce, obliges himself to conform to those laws which the community has thought proper to establish. And this species of legal obedience and conformity is infinitely more desirable than that wild and savage liberty which is sacrificed to obtain it. For no man, that considers a moment, would wish to retain the absolute and uncontrouled power of doing whatever he pleases: the consequence of which is, that every other man would also have the same power; and then there would be no security to individuals in any of the enjoyments of life.

Political, therefore, or *civil* liberty, which is that of a member of society, is no other than natural liberty, so far restrained by human laws (and no farther) as is necessary and expedient for the general advantage of the public. Hence we may collect, that the law, which restrains a man from doing mischief to his fellow-citizens, though it diminishes the natural, increases the civil liberty of mankind: but every wanton and causeless restraint of the will of the subject, whether practised by a monarch, a nobility, or a popular assembly, is a degree of tyranny. Nay, that even laws themselves, whether made with or without our consent, if they regulate and constrain our conduct in matters of mere indifference, without any good end in view, are laws destructive of liberty: whereas, if any public advantage can arise from observing such precepts, the controul of our private inclinations, in one or two particular points, will conduce to preserve our general freedom in others of more importance, by supporting that state of society which alone can secure our independence. Thus the statute of King Edward IV. which forbade the fine gentlemen of those times (under the degree of a lord) to wear pikes upon their shoes or boots of more than two inches in length, was a law that favoured of oppression; because, however ridiculous the fashion then in use might appear, the restraining it by pecuniary penalties could serve no purpose of common utility. But the statute of King Charles II. which prescribes a thing seemingly as indifferent, viz. a dress for the dead, who were all ordered to be buried in woollen, is a law consistent with public liberty; for it encourages the staple trade, on which in great measure depends the universal good of the nation. So that laws, when prudently framed, are by no means subversive, but rather introductive, of liberty; for (as Mr Locke has well observed) where there is no law there

Liberty.

there is no freedom. But then, on the other hand, that constitution or frame of government, that system of laws, is alone calculated to maintain civil liberty, which leaves the subject entire master of his own conduct, except in those points wherein the public good requires some direction or restraint.

The idea and practice of this political or civil liberty, flourish in their highest vigour in these kingdoms, where it falls little short of perfection, and can only be lost or destroyed by the folly or demerits of its owner; the legislature, and of course the laws of Britain, being peculiarly adapted to the preservation of this inestimable blessing even in the meanest subject. Very different from the modern constitutions of other states on the continent of Europe, and from the genius of the imperial law; which in general are calculated to vest an arbitrary and despotic power, of controuling the actions of the subject, in the prince, or in a few grandees. And this spirit of liberty is so deeply implanted in our constitution, and rooted even in our very soil, that a slave or a negro, the moment he lands in Britain, falls under the protection of the laws, and so far becomes a freeman; though the master's right to his service may possibly still continue.

The absolute rights of every Briton (which, taken in a political and extensive sense, are usually called their *liberties*), as they are founded on nature and reason, so they are coeval with our form of government; though subject at times to fluctuate and change, their establishment (excellent as it is) being still human. At some times we have seen them depressed by overbearing and tyrannical princes; at others, so luxuriant as even to tend to anarchy, a worse state than tyranny itself, as any government is better than none at all. But the vigour of our free constitution has always delivered the nation from these embarrassments: and, as soon as the convulsions consequent on the struggle have been over, the balance of our rights and liberties has settled to its proper level; and their fundamental articles have been from time to time asserted in parliament, as often as they were thought to be in danger:

Blackst.
Comment.

First, By the great charter of liberties, which was obtained, sword in hand, from King John, and afterwards, with some alterations, confirmed in parliament by King Henry III. his son. Which charter contained very few new grants; but, as Sir Edward Coke observes, was for the most part declaratory of the principal grounds of the fundamental laws of England. Afterwards, by the statute called *confirmatio cartarum*, whereby the great charter is directed to be allowed as the common law; all judgements contrary to it are declared void; copies of it are ordered to be sent to all cathedral churches, and read twice a-year to the people; and sentence of excommunication is directed to be as constantly denounced against all those that by word, deed, or counsel, act contrary thereto, or in any degree infringe it. Next, By a multitude of subsequent corroborating statutes (Sir Edward Coke reckons 32), from the first Edward to Henry IV. Then, after a long interval, by the *petition of right*; which was a parliamentary declaration of the liberties of the people, asserted by King Charles I. in the beginning of his reign. Which was closely followed by the still more ample concessions made by that unhappy prince to his

Liberty.

parliament, before the fatal rupture between them; and by the many salutary laws, particularly the *Habeas corpus act*, passed under Charles II. To these succeeded the *bill of rights*, or declaration delivered by the lords and commons to the prince and princess of Orange, 13th February 1688; and afterwards enacted in parliament, when they became king and queen; which declaration concludes in these remarkable words; "and they do claim, demand, and insist upon, all and singular the premises, as their undoubted rights and liberties." And the act of parliament itself recognises "all and singular the rights and liberties asserted and claimed in the said declaration to be the true, ancient, and indubitable rights of the people of this kingdom." Lastly, These liberties were again asserted at the commencement of the present century, in the *act of settlement*, whereby the crown was limited to his present majesty's illustrious house: and some new provisions were added, at the same fortunate era, for better securing our religion, laws, and liberties; which the statute declares to be "the birthright of the people of England," according to the ancient doctrine of the common law.

Thus much for the *declaration* of our rights and liberties. The rights themselves, thus defined by these several statutes, consist in a number of private immunities; which will appear, from what has been premised, to be indeed no other, than either that *residuum* of natural liberty, which is not required by the laws of society to be sacrificed to public convenience; or else those civil privileges, which society hath engaged to provide, in lieu of the natural liberties so given up by individuals. These therefore were formerly, either by inheritance or purchase, the rights of all mankind; but, in most other countries of the world, being now more or less debased and destroyed, they at present may be said to remain, in a peculiar and emphatical manner, the rights of the people of Britain. And these may be reduced to three principal or primary articles; the right of personal security, the right of personal liberty, and the right of private property: because, as there is no other known method of compulsion, or of abridging man's natural free-will, but by an infringement or diminution of one or other of these important rights, the preservation of these inviolate may justly be said to include the preservation of our civil immunities in their largest and most extensive sense. See the article RIGHTS.

In vain, however, would these rights be declared, ascertained, and protected by the dead letter of the laws, if the constitution had provided no other method to secure their actual enjoyment. It has therefore established certain other auxiliary subordinate rights of the subject, which serve principally as barriers to protect and maintain inviolate the three great and primary rights, of personal security, personal liberty, and private property. These are,

1. The constitution, powers, and privileges of parliament; for which see PARLIAMENT.

2. The limitation of the king's prerogative, by bounds so certain and notorious, that it is impossible he should exceed them without the consent of the people; as to which, see PREROGATIVE. The former of these keeps the legislative power in due health and vigour, so as to make it improbable that laws should

be enacted destructive of general liberty: the latter is a guard upon the executive power, by restraining it from acting either beyond or in contradiction to the laws that are framed and established by the other.

3. A third subordinate right of every Briton is that of applying to the courts of justice for redress of injuries. Since the law is, in this realm, the supreme arbiter of every man's life, liberty, and property, courts of justice must at all times be open to the subject, and the law be duly administered therein. The emphatical words of *magna charta*, spoken in the person of the king, who in judgement of law (says Sir Edward Coke) is ever present and repeating them in all his courts, are these: *Nulli vendemus, nulli negabimus, aut differemus rectum vel justitiam*; "and therefore every subject (continues the same learned author), for injury done to him *in bonis, in terris, vel persona*, by any other subject, be he ecclesiastical or temporal, without any exception, may take his remedy by the course of the law, and have justice and right for the injury done to him, freely without sale, fully without any denial, and speedily without delay. It were endless to enumerate all the *affirmative* acts of parliament, wherein justice is directed to be done according to the law of the land: and what that law is, every subject knows, or may know if he pleases: for it depends not upon the arbitrary will of any judge; but is permanent, fixed, and unchangeable, unless by authority of parliament. We shall however just mention a few *negative* statutes, whereby abuses, perversions, or delays of justice, especially by the prerogative, are restrained. It is ordained by *magna charta*, that no freeman shall be outlawed, that is, put out of the protection and benefit of the laws, but according to the law of the land. By 2 Edw. III. c. 8. and 11 Ric. II. c. 10. it is enacted, that no commands or letters shall be sent under the great seal, or the little seal, the signet or privy seal, in disturbance of the law; or to disturb or delay common right: and, though such commandments should come, the judges shall not cease to do right: which is also made a part of their oath by statute 18 Edw. III. stat. 4. And by 1 W. and M. st. 2. c. 2. it is declared, that the pretended power of suspending or dispensing with laws, or the execution of laws, by regal authority without consent of parliament, is illegal.

Not only the substantial part, or judicial decisions, of the law, but also the formal part, or method of proceeding, cannot be altered but by parliament: for, if once those outworks were demolished, there would be an inlet to all manner of innovation in the body of the law itself. The king, it is true, may erect new courts of justice; but then they must proceed according to the old established forms of the common law. For which reason it is declared in the statute 16 Car. I. c. 10. upon the dissolution of the court of star-chamber, that neither his majesty, nor his privy-council, have any jurisdiction, power, or authority, by English bill, petition, articles, libel, (which were the course of proceeding in the star-chamber, borrowed from the civil law), or by any other arbitrary way whatsoever, to examine, or draw into question, determine, or dispose of the lands or goods of any subjects of this kingdom; but that the same ought to be tried and deter-

mined in the ordinary courts of justice, and by *course of law*.

4. If there should happen any uncommon injury, or infringement of the rights before mentioned, which the ordinary course of law is too defective to reach, there still remains a fourth subordinate right, appertaining to every individual, namely, the right of petitioning the king, or either house of parliament, for the redress of grievances. In Russia we are told that the czar Peter established a law, that no subject might petition the throne till he had first petitioned two different ministers of state. In case he obtained justice from neither, he might then present a third petition to the prince; but upon pain of death, if found to be in the wrong. The consequence of which was, that no one dared to offer such third petition; and grievances seldom falling under the notice of the sovereign, he had little opportunity to redress them. The restrictions, for some there are, which are laid upon petitioning in Britain, are of a nature extremely different; and while they promote the spirit of peace, they are no check upon that of liberty. Care only must be taken, lest, under the pretence of petitioning, the subject be guilty of any riot or tumult; as happened in the opening of the memorable parliament in 1640; and, to prevent this, it is provided by the statute 13 Car. II. st. 1. c. 5. that no petition to the king, or either house of parliament, for any alteration in church or state, shall be signed by above 20 persons, unless the matter thereof be approved by three justices of the peace, or the major part of the grand jury, in the country; and in London, by the lord mayor, aldermen, and common-council: nor shall any petition be presented by more than 10 persons at a time. But, under these regulations, it is declared by the statute 1 W. and M. st. 2. c. 2. that the subject hath a right to petition; and that all commitments and prosecutions for such petitioning are illegal.

5. The fifth and last auxiliary right of the subject, that we shall at present mention, is that of having arms for their defence, suitable to their condition and degree, and such as are allowed by law. Which is also declared by the same statute 1 W. and M. st. 2. c. 2. and is indeed a public allowance, under due restrictions, of the natural right of resistance and self-preservation, when the sanctions of society and laws are found insufficient to restrain the violence of oppression.

In these several articles consist the rights, or, as they are frequently termed, *the liberties of Britons*: liberties more generally talked of than thoroughly understood; and yet highly necessary to be perfectly known and considered by every man of rank or property, lest his ignorance of the points whereon they are founded should hurry him into faction and licentiousness on the one hand, or a pusillanimous indolence and criminal submission on the other. And we have seen that these rights consist, primarily, in the free enjoyment of personal security, of personal liberty, and of private property. So long as these remain inviolate, the subject is perfectly free; for every species of compulsive tyranny and oppression must act in opposition to one or other of these rights, having no other object upon which it can possibly be employed.

Liberty.

To preserve these from violation, it is necessary that the constitution of parliaments be supported in its full vigour; and limits, certainly known, be set to the royal prerogative. And, lastly, To vindicate these rights, when actually violated or attacked, the subjects of Britain are entitled, in the first place, to the regular administration and free course of justice in the courts of law; next, to the right of petitioning the king and parliament for redress of grievances; and, lastly, to the right of having and using arms for self-preservation and defence. And all these rights and liberties it is our birthright to enjoy entire; unless where the laws of our country have laid them under necessary restraints. Restraints in themselves so gentle and moderate, as will appear upon farther inquiry, that no man of sense or probity would wish to see them slackened. For all of us have it in our choice to do every thing that a good man would desire to do; and are restrained from nothing, but what would be pernicious either to ourselves or our fellow-citizens. So that this review of our situation may fully justify the observation of a learned French author, who indeed generally both thought and wrote in the spirit of genuine freedom; and who hath not scrupled to profess, even in the very bosom of his native country, that the British is the only nation in the world where political or civil liberty is the direct end of its constitution. Recommending, therefore, to the student in our laws a farther and more accurate search into this extensive and important title, we shall close our remarks upon it with the expiring wish of the famous Father Paul to his country, "ESTO PERPETUA!"

LIBERTY and Necessity. See METAPHYSICS.

LIBERTY of the Press. The art of printing, soon after its introduction, was looked upon in England, as well as in other countries, as merely a matter of state, and subject to the coercion of the crown. It was therefore regulated with us by the king's proclamations, prohibitions, charters of privilege and license, and finally by the decrees of the court of star-chamber, which limited the number of printers, and of presses which each should employ, and prohibited new publications unless previously approved by proper licensers. On the demolition of this odious jurisdiction in 1641, the long parliament of Charles I. after their rupture with that prince, assumed the same powers as the star-chamber had exercised with respect to the licensing of books: and in 1643, 1647, 1649, and 1652 (Scobell. i. 44, 134. ii. 88, 230.) issued their ordinances for that purpose, founded principally on the star-chamber decree of 1637. In 1662 was passed the statute 13 and 14 Car. II. c. 33. which, with some few alterations, was copied from the parliamentary ordinances. This act expired in 1679; but was revived by statute 1 Jac. II. c. 17. and continued till 1692. It was then continued for two years longer by statute 4 W. and M. c. 24. but though frequent attempts were made by the government to revive it in the subsequent part of that reign, (Com. Journ. 11 Feb. 1694, 26 Nov. 1695, 22 Oct. 1696, 9 Feb. 1697, 31 Jan. 1698), yet the parliament resisted it so strongly, that it finally expired, and the press became properly free in 1694, and has continued so ever since.

The liberty of the press, however, so essential to

the nature of a free state, consists not in freedom from censure for any criminal matter that may be published, but in laying no previous restraints upon publications. Every freeman has undoubtedly a right to say what sentiments he pleases before the public; to forbid this, is to destroy the freedom of the press: but if he publishes what is improper, mischievous, or illegal, he must take the consequence of his own temerity*. To subject the press to the restrictive power of a licenser in the manner above mentioned, is to subject all freedom of sentiment to the prejudices of one man, and make him the arbitrary and infallible judge of all controverted points in learning, religion, and government. But to punish (as the law does at present) any dangerous or offensive writings which, when published, shall, on a fair and impartial trial, be adjudged of a pernicious tendency, is necessary for the preservation of peace and good order, of government and religion, the only solid foundations of civil liberty. Thus the will of individuals is still left free; the abuse only of that free will is the object of legal punishment. Neither is any restraint hereby laid upon freedom of thought or inquiry; liberty of private sentiment is still left; the disseminating or making public of bad sentiments, destructive of the ends of society, is the crime which society corrects. A man (says a fine writer on this subject) may be allowed to keep poisons in his closet, but not publicly to vend them as cordials. And to this we may add, that the only plausible argument heretofore used for restraining the just freedom of the press, "that it was necessary to prevent the daily abuse of it," will entirely lose its force, when it is shown (by a seasonable exertion of the laws) that the press cannot be abused to any bad purpose without incurring a suitable punishment: whereas it can never be used to any good one when under the controul of an inspector. So true will it be found, that to censure the licentiousness, is to maintain the liberty of the press.

LIBERTY, in *Mythology*, was a goddess both among the Greeks and Romans. Among the former she was invoked under the title *Eleutheria*; and by the latter she was called *Libertas*, and held in singular veneration. Temples, altars, and statues, were erected in honour of this deity. A very magnificent temple was consecrated to her on Mount Aventine, by Tiberius Gracchus, before which was a spacious court, called *atrium libertatis*. The Romans also erected a new temple in honour of Liberty, when Julius Cæsar established his empire over them, as if their liberty had been secured by an event which proved fatal to it. In a medal of Brutus, Liberty is exhibited under the figure of a woman, holding in one hand a cap, the symbol of liberty, and two poniards in the other, with the inscription *IDIVS MARTIIS*.

LIBETHRA, in *Ancient Geography*, the fountain of song, was situated in Magnesia, a district of Macedonia annexed to Thessaly; distinct from the town of Libethra, which stood on Mount Olympus, where it verges towards Macedonia: hence the muses are called *Libethrides*, (Virgil). Strabo places on Helicon, not only Hippocrene, and the temple of the Muses, but also the cave of the nymphs Libethrides.

LIBETHRIUS mons, in *Ancient Geography*, a mountain of Bœotia, distant from Coronea 40 stadia; where

Liberty
&
Libethria

* See Libe

where stood the statues of the Muses, and of the nymphs surnamed *Libethrides*: a mountain probably conjoined with, or at least very near to, Helicon.

LIBITINA, in the Roman mythology, a goddess which presided over funerals. This goddess was the same with the *Venus infera* or *Epithymia* of the Greeks. She had a temple at Rome, where was lodged a certain piece of money for every person who died, whose name was recorded in a register called *Libitinae ratio*. This practice was established by Servius Tullius, in order to obtain an account of the number of annual deaths in the city of Rome, and consequently the rate of increase or decrease of its inhabitants.

LIBITINARI, were undertakers whose office it was to take care of funerals, prepare all things necessary upon this solemn occasion, and furnish every article required.—They got their livelihood by this gloomy business, and kept a number of servants to perform the working part of the profession, such as the *polliniflores*, *vespillones*, &c. The name *Libitinarum* is derived from *Libitina*, the goddess of funerals, in whose temple were sold all things relating to funerals. See **FUNERAL**.

LIBNA, in *Ancient Geography*, a sacerdotal city in the tribe of Judah, a place of strength, as appears from Sennacherib's laying siege to it, 2 Kings xix. Isaiah xxxvii. In Jerome's time, a village, called *Lobna*, in the territory of Eleutheropolis.

LIBOURNE, a town of France, in Guienne, and in Bourdeleois. It is a populous trading town, and is seated on the river Dordogne. W. Long. o. 10. N. Lat. 44. 45.

LIBRA, or **BALANCE**, one of the mechanical powers. See **BALANCE**.

LIBRA, in *Astronomy*, one of the 12 signs of the zodiac, and exactly opposite to Aries; so called because when the sun is in this sign at the autumnal equinox, the days and nights are equal as if weighed in a balance.—The stars in this constellation according to Ptolemy are 17, Tycho 10, Hevelius 20, and Flamstead 51.

LIBRA also denotes the ancient Roman pound, borrowed from the Sicilians, who called it *lira*.

The libra was divided into 12 *uncia* or ounces, and the ounce into 24 scruples.

The divisions of the libra were, the *uncia*, one twelfth; the *sextans*, one sixth; the *quadrans*, one fourth; the *triens*, one third; the *quincunx*, five ounces; the *semis*, six; the *septunx*, seven; the *bes*, eight; the *drans*, nine; the *dextrans*, ten; the *deunx*, eleven; lastly, the *as* weighed twelve ounces or one libra.

The Roman libra was used in France for the proportions of their coin till the time of Charlemagne, or perhaps till that of Philip I. in 1093, their sols being so proportioned, as that 20 of them were equal to the libra. By degrees it became a term of account: and every thing of the value of twenty sols was called a *livre*.

LIBRA pенса, in our law books, denotes a pound of money in weight. It was usual in former days not only to tell the money but to weigh it: because many cities, lords, and bishops, having their mints, coined money, and often very bad too; for which reason, though the pound consisted of 20 shillings, they always weighed it.

LIBRARII, among the ancients, were a sort of copyists who transcribed in beautiful or at least legible characters, what had been written by the notarii in notes and abbreviations.

Librarii,
Library.

LIBRARY, an edifice or apartment destined for holding a considerable number of books placed regularly on shelves; or the books themselves lodged in it.

Some authors refer the origin of libraries to the Hebrews; and observe, that the care these took for the preservation of their sacred books, and the memory of what concerned the actions of their ancestors, became an example to other nations, particularly to the Egyptians. Osmanduas, king of Egypt, is said to have taken the hint first; who, according to Diodorus, had a library built in his palace, with this inscription over the door, $\Upsilon\chi\iota\iota\varsigma\ \text{IATPEION}$. Nor were the Ptolemies, who reigned in the same country, less curious and magnificent in books.

The Scripture also speaks of a library of the kings of Persia, Ezra v. 17. vi. 1. which some imagine to have consisted of the historians of that nation, and of memoirs of the affairs of state; but, in effect, it appears rather to have been a depository of laws, charters, and ordinances of the kings. The Hebrew text calls it the *house of treasures*, and afterwards the *house of the rolls*, where the treasures were laid up. We may, with more justice, call that a *library*, mentioned in the second of Esdras to have been built by Nehemiah, and in which were preserved the books of the prophets, and of David, and the letters of their kings.

The first who erected a library at Athens was the tyrant Pisistratus; and yet Strabo refers the honour of it to Aristotle. That of Pisistratus was transported by Xerxes into Persia, and was afterwards brought back by Seleucus Nicanor to Athens. Long after, it was plundered by Sylla, and re-established by Hadrian. Plutarch says, that under Eumenes there was a library at Pergamus, containing 200,000 books. Tyrannion, a celebrated grammarian, contemporary with Pompey, had a library of 30,000 volumes. That of Ptolemy Philadelphus, according to A. Gellius, contained 700,000, all in rolls, burnt by Cæsar's soldiers.

Constantine, and his successors, erected a magnificent one at Constantinople; which in the eighth century contained 300,000 volumes, all burnt by order of Leo Isaurus; and, among the rest, one wherein the Iliad and Odyssey were written in letters of gold, on the guts of a serpent.

The most celebrated libraries of ancient Rome, were the Ulpian, and the Palatine. They also boast much of the libraries of Paulus Æmilius, who conquered Perseus; of Lucilius Lucullus, of Asinius Pollio, Atticus, Julius Severus, Domitius Serenus, Pamphilus Martyr, and the emperors Gordian and Trajan.

Anciently, every large church had its library; as appears by the writings of St Jerome, Anastasius, and others. Pope Nicholas laid the first foundation of that of the Vatican, in 1450. It was destroyed by the constable Bourbon, in the sacking of Rome, and restored by Pope Sixtus V. and has been considerably enriched with the ruins of that of Heidelberg, plundered by Count Tilly in 1622. One of the most complete libraries in Europe, was said to be that erected at Florence by Cosimo de Medicis, over the gate whereof is written **LABOR ABSQUE LABORE**; though it is now

Library. exceeded by that of the French king, begun by Francis I. augmented by Cardinal Richelieu, and completed by M. Colbert.

The emperor's library at Vienna, according to Lambecius, consists of 80,000 volumes, and 15,940 curious medals.

The Bodleian library at Oxford, built on the foundation of that of Duke Humphry, exceeds that of any university in Europe, and even those of all the sovereigns of Europe, except the emperor's and French king's, which are each of them older by 100 years. It was first opened in 1602, and has since found a great number of benefactors; particularly Sir Robert Cotton, Sir H. Savil, Archbishop Laud, Sir Kenelm Digby, Mr Allen, Dr Pococke, Mr Selden, and others. The Vatican, the Medicean, that of Bellarion at Venice, and those just mentioned, exceed the Bodleian in Greek manuscripts: which yet outdoes them all in Oriental manuscripts.

As to printed books, the Ambrosian at Milan, and that of Wolfenbuttle, are two of the most famous, and yet both inferior to the Bodleian.

King's LIBRARY, at St James's, was founded by Henry, eldest son of James I. and made up partly of books, and partly of manuscripts, with many other curiosities, for the advancement of learning. It has received many additions from the libraries of Isaac Casaubon and others.

Cottonian LIBRARY, originally consisted of 958 volumes of original charters, grants, instruments, letters of sovereign princes, transactions between this and other kingdoms and states, genealogies, histories, registers of monasteries, remains of Saxon laws, the book of Genesis, thought to be the most ancient Greek copy extant, and said to have been written by Origen in the second century, and the curious Alexandrian copy or manuscript in Greek capitals. This library is kept in the British Museum, with the large and valuable library of Sir Hans Sloane, amounting to upwards of 42,000 volumes, &c. There are many public libraries belonging to the several colleges at Oxford and Cambridge, and the universities in North Britain. The principal public libraries in London, beside that of the Museum, are those of the College of Heralds, of the College of Physicians, of Doctors Commons, to which every bishop, at the time of his consecration, gives at least 20l. sometimes 50l. for the purchase of books; those of Gray's Inn, Lincoln's Inn, Inner Temple, and Middle Temple; that of Lambeth, founded by Archbishop Bancroft in 1610, for the use of succeeding archbishops of Canterbury, and increased by the benefactions of Archbishops Abbot, Sheldon, and Tennison, and said to consist of at least 15,000 printed books, and 617 volumes in manuscript; that of Red-Cross street, founded by Dr Daniel Williams, a Presbyterian divine, and since enriched by many private benefactions; that of the Royal Society, called the *Arundelian* or *Norfolk library*, because the principal part of the collection formerly belonged to the family of Arundel, and was given to the society by Henry Howard, afterwards duke of Norfolk, in 1666, which library has been increased by the valuable collection of Francis Aston, Esq. in 1715, and is continually increasing by the numerous benefactions of the works of its learned mem-

bers, and others: that of St Paul's, of Sion college; the Queen's library, erected by Queen Caroline in 1737; and the Surgeons library, kept in their hall in the Old Bailey, &c.

Libration
||
Libra.

In Edinburgh there is a good library belonging to the university, well furnished with books; which are kept in good order. There is also a noble library of books and manuscripts belonging to the faculty of advocates. See *ADVOCATE*. The library belonging to the society of writers to the signet, although of less extent, yet in the judicious selection of the best books, and the best editions, which by the attention of the society are now kept in excellent order, is inferior to none in the kingdom.

LIBRATION, in *Astronomy*, an apparent irregularity of the moon's motion, whereby she seems to librate about her axis, sometimes from the east to the west, and now and then from the west to the east. See *ASTRONOMY Index*.

LIBURNIA, in *Ancient Geography*, a district of Illyricum, extending towards the Adriatic between Istria on the west, Dalmatia on the east, and Mount Albius on the north. *Liburni*, the people. The apparitors, who at the command of the magistrate summoned the people from the country, were called *Liburni*, because generally men of *Liburnia*.—*Liburna*, or *Liburnica*, (Horace), denoted a kind of light and swift skiff, used by the Liburnians in their sea-roving or piracies, for which they were noted. *Liburnum* (Juvenal), was a species of litter made in form of Liburnian skiffs, wherein the noblemen of Rome were carried, and where they sat at their ease, either reading or writing.

LIBURNUS, in *Ancient Geography*, a mountain of Campania. Also a port of Tuscany. Now *Livorna*, or *Leghorn*. E. Long. 11. N. Lat. 43. 30.

LIBYA, in general, according to the Greeks, denoted Africa. An appellation derived from *lub*, "thirst," being a dry and thirsty country. See *AFRICA*.

LIBYA, in a more restrained sense, was the middle part of Africa, extending north and west, (Pliny); between the Mediterranean to the north, and Ethiopia to the east: and was twofold, the *Hither* or *Exterior Libya*; and the *Farther* or *Interior*. The former lay between the Mediterranean on the north, and the *Farther Libya* and Ethiopia beyond Egypt on the south, (Ptolemy). The *Farther* or *Interior Libya* was a vast country, lying between the *Hither Libya* on the north, the Atlantic ocean on the west, the Ethiopic on the south, and Ethiopia beyond Egypt on the east, (Ptolemy).

LIBYA, in a still more restrained sense, called, for distinction's sake, *Libya Propria*, was a northern district of Africa, and a part of the *Hither Libya*; situated between Egypt to the east, the Mediterranean to the north, the Syrtis Major and the Regio Tripolitana to the west, the Garamantes and Ethiopia beyond Egypt to the south. Now the kingdom and desert of *Barca*. This Libya was again subdivided into *Libya* taken in the strictest sense of all, and into Marmarica and Cyrenaica. *Libya* in the strictest sense, otherwise the *Exterior*, was the most eastern part of *Libya Propria*, next to Egypt, with Marmarica on the west, the Mediterranean on the north, and the Nubi, now called *Nubia*, to the south, (Ptolemy).

LICENSE.

Licence
||
Licinius.

LICENSE, in *Law*, an authority given to a person to do some lawful act.

LICENSER OF BOOKS, has been an officer in almost every civilized country, till the close of the last century, when it was abolished in Great Britain. It has been proved by Beckmann, that such an office was established, not only in the Roman empire, but also in the republic and the states of Greece. All the copies of the works of Protagoras which could be procured, were burnt at Athens by the public crier, and the satirical works of Labienus shared the same fate under the reign of the emperor Augustus. Not long after the invention of printing, laws were enacted for subjecting books to examination; a regulation which was proposed even by Plato, and which many have since wished for. It appears that the liberty of the press is only a modern privilege, and that it has not been enjoyed in its utmost latitude in any country but Great Britain.

LICENSER of the Press. See *LIBERTY of the Press.*

LICENTIATE, one who has obtained the degree of a license.—The greatest number of the officers of justice in Spain are distinguished by no other title than that of *licentiate*. In order to pass *licentiate* in common law, civil law, and physic, they must have studied seven years, and in divinity ten. Among us a *licentiate* usually means a physician who has a license to practise, granted by the college of physicians.

LICETUS, a celebrated physician of Italy, was born at Rappollo, in the state of Genoa, 1577. He came, it seems, into the world, before his mother had completed the seventh month of her pregnancy; but his father, being an ingenious physician, wrapped him up in cotton, and nurtured him so, that he lived to be 77 years of age. He was trained with great care, and became a very distinguished man in his profession; and was the author of a great number of works: his book *De Monstris* every body must have heard of. He was professor of philosophy and physic at Padua, where he died in 1655.

LICHEN, LIVERWORT, a genus of plants belonging to the natural order of algae, in the cryptogamia class. See *BOTANY Index.*

LICHFIELD. See *LITCHFIELD.*

LICHTENBERG, a castle of France, in Lower Alsace, and the chief place of a county of the same name; seated on a rock, near the mountains Vosges, and looked upon as impregnable. E. Long. 7. 35. N. Lat. 48. 55.

LICHTENBURG, a town of Germany, in the circle of Franconia, and margravate of Cullembach. E. Long. 12. 0. N. Lat. 50. 26.

LICHTENFELS, a town of Germany, in the circle of Franconia, and bishopric of Bamberg, seated on the river Mayne, in E. Long. 11. 10. N. Lat. 50. 20.

LICHTENSTEIN, a town of Switzerland, in Tockerberg, seated on the river Thour. E. Long. 2. 15. N. Lat. 47. 25.

LICHTSTALL, a handsome town of Switzerland, in the county of Basil; seated on the river Ergetz, in E. Long. 7. 57. N. Lat. 47. 40.

LICINIUS SROLO, a famous Roman tribune, styled *Stolo* on account of a law he made, while tribune, that no Roman citizen should possess more than 500 acres of land; alleging, that when they occupied more,

they could not cultivate it with care, nor pull up the useless shoots (*stolones*) that grow from the roots of trees. He is memorable also for enacting, that one of the consuls should always be of a plebeian family. He lived about 362 B. C.

LICNON, in the Dionysian solemnities, the mystical van of Bacchus; a thing so essential to all the solemnities of this god, that they could not be duly celebrated without it. See *DIONYSIA.*

LICNOPHORI, in the Dionysian solemnities, those who carried the licnon.

LICOLA, or **LAGO DI LICOLA**, a lake in the kingdom of Naples, formerly famous for plenty of excellent fish; but in the year 1538 an explosion of a volcano changed one part of it into a mountain of ashes, and the other into a morass. It was anciently known by the name of the Lucrine lake.

LICONIA, a genus of plants belonging to the pentandria class. See *BOTANY Index.*

LICTORS, among the Romans, were officers established by Romulus, who always attended the chief magistrates when they appeared in public.

The duty of their office consisted in the three following particulars: 1. *Submotio*, or clearing the way for the magistrate they attended: this they did by word of mouth; or, if there was occasion, by using the rods they always carried along with them. 2. *Animadversio*, or causing the people to pay the usual respect to the magistrate, as to alight, if on horseback, or in a chariot; to rise up, uncover, make way, and the like. 3. *Pre-ritio*, or walking before the magistrates: this they did not confusedly, or altogether, nor by two or three abreast, but singly, following one another in a straight line. They also preceded the triumphal car in public triumphs; and it was also part of their office to arrest criminals, and to be public executioners in beheading, &c. Their ensigns were the *FASCES* and *SECURIS*.

As to the number of lictors allowed each magistrate, a dictator had twenty-four, a master of the horse six, a consul twelve, a prætor six; and each vestal virgin, when she appeared abroad, had one.

LIDD. See *LYDD.*

LIDDEL, DR DUNCAN, professor of mathematics and of medicine in the university of Helmstadt, was born in the year 1561 at Aberdeen, where he received the first part of his education in languages and philosophy. About the age of eighteen he repaired to the university of Francfort, where he spent three years in a diligent application to mathematics and philosophy. From Francfort he proceeded to Wratzlaw, or Breslaw, in Silesia, where he is said to have made uncommon progress in his favourite study of mathematics, under the direction of a very eminent professor, Paulus Wittichius. Having studied at Breslaw for the space of one year, he returned to Francfort and remained there three years, paying the most intense application to the study of physic. A contagious distemper having broken out at that place, the students were dispersed, and Liddel retired to the university of Rostock. Here he renewed his studies, rather as a companion than as a pupil of the celebrated Brucæus, who, though an excellent mathematician, did not scruple to confess that he was instructed by Liddel in the more perfect knowledge of the Copernican system, and other astronomical questions. In 1590 he returned once more to Francfort. But having there heard of the increasing

Licnon
||
Liddel.

Liddel.
Lidford.Lidköping
||
Lie.

creasing reputation of the Academia Julia, established at Helmstadt by Henry duke of Brunswick, Mr Liddel removed thither; and soon after his arrival was appointed to the first or lower professorship of mathematics. From thence he was promoted to the second and more dignified mathematical chair, which he occupied for nine years, with much credit to himself and to the Julian Academy. In 1596 he obtained the degree of M. D. was admitted a member of that faculty, and began publicly to teach physic. By his teaching and his writings he was the chief support of the medical school at Helmstadt; was employed as first physician at the court of Brunswick, and had much practice among the principal inhabitants of that country. Having been several times elected dean of the faculties both of philosophy and physic, he had in the year 1604 the honour of being chosen prorektor of the university. But neither academical honours, nor the profits of an extensive practice abroad, could make Dr Liddel forget his native country. In the year 1600 he took a final leave of the Academia Julia; and after travelling for some time through Germany and Italy, he at length settled in Scotland. He died in the year 1613, in the 52d year of his age. By his last will he bestowed certain lands purchased by him near Aberdeen upon the university there, in all time coming, for the education and support of six poor scholars. Among a variety of regulations and injunctions for the management of this charity, he appoints the magistrates of Aberdeen his trustees, and solemnly denounces the curse of God on any person who shall abuse or misapply it. His works are, 1. *Disputationes Medicinales, Helmstadt, 1603, 4to.* 2. *Ars Medica succinè et perspicuè explicata, Hamburgi, 1627, 8vo.* This performance is dedicated to King James VI. and is divided into five books, viz. *Introductio in totam Medicinam; De Physiologia; De Pathologia; De Signorum doctrina; De Therapeutica.* 3. *De Febribus Libri tres, Hamburgi, 1610, 12mo.* 4. *Tractatus de dente aureo, Hamburgi, 1628, 12mo.* This last performance Dr Liddel published in order to refute a ridiculous story then current, of a poor boy in Silesia, who, at seven years of age, having lost some of his teeth, brought forth, to the astonishment of his parents, a new tooth of pure gold. Jacobus Horstius, doctor and professor of medicine in the *Academia Julia*, at the same time with our author, had published a book, which he dedicated to the emperor Rudolphus II. to prove that this wonderful tooth was a prodigy sent from heaven to encourage the Germans then at war with the Turks, and foretelling, from this golden tooth, the future victories of the Christians, with the final destruction of the Turkish empire and Mahometan faith, and a return of the golden age in 1700, preparatory to the end of the world. The imposture was soon after discovered to be a thin plate of gold, skilfully drawn over the natural tooth by an artist of that country, with a view to excite the public admiration and charity. 5. *Artis conservandi Sanitatem, libri duo, Aberdoniæ, 1651, 12mo;* a posthumous work.

LIDFORD, a village of Devonshire in England, situated on the river Lid, two or three miles east of Brent Tor, was formerly a famous town, with a castle. It was much destroyed by the Danes in 997. The village is now small, but the lands in the parish are rich and fertile, the whole forest of Dartmore being in the

verge of it. The river here being pent up at the bridge with rocks, has made itself so deep a fall, that the noise of the water only is heard without being seen.

LIDKOPING, a town of West Gothland in Sweden, seated on the lake Wenar, in E. Long. 13. 40. N. Lat. 58. 25.

LIDNEY, a town of Gloucestershire in England, 71 miles from London, is seated on the west bank of the river Severn. In the neighbourhood are the remains of a large Roman encampment, with foundations of many ancient buildings, among which are the ruins of a Roman hypocaust of an oval form; and Roman antiquities and coins are often found. Mr Bathurst has a fine seat here called *Sydney-Park*, in the midst of extensive woods.

LIE, in morals, denotes a criminal breach of veracity.—Archdeacon Paley, in treating of this subject, observes, that there are falsehoods which are not lies; that is, which are not criminal: and there are lies which are not literally and directly false.

I. Cases of the first class are those, 1. Where no one is deceived: as, for instance in parables, fables, novels, jests, tales to create mirth, or ludicrous embellishments of a story, in which the declared design of the speaker is not to inform, but to divert; compliments in the subscription of a letter; a prisoner's pleading not guilty; an advocate asserting the justice, or his belief of the justice, of his client's cause. In such instance no confidence is destroyed, because none was reposed; no promise to speak the truth is violated, because none was given or understood to be given. 2. Where the person you speak to has no right to know the truth, or more properly where little or no inconveniency results from the want of confidence in such cases; as where you tell a falsehood to a madman for his own advantage; to a robber, to conceal your property; to an assassin, to defeat or to divert him from his purpose. It is upon this principle, that, by the laws of war, it is allowed to deceive an enemy by feints, false colours, spies, false intelligence, and the like; but, by no means, in treaties, truces, signals of capitulation, or surrender: and the difference is, that the former suppose hostilities to continue, the latter are calculated to terminate or suspend them.

Many people indulge in serious discourse a habit of fiction and exaggeration, in the accounts they give of themselves, of their acquaintance, or of the extraordinary things which they have seen or heard; and so long as the facts they relate are indifferent, and their narratives though false are inoffensive, it may seem a superstitious regard to truth to censure them merely for truth's sake. Yet the practice ought to be checked: for, in the first place, it is almost impossible to pronounce beforehand, with certainty, concerning any lie, that it is inoffensive; or to say what ill consequences may result from a lie apparently inoffensive: And, in the next place, the habit, when once formed, is easily extended to serve the designs of malice or interest; like all habits, it spreads indeed of itself. Pious frauds, as they are improperly enough called, pretended inspirations, forged books, counterfeit miracles, are impositions of a more serious nature. It is possible that they may sometimes, though seldom, have been set up and encouraged with a design to do good: but the good they aim at requires that the belief of them should

Liechtenau. Liege. should be perpetual, which is hardly possible; and the detection of the fraud is sure to disparage the credit of all pretensions of the same nature. Christianity has suffered more injury from this cause than from all other causes put together.

II. As there may be falsehoods which are not lies, so there may be lies without literal or direct falsehood. An opening is always left for this species of prevarication, when the literal and grammatical signification of a sentence is different from the popular and customary meaning. It is the wilful deceit that makes the lie; and we wilfully deceive, when our expressions are not true, in the sense in which we believe the hearer apprehends them. Besides, it is absurd to contend for any sense of words, in opposition to usage; for all senses of all words are founded upon usage, and upon nothing else. Or a man may act a lie; as by pointing his finger in a wrong direction, when a traveller inquires of him his road; or when a tradesman shuts up his windows, to induce his creditors to believe that he is abroad: for to all moral purposes, and therefore as to veracity, speech and action are the same; speech being only a mode of action.

LIECHTENAU, a town of Germany, in the circle of Franconia and margravate of Anspach, subject to Nuremberg. E. Long. 9. 5. N. Lat. 48. 43.

LIEGE (*Ligius*), in Law, properly signifies a vassal, who holds a kind of fee, that binds him in a closer obligation to his lord than other people.

The term seems to be derived from the French *lier*, “to bind;” on account of a ceremony used in rendering faith or homage: which was by locking the vassal’s thumb or his hand in that of the lord, to show that he was fast bound by his oath of fidelity. Cujas, Vigenere, and Bignon, choose rather to derive the word from the same source with *leudis* or *leodi*, “loyal, faithful.” But Du Cange falls in with the opinion of those who derive it from *liii*, a kind of vassals, so firmly attached to their lord, on account of lands or

fees held of him, that they were obliged to do him all manner of service, as if they were his domestics. He adds, this was formerly called *ligium servitium*, and the person *lige*. In this sense, the word is used, Leg. Edw. cap. 29. *Judei sub tutela regis ligea debent esse*; that is, wholly under his protection.

By liege homage, the vassal was obliged to serve his lord towards all, and against all, excepting his father. In which sense, the word was used in opposition to simple homage; which last only obliged the vassal to pay the rights and accustomed dues to his lord; and not to bear arms against the emperor, prince, or other superior lord: so that a liege man was a person wholly devoted to his lord, and entirely under his command. *Omnibus, &c. Reginaldus, rex Insularum, salutem. Sciatis quod deveni homo ligeus domini regis Anglie Johannis, contra omnes mortales, quamdiu vixero; et inde ei fidelitatem et sacramentum prestavi, &c.* MS. penes W. Dugdale.

But it must be observed, there were formerly two kinds of liege homage: the one, by which the vassal was obliged to serve his lord, against all, without exception even of his sovereign; the other, by which he was to serve him against all, except such other lords as he had formerly owed liege homage to.

In our old statutes lieges, and liege people, are terms peculiarly appropriated to the king’s subjects; as being *liges*, *ligi*, or *ligati*, obliged to pay allegiance to him; 8 Henry VI. 14 Hen. VIII. &c. though private persons had their lieges too. *Reinaldus, Dei gratia, abbas Ramesie, preposito et hominibus de Brancestre, et omnibus vicinis Francis et Anglis salutem. Sciatis me dedisse terram Ulfe, in depedene (hodie depedale) huic Boselino, et uxori ejus Alfnie—ea conditione quod effecti sint homines legis.* Lib. Rames.

LIEGE-Poultie, in Scots Law, is opposed to death-bed; and signifies a person’s enjoying that state of health in which only he can dispose of his property at pleasure.
